INSTRUCTIONS TO AUTHORS

COPYRIGHT ASSIGNMENT

The Endocrine Society publishes papers describing the results of original research in the field of endocrinology and metabolism in the JOURNAL OF CLINICAL ENDOCRINOLOGY AND METABOLISM, ENDOCRINOLOGY, MOLECULAR ENDOCRINOLOGY, and ENDOCRINE REVIEWS.

The JOURNAL OF CLINICAL ENDOCRINOLOGY AND METABOLISM publishes endocrine and metabolic studies related to human and primate physiology and disease. ENDOCRINOLOGY publishes nonprimate biochemical and physiological studies, although work on material of primate origin is not excluded. MOLECULAR ENDOCRINOLOGY publishes studies of the effects of hormones and related substances on the molecular biology and genetic regulation of nonprimate and primate cells. ENDOCRINE REVIEWS publishes bimonthly and features in-depth review articles on both experimental and clinical endocrinology. Authors are invited to consult with the Editors concerning the most appropriate journal to which to submit their manuscripts.

All authors submitting manuscripts for publication must provide assurance, on the form provided, or a copy thereof, that no substantial part of the work has been published or is being submitted or considered for publication elsewhere. When a portion of the results is to appear in another journal, or in publications of congresses, symposia, workshops, etc., details should be supplied to the Editor, and a copy of the other paper(s) submitted, along with the expected date of publication.

Effective with manuscripts submitted after January 1, 1993, a manuscript processing fee of $60 must be submitted with each typewritten manuscript that is accompanied by a computer diskette containing the complete text of the manuscript (most word processing languages are acceptable). For manuscripts that are not accompanied by a computer diskette containing the complete text of the manuscript, the processing fee is $160. Diskettes may be submitted with the final, revised version of the manuscript (i.e., after it has been reviewed and returned to you). Manuscript processing fees do not apply to authors of papers submitted to Endocrine Reviews. The fee must be paid in United States currency by check or money order, payable to the journal, and drawn on or payable by a United States bank, so that it will clear the US Federal Reserve System with no surcharge. Manuscripts will not be considered for publication until this fee is received. The fee also is required if a previously rejected manuscript is resubmitted.

The Journals are copyrighted by The Endocrine Society to protect the Society and authors from unauthorized use of its contents. The Society grants to authors the royalty free right of republication in any work of which they are the author or editor, subject only to giving proper credit in the work to the original publication of the article by The Endocrine Society.

The following affidavit affirming originality and assigning copyright to The Endocrine Society must be submitted to the Editorial Office with all manuscripts. Separate copies of this document may be submitted by authors currently located at different institutions, but such copies must be submitted with the manuscript. If the manuscript is not accepted for publication, the copyright assignment on the reverse side has no legal effect and will be returned on request. A manuscript will not be considered for publication until this affidavit and the processing fee (fee not applicable for submissions to Endocrine Reviews) are received.
ENDOCRINE REVIEWS

AFFIRMATION OF ORIGINALITY AND ASSIGNMENT OF COPYRIGHT

Mail this form with the original manuscript and 3 copies to:

Andres Negro-Vilar, M.D., Ph.D., Editor-in-Chief
639 Kensington Drive, P.O. Box 3560
Chapel Hill, NC 27514

The authors(s) hereby affirms that the manuscript entitled: ____________________________

is original (albeit containing material required for a review), that all statements asserted as facts are based on
author(s) careful investigation, research, and literature survey for accuracy, that the manuscript does not, in whole
or part, infringe any copyright, violate any right of privacy or other personal or property right whatsoever, or falsely
designate the source of authorship, that it has not been published in total or in part and is not being submitted or
considered for publication in total or in part elsewhere, and that author(s) has full power and authority to enter into
this copyright assignment and to make the grants herein contained.

In signing this form, each author acknowledges that he/she participated in the work in a substantive way and is
prepared to take public responsibility for the work.

The author(s), in consideration of the acceptance of the above work for publication, does hereby assign and transfer
to The Endocrine Society all of the rights and interest in and to the copyright of the above titled work.

A. All authors must sign.

ENDOCRINE REVIEWS publishes scholarly review articles in all areas of experimental and clinical endocrinology on a bimonthly basis. Endocrinology is defined in its broadest sense as the study of hormones and local regulatory factors and their influence(s) on biologic functions in normal or diseased states, at the organismal, cellular or biomedical level in all species. Articles dealing with the clinical practice of endocrinology may be suitable when warranted by significant change or controversy in a field.

Manuscripts should present a timely, authoritative review of a topic in endocrinology that is of general interest. Authors should provide sufficient background information to allow both endocrinologists and other scientists to gain both knowledge and perspective of the subject. While a limited amount of new data may be included to buttress the author's point of view, manuscripts that deal primarily with new findings should be submitted to ENDOCRINOLOGY or THE JOURNAL OF CLINICAL ENDOCRINOLOGY AND METABOLISM, or MOLECULAR ENDOCRINOLOGY.

