Supplemental Figure – Relationship between baseline estimated total daily energy expenditure (TDEE) and body weight in women and men in the Diet and Surgery cohort combined. The equation of the regression line is: $y = 1050 + 13.2 \, x$, $r = 0.95$ in women, and $y = 1555 + 12.3 \, x$, $r = 0.92$ in men. Dotted lines are 95% confidence intervals of individual data.
