Please read these instructions carefully and follow them strictly. In this way you will help ensure that the review and publication of your paper is as efficient and rapid as possible. In particular ensure that your paper is within the specified length limit. The editors reserve the right to return manuscripts that are not prepared in accordance with these instructions.

Scope and policy of CABIOS
CABIOS provides a forum for the exchange of information on the uses of computing in the molecular biosciences. The following categories of paper may be submitted for publication.

First Byte
This section is intended to provide introductory reviews or material that is essentially didactic. It may address any aspect of computer use that impinges on the activities of the life scientist. Authors who wish to submit material for this section are encouraged to contact the editors beforehand.

Reviews (approximately 6 printed pages)
Review papers cover particular aspects of the subject, and most are commissioned. However the editors welcome suggestions from prospective authors who should in the first instance submit a draft outline.

Full papers (maximum 6 printed pages)
Priority is given to papers that describe new algorithms. The diversity of computer systems and the lack of universal standards precludes the widespread application of software-oriented papers.

Communications (maximum 3 printed pages)
This section provides the opportunity for publication of short papers that discuss algorithms or software, but do not warrant publication as full papers. It provides a vehicle for authors who have translated an existing algorithm into a software package on another system.

Applications Notes
This section is for communication of information that is not appropriate for publication as a full paper, but may be useful to other scientists. Descriptions of useful improvements on existing algorithms, applications and implementations are suitable for such a contribution. Other topics may be acceptable; the editors will consider suggestions. Text should be limited to 750 words or less, or 500 words plus one figure. An abstract is not required.

Preparation of manuscripts
The executive editors, in conjunction with the editorial board and other referees will handle the full editorial process. Authors should submit all manuscripts to the appropriate editor as indicated below. News releases and Announcements should also go to the appropriate Editor.

The Americas (USA, Canada and South America), the Pacific Rim and Australasia: Gary D. Stormo, Department of Molecular, Cellular and Developmental Biology, University of Colorado, Boulder, CO 80309-0347, USA.

Europe and the rest of the world: Charles F.A. Bryce, Department of Biological Sciences, Napier University, Colinton Road, Edinburgh, EH10 5DT, UK.

Japan: Minoru Kanehisa, Institute for Chemical Research, Kyoto University, Uji, Kyoto 611, Japan.

Submission of a paper implies that it reports unpublished work, that is under consideration for publication elsewhere and that, if accepted, it will not be published elsewhere in the same form, either in English or in any other language, without the consent of the publisher. If previously published tables, illustrations or more than 200 words of text are to be included, then the copyright holder's written permission must be obtained. Enclose copies of any such permission letters with your paper.

Papers must be clearly and concisely written in English. In the interests of speed, manuscripts are not extensively copy edited and authors are requested to check their texts carefully before submitting them so that proofs will require only correction of typographical errors.

Sections of the manuscript
Please subdivide manuscripts into the following sequence of sections, according to the type of paper.

Full papers
Title page, Abstract, Introduction, System and methods, Algorithm, Implementation, Discussion, References.

Communications
Title page, Abstract, main body of text, References.

Reviews
May be in a format best suited to subject matter, but should include Title page, Abstract, main body of text, References. For clarity the main body of text should be sub-divided into sections.

General format
An original and two copies of the manuscript must be submitted. They should be legibly typed on A4 or American quarto paper. All sections of the manuscript must be double-spaced (space between the lines of type not less than 6 mm). Margins of 25 mm (1 inch) should be left at the sides, top and bottom of each page. Number each page top right (Title page is 1). Please avoid footnotes; use instead, and as sparingly as possible, parenthesis within brackets. Underline only words or letters to appear in italics. Clearly identify unusual or handwritten symbols and Greek letters. Differentiate between the letter O and zero, and the letters I and L and number 1. Mark the position of each figure and table in the margin.

Length of manuscript
The length of the manuscript in printed pages can be calculated as follows: a full page of typeset text is approximately 1000 words; small type for the Acknowledgements, References and Figure legends fills approximately 1500 words per printed page. Also, suitable compensation should be made for tables, figures and equations.

