

Sensitivity analyses: birth

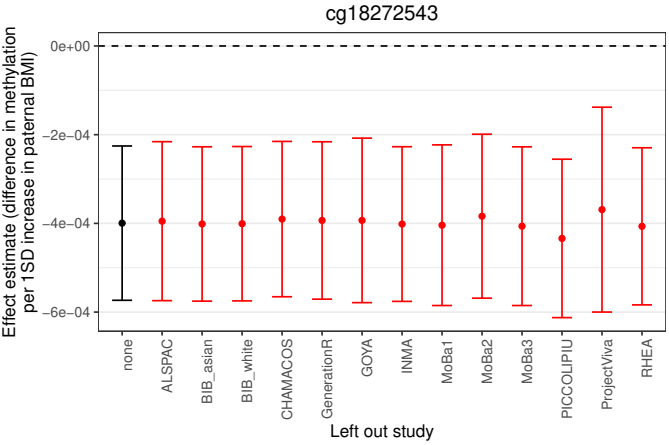

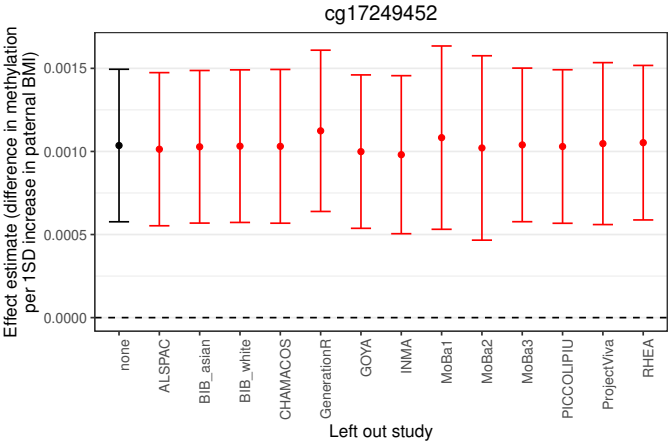

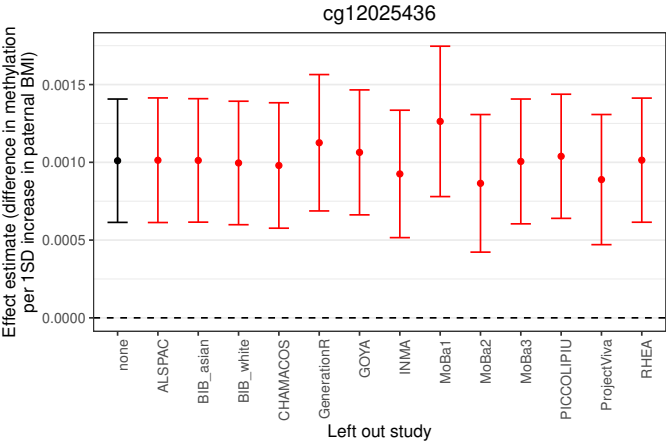

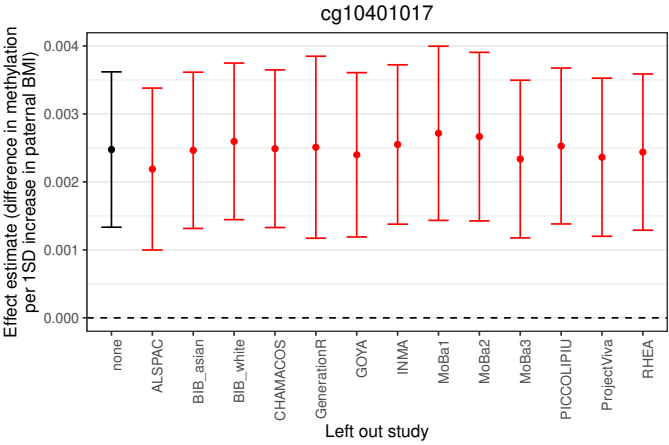

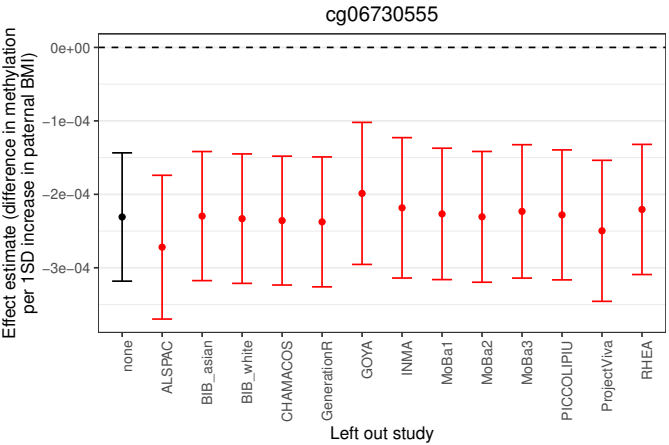

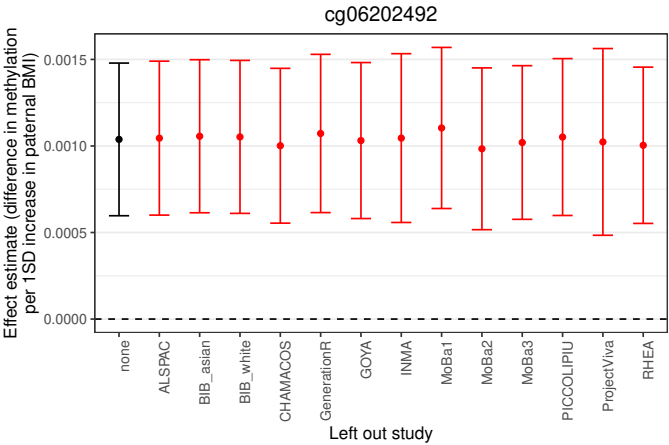

