

Supplement Figure 1. Detection level of target pathways. **A** target pathway level detection by CERNO algorithm on different gene ranking metrics. **B**, target pathway level detection across all tested algorithms. Blue color represents significantly enriched pathway (p-value <5%), red color represents not significantly enriched pathways. **C** heatmap of significantly enriched target pathways (blue color) across tested data sets and algorithms. Red color represents not significantly enriched pathways for particular data set and algorithm.
