

**Supplementary Table SII Risk of cancer before age 18 and from age 18 onwards; Cox regression analyses.**

	Till 18 years			From 18 years		
	Total no.	No. of cancers	Age-adjusted HR (95% CI)	Total no.	No. of cancers	Age-adjusted HR (95% CI)
ART versus no ART						
Non-ART	23 421	60	1.0 (reference)	18 746	78	1.0 (reference)
ART	24 269	69	1.02 (0.72–4.44)	15 265	24	1.31 (0.79–2.18)
ART- or FD-conceived versus naturally conceived						
Naturally conceived	13 761	37	1.0 (reference)	11 397	55	1.0 (reference)
ART-conceived	24 269	69	0.95 (0.64–1.42)	15 265	24	1.25 (0.73–2.13) <sup>b</sup>
FD-conceived (non-ART) <sup>a</sup>	4181	9	0.74 (0.36–1.53)	2705	4	0.78 (0.28–2.18)

FD = fertility drug; HR = hazard ratio.

<sup>a</sup>Children conceived by fertility drugs (with/without intrauterine insemination).

<sup>b</sup>Sensitivity analyses from age 18 onwards with censoring at age 35 (because of the slightly older age of naturally conceived children) showed comparable results (age-adjusted HR = 1.23, 95% CI: 0.72–2.10).
