Please read these instructions carefully and follow them strictly. In this way you will help ensure that the review and publication of your paper is as efficient and rapid as possible. In particular ensure that your paper is within the specified length limit. The editors reserve the right to return manuscripts that are not prepared in accordance with these instructions.

Scope and policy of CABIOS

CABIOS provides a forum for the exchange of information on the uses of computing in the molecular biosciences. The following categories of paper may be submitted for publication.

First Byte

This section is intended to provide introductory reviews or material that is essentially didactic. It may address any aspect of computer use that impinges on the activities of the life scientist. Authors who wish to submit material for this section are encouraged to contact the editors beforehand.

Reviews (approximately 6 printed pages)

Review papers cover particular aspects of the subject, and most are commissioned. However the editors welcome suggestions from prospective authors who should in the first instance submit a draft outline.

Full papers (approximately 6 printed pages)

Priority is given to papers that describe new algorithms. The diversity of computer systems and the lack of universal standards precludes the widespread application of software-oriented papers.

Communications (maximum 3 printed pages)

This section provides the opportunity for publication of short papers that discuss algorithms or software, but do not warrant publication as full papers. It provides a vehicle for authors who have translated an existing algorithm into a software package on another system.

Applications Notes

This section is for communication of information that is not appropriate for publication as a full paper, but may be useful to other scientists. Descriptions of useful improvements on existing algorithms, applications and implementations are suitable for such a contribution. Other topics may be acceptable; the editors will consider suggestions. Text should be limited to 750 words or less, or 500 words plus one figure. An abstract is not required.

Preparation of manuscripts

The executive editors, in conjunction with the editorial board and other referees will handle the full editorial process. Authors should submit all manuscripts to the appropriate editor as indicated below. News releases and Announcements should also go to the appropriate editor.

The Americas (USA, Canada and South America), the Pacific Rim and Australasia: Gary D. Stormo, Department of Molecular Biotechnology, University of Washington, Seattle, WA 98195-7730, USA.

Europe and the rest of the world: Barbara Cox, EMBL-EBI, Hinxton Hall, Cambridge CB10 1RQ, UK.

Japan: Minoru Kanehisa, Institute for Chemical Research, Kyoto University, Uji, Kyoto 611, Japan.

Submission of a paper implies that it reports unpublished work, that is not under consideration for publication elsewhere and that, if accepted, it will not be published elsewhere in the same form, either in English or in any other language, without the consent of the publisher. If previously published tables, illustrations or more than 200 words of text are to be included, then the copyright holder’s written permission must be obtained. Enclose copies of any such permission letters with your paper.

Papers must be clearly and concisely written in English. In the interests of speed, manuscripts are not extensively copy edited and authors are requested to check their texts carefully before submitting them so that proofs will require only correction of typographical errors.

Sections of the manuscript

Please subdivide manuscripts into the following sequence of sections, according to the type of paper.

Full papers. Title page, Abstract, Introduction, System and methods, Algorithm, Implementation, Discussion, References.

Communications. Title page, Abstract, main body of text, References.

Reviews. May be in a format best suited to subject matter, but should include Title page, Abstract, main body of text, References. For clarity the main body of text should be sub-divided into sections.

General format

An original and two copies of the manuscript must be submitted on A4 or American quarto paper. Number each page top right (Title page is 1). Please avoid footnotes; use instead, and as sparingly as possible, parenthetical within brackets. Underline only words or letters to appear in italics. Clearly identify unusual or handwritten symbols and Greek letters. Differentiate between the letter O and zero, and the letters I and L. Mark the position of each figure and table in the margin.

Length of manuscript

The length of the manuscript in printed pages can be calculated as follows: a full page of typeset text is approximately 1000 words; small type for the Acknowledgements, References and Figure legends fills approximately 1500 words per printed page. Also, suitable compensation should be made for tables, figures and equations.

Title page

The title should be short, specific and informative. The surname and initials of each author should be followed by his/her department, institution, city with postal code and country. Any changes of address may be added to the footnotes. The author to whom offprint requests are to be sent should be indicated by an asterisk and the footnote ‘To whom correspondence should be addressed’. Please provide a running head of not more than 50 characters. Up to five key words should be supplied to assist with the compilation of the annual Subject Index.

Abstract

The second page of every manuscript must contain the Abstract, which should be a single paragraph of 200 words (full papers and reviews) or 100 words (communications). The Abstract should be comprehensive to readers before they have read the paper and abbreviations and reference citations should be avoided.