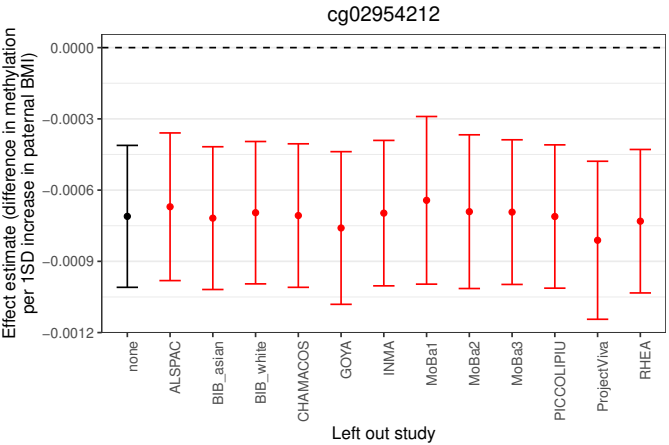

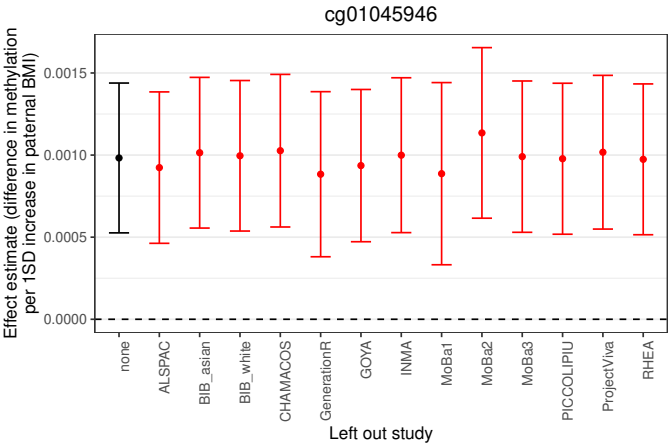

For each model, at CpGs with $P < 1e-5$, we conducted a leave-one-out analysis (systematically leaving one cohort at a time out of the meta-analysis) and plotted the resulting effect estimate and 95% confidence interval.

