Supplementary Figure 2. Quantile-Quantile (QQ) plots of body mass index (BMI) (kg/m squared) by sex and race/ethnicity. For non-Hispanics, data from 1993 to 2012 are used and for Hispanic, data from 2001 to 2012 are used. The black diagonal line is the line of equality (y=x) between the baseline and subsequent years. For non-Hispanics, the baseline year is 1993; for Hispanics, the baseline year is 2001. The vertical dashed lines represent clinical cutoffs for overweight status (BMI ≥ 25kg/m squared) and for obese status (BMI ≥ 30kg/m squared).