Manuscripts will be reviewed for scientific accuracy, clarity, and balance of perspective by members of the Editorial Board and other experts in the field. Manuscripts which focus entirely on the author's previous contributions to the literature will not be accepted.

PLEASE NOTE: Read the following instructions carefully. Failure to comply with certain steps, especially those listed in sections II and IV, may slow the review process.

SPECIFICATIONS

I. Submission of Proposals for Manuscripts

Manuscripts may be solicited by the Editor-in-Chief or proposals for manuscripts may be submitted independently by interested individuals. When submitting a proposal, authors should include the following items:

1. A full outline of the proposed review, listing all topics to be covered
2. A curriculum vitae for each author
3. A bibliography of the author's published work
4. A completion date for the manuscript

Once a proposal has been reviewed by the Editors, the author will be notified of its status. If accepted, the author is asked to use the following instructions:

II. Form of Manuscript

1. The manuscript, as well as the references, must be typewritten copy double-spaced with wide margins. The original manuscript and three copies are required, including tabular material. Only one set of original illustrations is required. Clear copies will be acceptable for the remaining two copies of the manuscript.

Authors are asked to submit electronic diskettes of the final version of their manuscripts along with the typed revised manuscript. Diskettes produced on IBM or IBM-compatible computers are preferred, but those produced on some Apple or Wang computers can also be converted. The following word processing programs are preferred: XyWrite III Plus, Word Perfect 4.2, 5.0, or 5.1, Microsoft Word (IBM), Wang OIS (WPS), & Wordstar (IBM). Among other word processing systems that can be converted are CPT 8000, MacWrite 2.2 or 4.5, Microsoft Word (Apple/Macintosh), Display Write 3 or 4, Multimate, PC Write, and Volkswriter. Authors preparing diskettes on Macintosh computers should not use the Fastsave option. Files in ASCII can also be used, but are not preferred. Identify the diskette by providing the journal name, senior author's name, manuscript title, name of computer file, type of hardware, operating system and version number, and software program and version number used. PLEASE NOTE: The journal does not assume responsibility for errors in conversion of customized software, newly released software, and special characters. Mathematics and tabular material will be processed in the traditional manner.

2. The title page should list the following:
   a. Full and abbreviated manuscript titles
   b. Full names, degrees, and institutions for all authors
   c. The name and address of the corresponding author
   d. Any grants or fellowships that supported the writing of the review.

3. References to the literature should be in numerical order (in parentheses) in the text and be listed in the same numerical order at the end of the manuscript on a separate sheet or sheets. There must be only one reference to a number.

References to articles in journals should be given in the following order: names of all authors with initials, year, title of paper with only the initial letter of the first word capitalized, abbreviated name of journal, volume, and fully annotated, inclusive pages. For example:

References to chapters in books should be listed as follows:

Heard RDH 1948 Chemistry and metabolism of the adrenal cortical hormones. In: Pincus G, Thimann KV

References to books should be listed as follows:

The number of references cited should be comprehensive for current or recent citations, but need not include all previous references. To this end, appropriate recent reviews should be cited whenever possible. The citation of unpublished observations, of personal communications and of manuscripts in preparation or submitted for publication will not be permitted in the bibliography. Such citations should be inserted at appropriate places in the text, in parentheses and without serial number, or be presented in footnotes. The citation of manuscripts in press (i.e., accepted for publication) is permitted in the bibliography; the name of the journal in which they will appear must be supplied. If references to personal communications are made, authors are encouraged to keep written proof of the exchange. If it is necessary to cite an abstract because it contains substantive data not published elsewhere, it must be designated at the end of the reference [e.g., . . . 68:313 (Abstract)]. The author is responsible for the accuracy of the references.

4. Illustrations. Each figure should be accompanied by a title and a legend, typed on a separate sheet of paper. The legends for more than one figure may be on the same sheet. Identify all figures on the back, in soft pencil, with the authors' names and figure number and indicate TOP.

Graphs and diagrams must be submitted as sharp photographs on white glossy paper. One set of unmounted illustrations should be submitted with the original manuscript. The additional sets for the other two copies of the manuscript may be prepared by whatever means of copying is available, except that prints of photographs for halftone reproduction (e.g., photomicrographs) are required.

In most instances figures will be reduced to one column width. All letters or numbers should be drawn to be at least 1.5 mm high after reduction, symbols at least 1.0 mm. Photographs for halftone reproduction must be on white glossy paper. They should be trimmed or be able to be reduced to one column width, if possible.

