Supplementary Figure 2: Biochemical results of inflammatory markers used in the assessment of disease activity in inflammatory bowel disease (IBD) patients. Dot plots of the inflammatory markers used in the biochemical assessment of disease activity in HC, UC and CD individuals (mean values shown) (A) C-Reactive Protein (mg/L) (B) Erythrocyte Sedimentation Rate (mm/hour) (C) Albumin (g/L) (D) Haemoglobin level (x10^9/L) (E) White blood count (x10^9/L) (F) Platelet count (x10^9/L). The dotted line indicates the upper or lower limits of the specified inflammatory marker. All p values calculated using unpaired Student’s t-test where p<0.05 is statistically significant. ns, non-significant. *p<0.05.