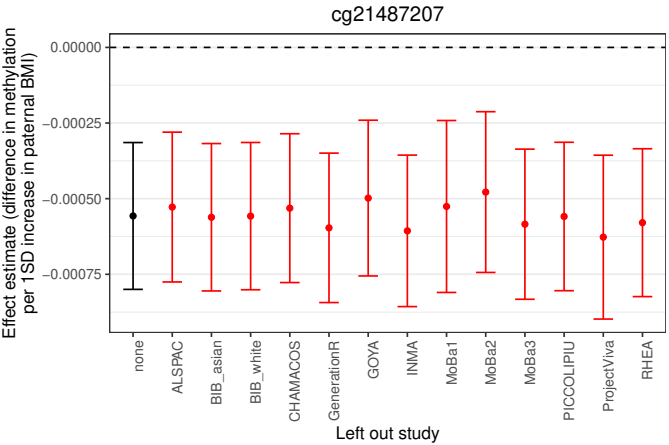

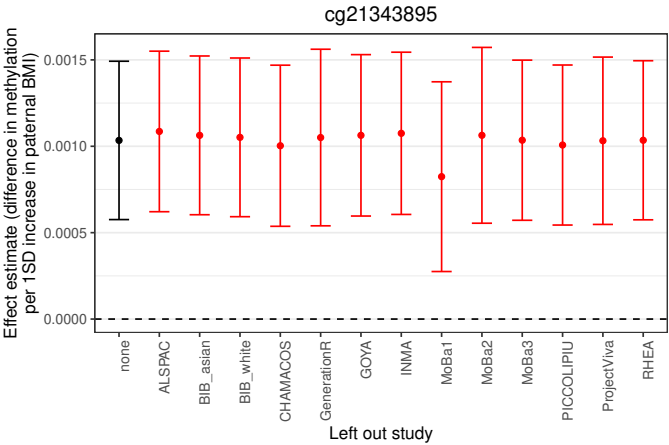

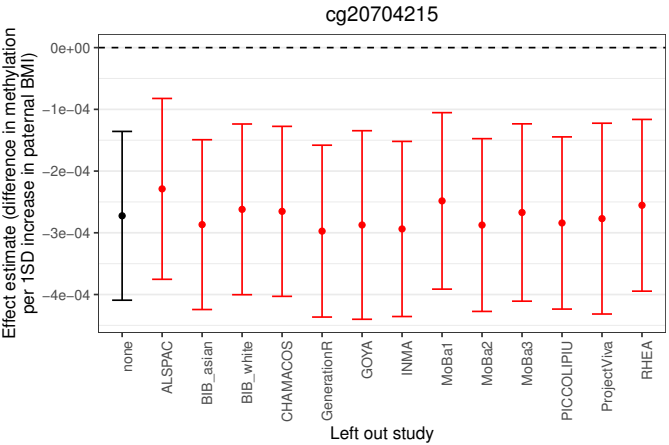

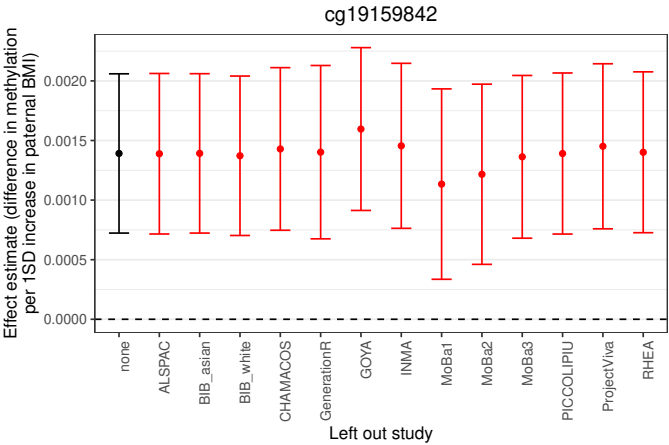

Contents:

- Paternal BMI (unadjusted for maternal BMI): pages 3-4
- Paternal BMI (adjusted for maternal BMI): pages 6-7
- Paternal BMI adjusted for maternal BMI – female offspring only: pages 9-10
- Paternal BMI adjusted for maternal BMI – male offspring only: page 12

