Final version published online 14 August 2012

DOI: 10.1111/j.1574-695X.2012.01011.x

In the paper by Ciofu et al. (2012), Fig. 3a had the wrong image for the rightmost segment. The figure is reproduced correctly below.

![Fig. 3. Pseudomonas aeruginosa ΔmutT strain exhibiting enhanced microcolony development (a) and increased biofilm volume (b) and maximum microcolony thickness (c). Biofilm development of P. aeruginosa PAO1 wild type, ΔmutT and PAO1ΔmutT complemented with plasmid containing wild-type mutT (pLM101) grown in continuous culture flow cells over 4 days and examined using confocal scanning laser microscopy. All strains are GFP-tagged.](image_url)