Introduction

The Introduction should be brief but cover the field of the paper, describing previous work and establishing the background for the algorithm/program that is being reported.

System and methods

This section is the formal equivalent of a ‘Materials and methods’ section. It should include precise details of the hardware and software that is in use, including version numbers and release dates. It is not sufficient to state the language. Special enhancements and additions should be described in detail, particularly if they are designed ‘on site’ and are otherwise unpublished. Suppliers should be indicated where relevant. Other methods, including biological methods, should be described in full.

Algorithm

The algorithm section describes the theoretical background to the particular application. If this has been described previously, especially with relevance to the biosciences, it is sufficient to provide a brief description and appropriate citations. Short sections of clear, well annotated code are acceptable if they clarify a particular point. These should be prepared as a figure to avoid typesetting errors.

Implementation

This section should describe the implementation of the algorithm on the particular system. Examples of the user interface, i.e. input and output, should be included. Photographs of the VDU screen are acceptable if they make a particular point. Some indication of running times and other constrains (e.g. size of database) should be included where applicable. The performance of the software should be compared with that of other packages that are
generally available. If the program uses data, then trial data and examples of results should be included to permit other users to test the software.

**Discussion**

The discussion section should describe the applicability of the technique and other uses for which it can be employed. Authors are encouraged to discuss important features/constraints that they perceive in their system/software.

**References**

Authors are responsible for the accuracy of the References. Published articles and those in the press (state which journal has accepted them) may be included. In the text a reference should be cited by author and date; not more than two authors may be cited per reference; if there are more than two authors use *et al.* References must not be numbered. At the end of the manuscript the citations should be typed in alphabetical order, with the authors' surnames and initials inverted. References should include, in the following order: authors' names, year, paper title, journal title, volume number and inclusive page numbers. The name of the journal should be abbreviated according to the *World List of Scientific Periodicals*. Book references should also include the editors and the name and address of the publisher. References should therefore listed as follows:

Personal communications (J-Smith, personal communication) should be authorized by those involved in writing, and unpublished data should be cited as (unpublished data). Both should be used as sparingly as possible and only when the unpublished data referred to is peripheral rather than central to the discussion. References to manuscripts in preparation or submitted, but not yet accepted, should be cited in the text as: (B.Smith and N.Jones, in preparation) and should NOT be included in the list of references.

**Acknowledgements**

These should be included at the end of the text and not in footnotes.

**Tables**

Tables should appear on separate sheets and be numbered consecutively with Roman numerals. Tables should be self-explanatory and include a brief descriptive title. Footnotes to tables indicated by lower case letters are acceptable, but should not include extensive experimental detail. An arrow in the text margin should be used to indicate where a table should be inserted in the text.

**Figures**

All figures should be referred to in the text as Figure 1 etc. They should be presented separately and their approximate final positions marked in the margin of the text. Please label figures lightly on the back with number, first author, and paper title. An arrow should be used to indicate the top of the figure. All figures should be formatted to fit into, or be reduced to, a single (86 mm) or double (178 mm) column width. Figure legends should appear on a separate page.

**Line illustrations.** These must be of sufficient quality for publication as submitted, i.e. clear, clean, sharp, and of an even density. Figures will not be redrawn or relabeled. Any lettering or text should be in proportion with the rest of the figure.

**Photographs.** These must be of sufficient quality with respect to detail, contrast, and fineness of grain to withstand the unavoidable loss of contrast inherent in the printing process.

**Colour plates.** Inclusion of colour plates is subject to a special charge.

**Figure legends.** These should be on a separate, numbered manuscript sheet. Define all symbols and abbreviations used in the figure. Common abbreviations and others used in the preceding text should not be redefined in the legend.

**Conventions**

In general, the journal follows the conventions of the *CBE Style Manual* (Council of Biology Editors, Bethesda, MD, 1983, 5th edn).

Follow *Chemical Abstracts* and its indexes for chemical names. For guidance in the use of biochemical terminology follow the recommendations issued by the IUPAC-IUB Commission on Biochemical Nomenclature, as given in *Biochemical Nomenclature and Related Documents*, published by the Biochemical Society, UK. For enzymes, use the recommended name assigned by the IUPAC-IUB Committee on Biochemical Nomenclature, 1978, as given in *Enzyme Nomenclature*, published by Academic Press, New York, 1980. Where possible, use the recommended SI (Système International) units.

Genotypes should be italicized (underline in typed copy); phenotypes should not be italicized. For bacterial genetics nomenclature follow Demerec *et al.* (1966) *Genetics*, 54, 61–76.