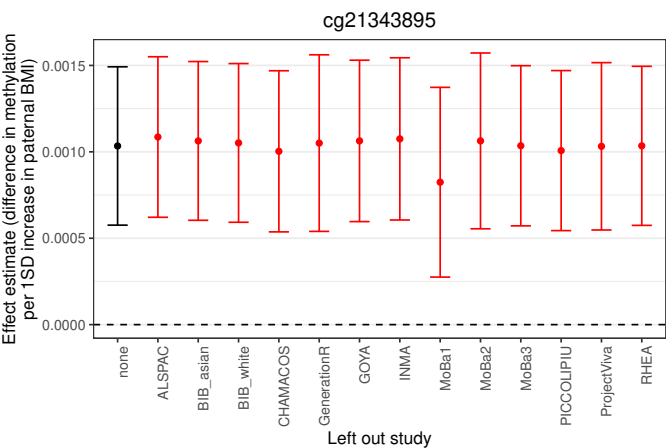

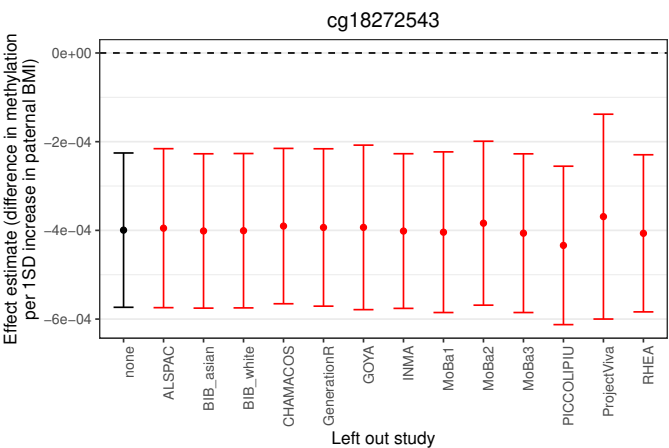

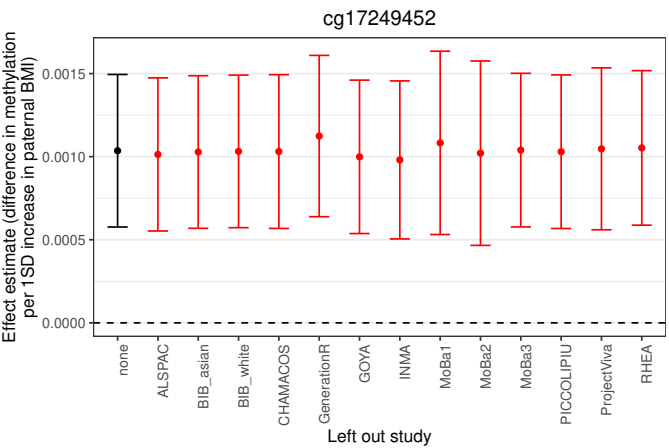

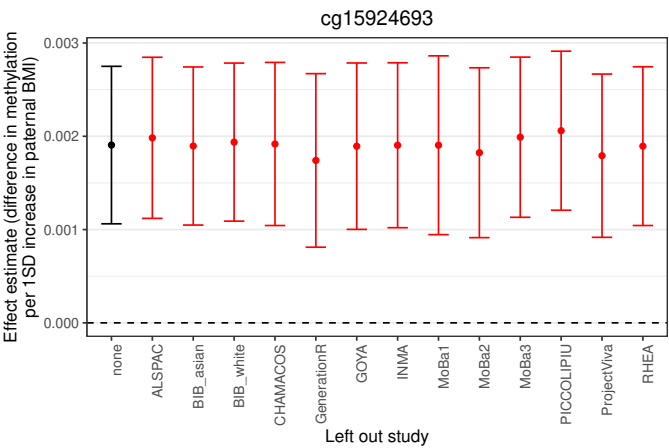

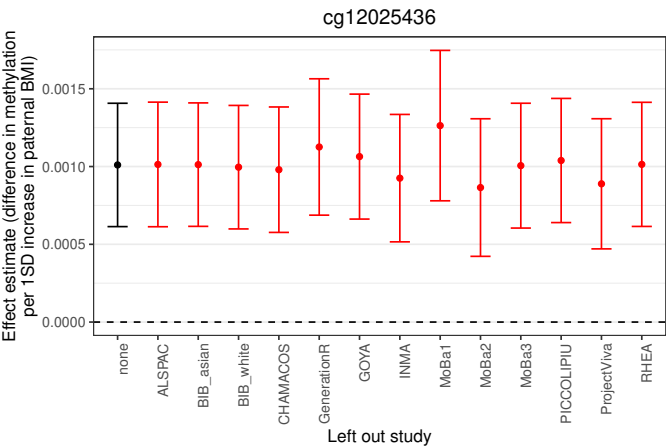

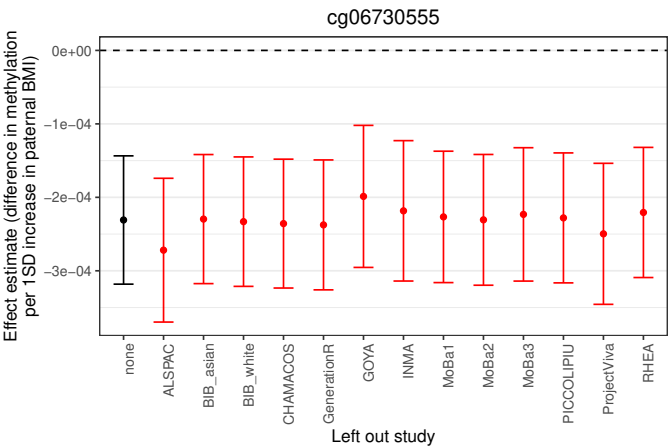

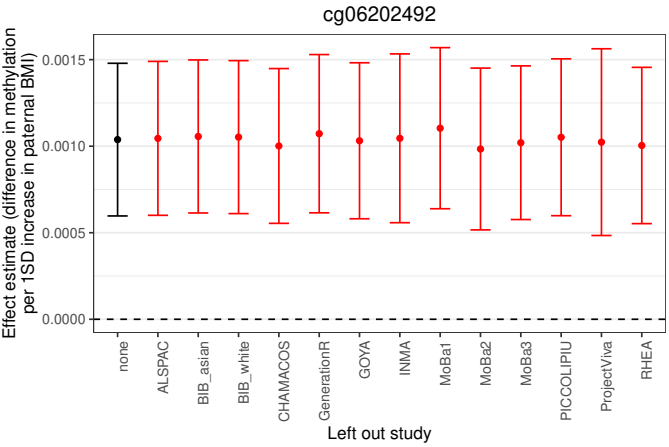

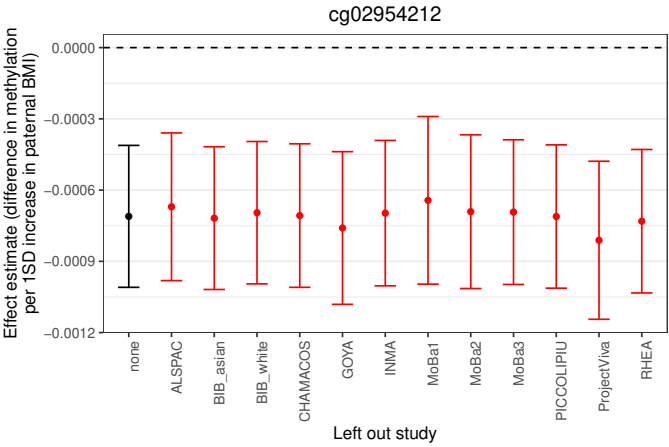

- Maternal BMI (unadjusted for paternal BMI): pages 14-20
- Maternal BMI (adjusted for paternal BMI): pages 22-27
- Maternal BMI adjusted for paternal BMI – female offspring only: pages 29-31
- Maternal BMI adjusted for paternal BMI – male offspring only: pages 33-34

