Supplemental Figure 3

The graph depicts the relationship between postmenstrual age (in weeks) and weight (in kg) for different groups. The x-axis represents postmenstrual age, ranging from 27 to 39 weeks, while the y-axis represents weight, ranging from 1 to 4 kg.

Different lines and markers are used to represent different groups:
- Inc–AA/SO
- Inc–AA/SMOF
- Imm–RDI/SO
- Imm–RDI/SMOF

The data points show a trend of increasing weight with increasing postmenstrual age for all groups, with the Inc–AA/SO and Imm–RDI/SO groups having the highest and lowest weights, respectively.
