Supplementary Figure 1. Reproducibility analysis using independent datasets. Differences in structural covariance and graph-theoretical parameters for the independent 3 T MCD dataset scanned (upper panels) and FCD-I compared to controls. Please see figure 1-3 for details.
Reproducibility analysis using high-resolution parcellation

A. Differences in inter-regional structural covariance

B. Graph-theoretical parameters

A. Differences in inter-regional connectivity

B. Graph-theoretical parameters

Supplementary Figure 2. Reproducibility analysis using high-resolution parcellation. Group differences in
inter-regional connectivity and graph-theoretical parameters for structural covariance (derived from the 1.5 T dataset) and resting state fMRI networks (derived from the 3 T dataset) using 1000 parcels. See figure 1-3 for details.
