Supplemental Figure S1  Benign and malignant lesions found in transplanted animals upon necropsy. Left panel displays a photograph of the lesion taken during the necropsy, right is an HE staining of the tissue as an informative magnification. If lesions occurred more than once, a representative sample is depicted in this figure. Benign lesions (from top to bottom): epidydimal fat pad adhesion in mouse 519823, post-surgical hematoma in mouse 541555, benign mesenteric lymph node hyperplasia in mouse 541554, hemangioma located on the liver in mouse 541554. Malignant lesion: diffuse large cell lymphoma in mouse 523148.