Title page
The title should be short, specific and informative. The surname and initials of each author should be followed by his/her department, institution, city with postal code and country. Any changes of address may be added to the footnotes. The author to whom reprint requests are to be sent should be indicated by an asterisk and the footnote "To whom reprint requests should be sent". Please provide a running head of not more than 50 characters. Up to five key words should be supplied to assist with the compilation of the annual Subject Index.

Abstract
The second page of every manuscript must contain the Abstract, which should be a single paragraph of 200 words (full papers and reviews) or 100 words (communications). The Abstract should be comprehensible to readers before they have read the paper and abbreviations and reference citations should be avoided.

Introduction
The Introduction should be brief but cover the field of the paper, describing previous work and establishing the background for the algorithm/program that is being reported.

System and methods
This section is the formal equivalent of a 'Materials and methods' section. It should include precise details of the hardware and software that is in use, including version numbers and release dates. It is not sufficient to state the language. Special enhancements and additions should be described in detail, particularly if they are designed 'on site' and are otherwise unpublished. Suppliers should be indicated where relevant. Other methods, including biological methods, should be described in full.

Algorithm
The algorithm section describes the theoretical background to the particular application. If this has been described previously, especially with relevance to the biosciences, it is sufficient to provide a brief description and appropriate citations. Short sections of clear, well annotated code are acceptable if they clarify a particular point. These should be prepared as a figure to avoid typesetting errors.
Implementation

This section should describe the implementation of the algorithm on the particular system. Examples of the user interface, i.e. input and output, should be included. Photographs of the VDU screen are acceptable if they make a particular point. Some indication of running times and other constraints (e.g. size of database) should be included where applicable. The performance of the software should be compared with that of other packages that are generally available. If the program uses data, then trial data and examples of results should be included to permit other users to test the software.

Discussion

The discussion section should describe the applicability of the technique and other uses for which it can be employed. Authors are encouraged to discuss important features/constraints that they perceive in their system/software.

References

Authors are responsible for the accuracy of the References. Published articles and those in the press (state the journal which has accepted them) may be included. In the text a reference should be cited by author and date; not more than two authors may be cited per reference; if there are more than two authors use et al. References must not be numbered. At the end of the manuscript the citations should be typed in alphabetical order, with the authors' surnames and initials inverted. References should include, in the following order: authors' names, year, paper title, journal title, volume number and inclusive page numbers. The name of the journal should be abbreviated according to the World List of Scientific Periodicals. Book references should also include the editors and the name and address of the publisher. References should therefore be listed as follows:

Personal communications (J. Smith, personal communication) should be authorized by those involved in writing, and unpublished data should be cited as (unpublished data). Both should be used as sparingly as possible and only when the unpublished data referred to is peripheral rather than central to the discussion. References to manuscripts in preparation or submitted, but not yet accepted, should be cited in the text as: (B. Smith and N. Jones, in preparation) and should NOT be included in the list of references.

Acknowledgements

These should be included at the end of the text and not in footnotes.

Tables

Tables should be typed on separate sheets and numbered consecutively with Roman numerals. Tables should be self-explanatory and include a brief descriptive title. Footnotes to tables indicated by lower case letters are acceptable, but they should not include extensive experimental detail. An arrow in the text margin should be used to indicate where a table should be inserted in the text.

Illustrations

All illustrations (line drawings and photographs) should be referred to in the text as Figure 1 etc., which should be abbreviated to 'Fig.' only in the figure legend. Write the title of your paper, the name of the first author, and the figure number lightly in blue pencil on the back of each figure. On the back also indicate clearly the top margin of each figure. On the manuscript indicate with an arrow in the margin the most appropriate position for the figure.

