Contents

Papers
Systematic review of next-generation sequencing simulators: computational tools, features and perspectives
Min Zhao, Di Liu and Hong Qu ................................................................. 121

Long noncoding RNAs in gastric cancer carcinogenesis and metastasis
Mojdeh Nasrollahzadeh-Khakiani, Modjtaba Emadi-Baygi, Wolfgang Arthur Schulz and Parvaneh Nikpour ............................................................. 129

A survey on database resources for microRNA-disease relationships
Yingying Wang and Yunpeng Cai ................................................................. 146

Understanding the role of protein interaction motifs in transcriptional regulators: implications for crop improvement
Luis María Vaschetto .................................................................................. 152

Goodbye genome paper, hello genome report: the increasing popularity of ‘genome announcements’ and their impact on science
David Roy Smith ........................................................................................ 156

Applications of the 1000 Genomes Project resources
Xiangqun Zheng-Bradley and Paul Flicek ..................................................... 163

Modeling protein-DNA binding via high-throughput in vitro technologies
Yaron Orenstein and Ron Shamir ................................................................. 171
