

FIGURE S2.—Transcript levels of *ATF1* by overexpression or suppression of *CAN2* expression. Northern blot (top panel) and quantitative RT-PCR (qRT-PCR, bottom panel) show transcript levels of *ATF1* in the wild-type and the $P_{CTR4}::CAN2$ strains grown in YNB+BCS medium (left panel) or the $P_{CTR4}::CAN2$ grown in YNB+BCS and YNB+CuSO₄ medium. For qRT-PCR, data obtained from three independent biological replicates with three technical replicates were normalized by using *ACT1* as a control. Relative gene expression indicates normalized *ATF1* expression levels to those of the wild-type strain (left panel) or the $P_{CTR4}::CAN2$ strain in YNB+BCS medium (right panel).
