

Figure S20 Summary of Fay and Wu's H by coverage class for two neutral models – the standard neutral model (SNM) and the three-epoch model from Ersöz *et al.* (2010). Boxplots give the observed distributions across amplicons, while colored points denote outliers (red = lower tail, blue = upper tail) at the $P = 0.05$ level. Whiskers extend to the extremes of the observed data. (A) The standard neutral model (SNM). Counts are given above this panel. (B) The three-epoch model (TEM) from Ersöz *et al.* (2010). Counts are given above this panel.