In the construction of graphs in which very large or very small numbers will appear on an axis, the convention for the notations used is best shown by examples: In the construction of an ordinate for counts per minute, where values between 1,000 and 20,000 are to be plotted, the scale may run from 1 to 20, and the ordinate should be labeled “cpm (×10^{-3}),” i.e., the true value has been multiplied by 10^{-3} to give the number on the ordinate.

Similarly, in a Scatchard plot where values of 0.1 to 2 femtomolar M×(10^{15}) are to be plotted, the scale may run from 0.1 to 2 and the abscissa should be labeled “L×(10^{15}).”

Photographs in color must be approved by the Editor-in-Chief, are published at the author's expense and require 4–6 weeks additional lead time prior to publication of the article.

5. Tables must be submitted in the form of typewritten copy. Photographs of tables are not acceptable. Each table must have a concise heading and be constructed as simply as possible; it must be intelligible without reference to the text. At the foot of the Table a description of experimental conditions may appear together with footnotes. Tables that duplicate text or figures will not be accepted. In preparing tables, the width of the table must be in relation to the size of the journal page. Depending on the nature of the entries, not more than 4 vertical rows should be planned for a small table (a table designed to occupy the width of one column) and not more than 8 to 10 rows for a large table (one designed to occupy both columns of a page).

6. Abbreviations, Symbols and Nomenclature. Use of the International System of Units (SI) is recommended. (Page, C. H. and P. Vigoureux (eds.), NBS Special Publication 330, U.S. Government Printing Office.) The metric system for weights and measurement, degrees Celsius for temperature and the 24 hour clock to express time should be used. Do not express molecular weights in daltons. Molecular weight is considered to be the relative molecular mass of a substance, i.e., the ratio of the mass of one molecule of the substance to \( \frac{1}{12} \) of the mass of one atom of carbon 12. Therefore, molecular weight is dimensionless. The dalton is a unit of mass equivalent to \( \frac{1}{12} \) of the mass of one atom of carbon 12.

Drugs should be designated by their generic names; however, trade names (spelled exactly as trademarked) may be used after a drug has been identified once by its generic name or by its systematic chemical name. A drug must also be identified in this way if its trade name appears in the title or in the summary of a manuscript. Systematic chemical names should conform to the usages given in the indexes of Chemical Abstracts. Nomenclature and symbols should conform to the recommendations of the International Union of Pure and Applied Chemistry (IUPAC) and the International Union of Biochemistry (IUB). (For references, see J Biol Chem 252:10, 1977.) A complete listing may be found in Handbook for Authors, American Chemical Society Publications, Washington, D.C., 1967. Peptide nomenclature (e.g., in naming synthetic analogs of naturally-occurring hormones) should follow IUPAC rules, which may be found in J Biol Chem 242:555, 1967; 247:323, 1972. Two examples are: (5-isoleucine, 7-alanine)-Angiotensin II or (Ile^{5}, Ala^{7})-Angiotensin II for the analog of the peptide in which the amino acids normally occurring at positions 5 and 7 are replaced by isoleucine and alanine, respec-
Designation of isotopes: A is to be used to designate element A whose atomic mass is y (e.g., $^{14}$C, $^{3}$H).

Designation of compounds containing carbon: $C_x$ is to be employed to refer to a compound containing x carbon atoms (e.g., "... the C$_{19}$ steroids ..."), and $C_x$ is to be employed to refer to the x$^{th}$ carbon atom of a molecule (e.g., "... the hydroxyl group of C-11 ...").

In designating isotopically labeled chemical compounds, two general forms are to be followed. In the case of a chemical formula, insert the symbol for the isotope (e.g., $^{14}$C, 3H). $C_x$ is to be employed to refer to a compound containing x carbon atoms (e.g., "... the C$_{19}$ steroids ..."), and $C_x$ is to be employed to refer to the x$^{th}$ carbon atom of a molecule (e.g., "... the hydroxyl group of C-11 ...").

In designating isotopically labeled chemical compounds, two general forms are to be followed. In the case of a chemical formula, insert the symbol for the isotope into the formula (e.g., NaH$^{14}$CO$_3$). In the case of a chemical name or abbreviation, the form of the following examples should be used: for glucose labeled in the C-1 position use [1-14C]glucose; for diiodotyrosine labeled with $^{131}$I use $[^{131}$I]diiodotyrosine. Proteins labeled with $^{125}$I or $^{131}$I should be designated as iodoproteins, e.g., $[^{125}$I]iodoinsulin. As a generalization, any group used to label a molecule which produces a derivative of that molecule must be recognized in the naming of the molecule, e.g., $[^{3}$H$_3$]methylated bovine serum albumin.

III. Organization of Manuscript

1. Title: This should be a carefully prepared, concise statement of the article’s major contents. It should provide sufficient information to allow the reader to judge the relevance of a paper to his interest. It should include key words or phrases that are useful for indexing and information retrieval.