Photographs. These must be submitted in the desired final size so that reduction can be avoided. The type area of a page is 240 (height) × 179 mm (width) and photographs, including their legends, must not exceed this area. A single column is 86 mm wide. A double column is 179 mm wide. Ideally, photographs should fit either a single or a double column. Photographs should be of sufficiently high quality with respect to detail, contrast and fineness of grain to withstand the inevitable loss of contrast and detail inherent in the printing process.

Colour plates. Inclusion of colour plates is subject to a special charge.

Line drawings. Please provide these as clear, sharp prints, suitable for reproduction as submitted. No additional artwork, redrawing or typesetting is done. Therefore, all labelling should preferably be made with a lettering set. Ensure that the size of lettering is in proportion with the overall dimensions of the drawing. Ideally, line drawings should be submitted in the desired final size to avoid reduction (maximum dimensions 240 × 179 mm including legends) and should fit either a single (86 mm) or a double column width (179 mm). Computer listings should normally be presented in a single column format (width 86 mm), which means a field width of around 50 characters. In general low resolution (draft mode) dot matrix output does not reproduce well and should be avoided at all possible. If it is essential to include such material use a new ribbon and good quality paper, aiming for high contrast and sharpness. If submitting line drawings which require reduction, please check that the lettering will be clearly legible after the drawing has been reduced to the size at which it will be printed. After reduction, letters should not be smaller than 1.5 mm in height.

Figure legends. These should be on a separate, numbered manuscript sheet. Define all symbols and abbreviations used in the figure. Common abbreviations and others used in the preceding text should not be redefined in the legend.

Conventions

In general, the journal follows the conventions of the CBE Style Manual (Council of Biology Editors, Bethesda, MD, 1983, 5th edn).

Follow Chemical Abstracts and its indexes for chemical names. For guidance in the use of biochemical terminology follow the recommendations issued by the IUPAC-IUB Commission on Biochemical Nomenclature, as given in Biochemical Nomenclature and Related Documents, published by the Biochemical Society, UK. For enzymes, use the recommended name assigned by the IUPAC-IUB Committee on Biochemical Nomenclature, 1978, as given in Enzyme Nomenclature, published by Academic Press, New York, 1980. Where possible, use the recommended SI (Systeme Internationale) units.

Genotypes should be italicized (underline in typed copy); phenotypes should not be italicized. For bacterial genetics nomenclature follow Denner et al. (1966) Genetics, 54, 61–76.

Abbreviations

Try to restrict the use of abbreviations to SI symbols and those recommended by the IUPAC. Abbreviations should be defined in brackets after their first mention in the text. Standard units of measurements and chemical symbols of elements may be used without definition in the body of the paper.

Chemical formulae and mathematical equations

Wherever possible, write mathematical equations and chemical formulae on a single line. Please submit complex chemical structures as figures.

Electronic mail

Authors are encouraged to use electronic mail for the correspondence that surrounds the processing of a manuscript. Include a full electronic mail address on the title page of the manuscript if at all possible. Additionally authors may choose to notify the appropriate Editor that a manuscript has been despatched, or to contact the Editor or publisher for a progress report on their manuscript.

The electronic addresses are:

G.D. Stormo: STORMOG@BOULDER.COLORADO.EDU

A.H. Fielding: DB9DA00QSA.CS.MMU.AC.UK

Production Office: JOHNSOS@OUP.CO.UK

Page charges

Page charges are not levied.

Proofs

Authors are sent page proofs. To avoid delays in publication, proofs should be checked immediately for typographical errors and returned to the publishers by express (special delivery) post. Alternatively, to save time, corrections may be given by telephone to The Production Editor (CABIOS), Oxford University Press, Tel: (0865) 56767; Fax: (0865) 267773. A charge is made to authors who insist on amendment within the text at the page-proof stage.
CABIOS ELECTRONIC SUBMISSION OF MANUSCRIPTS

The word processing packages listed below are acceptable for translation and publication in CABIOS. We strongly advise authors to retain the former version until the updated package appears below.

