

Figure S1. Graphic summary of gain- and loss- of miR156 targets sites by alternative donor site in *P. trichocarpa*. The top track shows the gene structure of Potri.013G086800. Each horizontal box and line represent exon and intron, respectively. The long isoform (TCONS\_00091536) contains a miR156g target site, whereas the short isoform is miR156g-insensitive as it does not harbor the miRNA target sites. The magnified region shows the sequence of miRNA target site in the long transcript (indicated with a red box) and
