Suppl. Table 3. Associations between normalized OPs and DNA methylation at CpG sites of imprinted genes: extended results.

Multivariable robust linear regression: adjusted for age and BMI status. Results are shown by increasing p-values; p<0.05 are marked in bold. * Indicates the associations that are still significant after D/AP correction, given a nominal alpha-level of 0.0031.

Suppl. Table 5. Associations between total motile sperm count or motility and DNA methylation at imprinted genes

Spearman correlation coefficients are shown. Significant results are shown in bold.

* If significant and if DNA methylation at this site was also associated with ipPPP exposure.
