Supplemental Figure 1. Values are raw mean (± SEM) likings at baseline and T1. NE corresponds to the flavor associated with the NE beverage. HE corresponds to the flavor associated with the HE beverage. Liking score may vary between 1 and 5. In the 2-exposure group, children were exposed 2 times to each beverage; in the 7-exposure group, 7 times.
**Supplemental Figure 2.** Values are raw mean (± SEM) energy intakes during the meals following the consumption of HE and NE beverages at baseline and T1. NE corresponds to the intake following the consumption of the NE beverage (0 kcal). HE corresponds to the intake following the consumption of the HE beverage (150 kcal). In the 2-exposure group, children were exposed 2 times to each beverage; in the 7-exposure group, 7 times.
**Supplemental Figure 3.** Values are raw mean (± SEM) hunger ratings measured just before the meals following the consumption of HE and NE beverages at baseline and T1. NE corresponds to the rating following the consumption of the NE beverage (0 kcal). HE corresponds to the rating following the consumption of the HE beverage (150 kcal). Hunger rating score may vary between 1 (high hunger) and 5 (low hunger). In the 2-exposure group, children were exposed 2 times to each beverage; in the 7-exposure group, 7 times.
