Supplemental Figure 2
Relationships between absolute changes (8-week minus baseline) in urinary 8-isoprostane concentrations and large VLDL tAUC of triglyceride (upper panel) and cholesterol (lower panel) in all subjects participating in the study. Dietary groups are identified as: Control (○), High LCn3 (□), High polyphenols (■), High polyphenols & LCn3 (△).

Abbreviations: VLDL, very low-density lipoproteins; tAUC, total area under the curve; LCn3, Long-chain n-3 polyunsaturated fatty acids.