- Ability (Amstrad)
- DEC WPS8 (DECmate III)
- DiscWrite
- DisplayWrite
- Dragonfly
- Euroscript
- EinsteinWriter
- Framework
- Locoscript (Amstrad versions 1 and 2)
- Lotus 1
- MacWrite
- Microsoft Word (All PC based to version 5, and version 4 Macintosh*)
- Multimate
- New Word
- NBI
- PCWrite
- Q & A Write
- Scientext
- Smart 3
- Sprint
- Tedi
- VuWriter
- Volkswriter
- 1st Word
- Waterlooscript
- Window-write
- Wordcraft
- WordPerfect
- Wordstar
- Wordstar 2000
- Xywrite
- Xerox

• Users of Macintosh Microsoft Word 4.0 and later should transfer into MS DOS format by using the SAVE AS function, clicking on FILE FORMAT and selecting MS DOS.

Important notes
Following these instructions will ensure that authors’ manuscripts are processed as rapidly as possible and that the introduction of errors is minimized. However, all manuscripts will undergo some editorial modification so it is important to read the proofs carefully.

The manuscript
Please ensure that the manuscript on the disk appears in the following order:

Title
Authors
Addresses
Abstract
Introduction
System and methods
Algorithm
Discussion
Acknowledgements
References
Appendix
Figure legends
Tables
Running title

• Use carriage returns to end headings and paragraphs only, not to rearrange lines or introduce space between headings and paragraphs.
• Displayed equations will still be manually typeset. Please replace such equations, on the disk only, with the wording ‘Insert equation n’.
• Please list and cite References as near to CABIOS style as possible (see ‘Instructions to authors’).
• Text should be typed unjustified and without hyphenation (except for compound words).
• Do not use automatic page numbering or running heads, please number the hard copy by hand.
• Do not use lower case ‘l’ (ell) for 1 (one) or ‘O’ for 0 (zero) as they have different electronic values.
• Check the final copy carefully because spelling mistakes, inconsistencies, and errors will be faithfully translated to the typeset version. In the case of a mismatch between disk and hard copy the latter will be taken as the definitive version.

The disk
• Save the text as a single word processor file. If you have the facility to save the text as an ASCII file make a copy in this format also. Do not save any software on the disk.
• Do not include any copyright material on the disk as this can create difficulties with Customs clearance.
• Label the disk with the first-named author, and the software and hardware used.
• Ensure that the disk is properly protected from X-ray or physical damage.
• Manuscripts on disk must also be accompanied by three hard copies, these may be used to typeset the paper conventionally if there is a problem with the disk.
CABIOS DISK SUBMITTAL FORM

This form must accompany your revised manuscript. Please fill in as much of the form as you can, it will greatly help with the processing of your paper.

Return to: Journals Marketing Department (FF4), Oxford University Press, Walton Street, Oxford OX2 6DP, UK or Fax +44 (0) 865 267782 and we'll do the rest!
Protein Engineering maintains its position as the premier journal for original research in this exciting field, read throughout the world for the currency of its contents.

From 1994 the journal is published monthly, bringing the latest findings to the research community faster than ever before.

Manuscripts will still undergo rigorous scrutiny by the distinguished international editorial board, and presentation and production standards will retain the same superb quality that has won the journal a wide audience.

The journal focuses on full-length original research papers which advance understanding of the structural and biochemical basis of protein function.

Included are:
* investigations of how particular structural features relate to the mechanisms through which their biological function is expressed
* empirical testing of these relationships by the introduction of specific changes and evaluation of any altered structural or functional properties

Specialized areas of investigation include:
* determination and prediction of protein conformation
* experimental studies of protein folding
* chemical modification
* mutagenesis (generalized and site-specific)
* physical and biochemical methods for establishing structure-activity relationships
* analysis and simulation of protein conformation

Volume 7 1994 12 issues
Personal subscriptions: £80/US$140
(Please note: Excluding rates apply in Europe, US$ elsewhere)

Would you like to receive a FREE SAMPLE COPY?
Yes, please send me a sample copy free of charge of Protein Engineering
