

FIGURE S2.—Endogenous levels of miR-51 family miRNAs are able to regulate a sensor transgene containing *cdh-3* 3'UTR sequences. (A-C) GFP was expressed under the *col-10* promoter and the *cdh-3* wild-type 3'UTR. The transgene was expressed at a lower level in the presence of a miR-52-expressing rescue array (A) or in the wild-type background (C) than in the absence of any miR-51 family miRNAs (B). D) Quantification of mean pixel intensity in >30 animals. Bars represent the standard error of the mean.