**Abbreviations**

Try to restrict the use of abbreviations to SI symbols and those recommended by the IUPAC. Abbreviations should be defined in brackets after their first mention in the text. Standard units of measurements and chemical symbols of elements may be used without definition in the body of the paper.

**Chemical formulae and mathematical equations**

Wherever possible, write mathematical equations and chemical formulae on a single line. Please submit complex chemical structures as figures.

**Submission on disk**

In addition to the hard copies of the manuscript and figures, authors should provide a copy on disk which may be used for typesetting. Most Macintosh or PC-based wordprocessing packages are acceptable.

**LATEX**

TEX-based manuscripts should be produced using the LATEX article style format only. The document style options used must indicate two-column text with 86 mm column widths. The final version should be supplied on a disk containing both, tex and .dvi files. Hard copies of both the tex and any figures should also be supplied as for conventional submissions. Authors will receive proofs in the normal way.

**Electronic mail**

Authors are encouraged to use electronic mail for correspondence. Include a full electronic mail address on the title page of the manuscript if at all possible. The electronic addresses are:

G.D.Stormo: STORMO@BOULDER.COLORADO.EDU
C.Sander: CABIOS@EMBL-EBI.AC.UK
M.Kanehisa: Production Office: JEFFERS@OUP.CO.UK

**Page charges**

Page charges are not levied.

**Proofs**

Authors are sent page proofs. To avoid delays in publication, proofs should be checked immediately for typographical errors and returned to the publishers by express (special delivery) post. Alternatively, to save time, corrections may be given by fax or telephone to The Production Editor (CABIOS), Oxford University Press, Tel: (0) 1865 56767; Fax: (0) 1865 267773. A charge is made to authors who insist on amendment within the text at the page-proof stage.

**Copyright**

It is a condition of publication in CABIOS that authors assign copyright. This ensures that requests from third parties to reproduce articles are handled efficiently and consistently and will also allow the article to be as widely disseminated as possible. In assigning copyright, authors may use their own material in other publications provided that CABIOS is acknowledged as the original place of publication.
Guide for authors preparing electronic documents

**DO**

Enter text in the style and following order of the journal:

- Title
- Authors
- Address
- Abstract
- Introduction
- Materials and methods
- Results
- Discussion
- Acknowledgements
- References
- Figure legends
- Tables
- Abbreviations
- Running heads.

Save any tables, diagrams, figures, graphs or illustrations generated electronically as separate files and not embedded into the text file.

Type references as near to CABIOS style as possible with no space between names and initials of individual authors, the Journal titles italicized and volume numbers bold.

Type unjustified, without hyphenation, except for compound words.

Type headings in the style of the journal.

Use the TAB key once for paragraph indents.

Where possible use Times for the text font and Symbol for the Greek and special characters.

Use the word processing formatting features to indicate **Bold**, *Italic*, Greek, Maths, Superscript and Subscript characters.

Indicate clearly any special characters that you have drawn by hand.

Check the final copy of your paper carefully, as any spelling mistakes and errors will be faithfully translated into the typeset version. In the case of a mismatch between disk and hard copy, the hard copy will be taken as the definitive version.

Indicate on the form overleaf the contents of each file.

Supply three hard copy printouts of the paper.

**DO NOT**

Enter carriage returns to obtain spacing between lines, paragraphs, references etc. The space required is generated automatically by the typesetters.

Use double spaces after each sentence within a paragraph.

Use the automatic page numbering, running titles and footnote features of your word processing programme. Number the hard copies by hand at the bottom of the page.

Include any copyright material (e.g. word processor software or operating system files) on the disk.

**DISK SUBMITTAL**

After the manuscript has gone through all the review and editing stages, copy the data on to a clean newly formatted disk. To avoid confusion do not copy any irrelevant files and/or back-up files onto the disk.

Apple Mac users should ensure the disk wastebasket is empty before submitting the disk.

Use the first-named author's name or manuscript number for the disk label and the file name.

To avoid loss or damage in transit ensure that the disk is adequately protected and always keep a copy of the data on your computer and/or back-up disk.

OUP does not intend to return the disk to the originator.

For further information contact:

Journals Department
Science, Medical & Journals Division, Oxford University Press
Walton Street, Oxford OX2 6DP, UK
Telephone: (+44 1865 or 01865) 56767 Telefax: (+44 1865 or 01865) 267773
OUP Journals Manuscript/Disk Submittal Form

Completion of all the relevant sections of this form will assist in the swift and efficient publication of your paper.