A short running title of not more than 40 letters and spaces also must be provided for page headings.

2. An outline of the manuscript’s contents helps to lead the reader by providing preliminary information on the structure of the review.

3. Introduction: The introduction should indicate the essence of the review and provide historical perspective. It should describe the scope of the review and give some insight, if possible, into its perspective and conclusions. Previous related reviews should be cited. Avoid non-standard abbreviations, unfamiliar terms, symbols or acronyms not easily understood by the general scientific reader.

4. Body of manuscripts: The organization of this privileged section of the review is left to the authors. However, the organization should be logical and readily comprehended by the reader. As indicated above, a table of contents that indicates this organization is desirable.

IV. Obtaining Permission to Reproduce or Adapt Figures and Tables

1. If you plan to use a figure or table that is not original to the article in which it will appear, or wish to adapt such, it is necessary to obtain permission from the copyright holder. The copyright holder is either the publisher or the author(s).

   * If the copyright holder is the publisher, permission must be granted by the publisher, who may require that you contact the first author as well.

   * If the copyright holder is the author, permission is obtained from the first author, although it is a good idea to check with the publisher to make sure the author actually holds the copyright.

2. A note on terminology: Adapting a figure or table involves using a significant portion of another author's original figure to convey your own information as well. If you have developed an original figure or table based on data contained in another author's article, then that figure is derived and does not require permission-it is sufficient to mention the reference in the legend.

3. When requesting permission, include the following information:

   1) The citation for the article, chapter, etc. in which the figure appeared, giving the original figure number as well

   2) The name of your article and the journal in which the figure will appear

   3) The acknowledgement as it will appear in ENDOCRINE REVIEWS:

      Article: First author et al.: Journal vol:page, year (reference #)

      Book: First author et al.: Title (editors), publisher, city, place, year, page (reference #)

   After obtaining the necessary permission, send the originals to the ENDOCRINE REVIEWS Editorial Office, where they will be kept on file. These letters should be received with the submitted manuscript, or soon after.

V. Counterpoint Articles

Counterpoint articles are provided as companion pieces to standard reviews in order to give a wider perspective on a given topic. These articles provide a clinical perspective to basic science reviews, or vice versa. When a review is accompanied by a counterpoint article, both authors will be given the opportunity to see the work of the other. Authors submitting counterpoint articles should follow the same instructions as they would for standard reviews.

VI. Proofs and Reprints

Proofs and a reprint order are sent to the first author unless the Editorial Office is advised otherwise. The author should designate by footnote on the title page of the manuscript the name and address of the person to whom reprint requests should be directed.

VII. Page Charges

There are no page charges for ENDOCRINE REVIEWS, other than for color illustrations.

VIII. As a condition of publication, the author(s) agree to provide propagative materials such as DNA clones, cell lines, and hybridomas developed by the authors and used in the studies to qualified investigators who may wish to duplicate the published experiments.
THE LAURENTIAN HORMONE CONFERENCE
will celebrate its 50th meeting at
Palmas del Mar, Puerto Rico
13–17 November 1993

Topics will include:
STEROIDS
TRANSMEMBRANE SIGNALLING
REPRODUCTION
NEUROENDOCRINOLOGY

Contact:
Laurentian Hormone Conference
Box 273-JES
1230 York Avenue
New York, NY 10021

HOW DO YOU FIND QUALIFIED ENDOCRINOLOGISTS?

CLASSIFIED ADVERTISING IN THE ENDOCRINE SOCIETY’S JOURNALS.

- Reach 17,000 subscribers to the Journal of Clinical Endocrinology and Metabolism; Endocrinology; and Molecular Endocrinology.

- Spend just a little money to achieve impressive results.

- Save time, money and energy by advertising your professional opportunities to the most highly qualified audience available.

"I always use the Endocrine Society’s classified ads when I need to hire an endocrinologist. It’s the most efficient and effective way to conduct a search!"
- Professional Physician Recruiter

Remembrances in Endocrinology:  
An Endocrine Society History of the Study of Endocrinology and its Practitioners

This limited edition book captures the most important events in the 75 year history of Endocrinology and the Endocrine Society.

From Roy O. Greep’s affectionate reminiscence of Endocrinology’s growing pains in Post World War II society to P. Michael Conn’s concluding article “Remembrance for the Year 2016,” Remembrances will enchant readers with its personal comments on a multitude of endocrinology-related subjects.

All in all, this is a great book to dip into, for fun, inspiration, or simply as a telling reminder of how things have changed in the 75 years since the Endocrine Society was founded.

1993. ISBN 1-879225-09-3. Clothbound, 113 pages, Member: $35.00, Nonmember: $45.00, International Air Mail $14.00 (additional.)
