Contents

Papers
Circular RNA: an emerging key player in RNA world
Xianwen Meng, Xue Li, Peijing Zhang, Jingjing Wang, Yincong Zhou and Ming Chen ......................... 547

Long non-coding RNAs and complex diseases: from experimental results to computational models
Xing Chen, Chenggang Clarence Yan, Xu Zhang and Zhu-Hong You ....................................................... 558

Computational methods for identifying miRNA sponge interactions
Thuc Duy Le, Junpeng Zhang, Lin Liu and Jiuyong Li ........................................................................ 577

Predicting disease trait with genomic data: a composite kernel approach
Haitao Yang, Shaoyu Li, Hongyan Cao, Chichen Zhang and Yuehua Cui ................................................ 591

Estimation of random effects and identifying heterogeneous genes in meta-analysis of gene expression studies
Umaporn Siangphoe and Kellie J. Archer ............................................................................................. 602

Exploring phenotype patterns of breast cancer within somatic mutations: a modicum in the intrinsic code
Sohiya Yotsukura, Masayuki Karasuyama, Ichigaku Takigawa and Hiroshi Mamitsuka .............................. 619

Embracing an integromic approach to tissue biomarker research in cancer: Perspectives and lessons learned
Gerald Li, Peter Bankhead, Philip D Dunne, Paul G O'Reilly, Jacqueline A James, Manuel Salto-Tellez, Peter W Hamilton and Darragh G McArt ................................................................. 634

Computational prediction of methylation types of covalently modified lysine and arginine residues in proteins
Wankun Deng, Yongbo Wang, Lili Ma, Ying Zhang, Shahid Ullah and Yu Xue ....................................... 647

Structural database resources for biological macromolecules
Luciano A. Abriata ................................................................................................................................. 659

The role of drug profiles as similarity metrics: applications to repurposing, adverse effects detection and drug–drug interactions
Santiago Vilar and George Hripcsak ........................................................................................................ 670

Individualized network-based drug repositioning infrastructure for precision oncology in the panomics era
Feixiong Cheng, Huixiao Hong, Shengyong Yang and Yuquan Wei ....................................................... 682

A comprehensive overview of computational resources to aid in precision genome editing with engineered nucleases
Vinita Periwal ........................................................................................................................................... 698

Dynamic and modular gene regulatory networks drive the development of gametogenesis
Dongxue Che, Yang Wang, Weiyang Bai, Leijie Li, Guiyou Liu, Liangcai Zhang, Yongchun Zuo, Shiheng Tao, Jinlian Hua and Mingzhi Liao .................................................................................. 712

Erratum .................................................................................................................................................. 722
