Supplementary Figure S4. Chemokine expression was downregulated during HESC decidualization in response to OPG knockdown. (A–F) qRT–PCR analysis of SDF-1, CXCR4, CXCL16, VEGFA, VEGFB, PTX3 mRNA expression in differentiated HESC, transfected with siCON or siOPG and then treated with differential culture medium for 2, 4 and 6 days. The values are normalized to the GAPDH expression level and indicated as the mean ± SEM of four independent experiments (n = 4, *P < 0.05, **P < 0.01, versus controls).