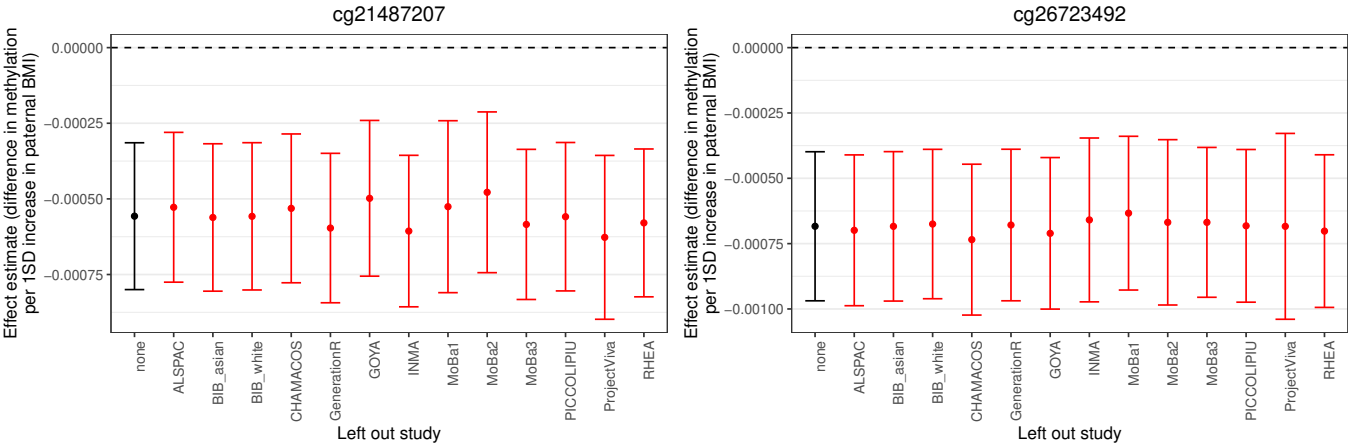

Paternal BMI (unadjusted for maternal BMI): pages 3-4

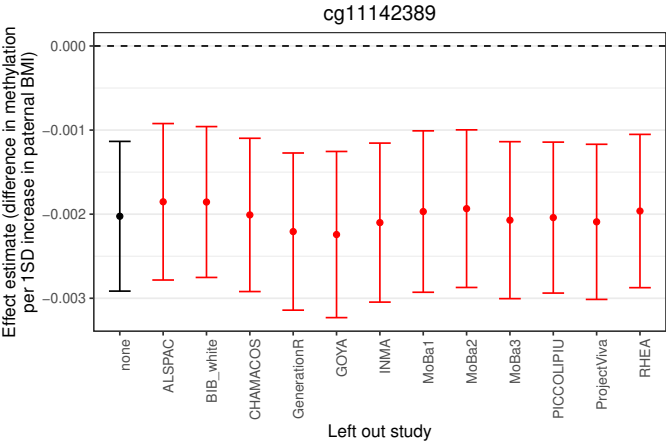

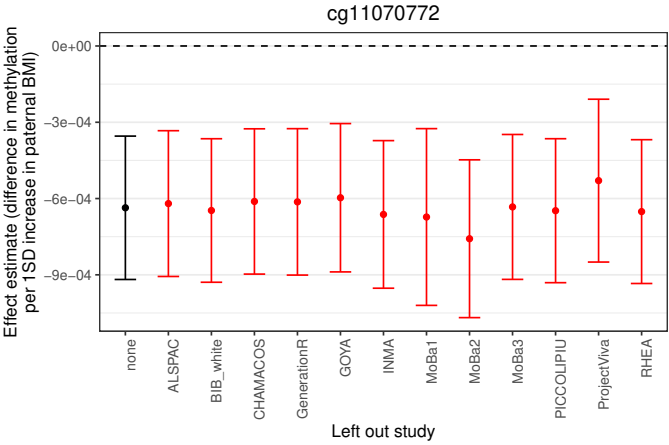

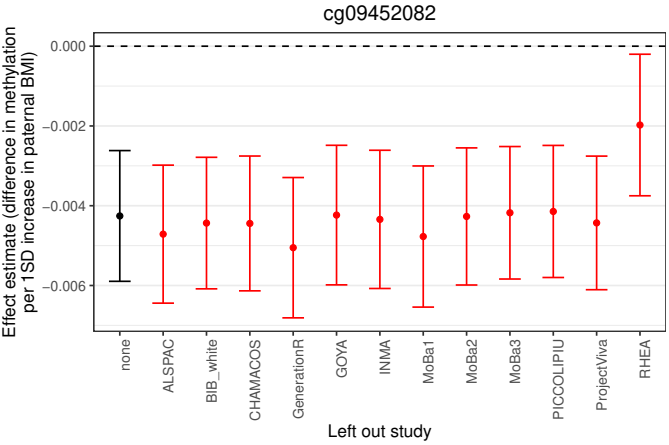

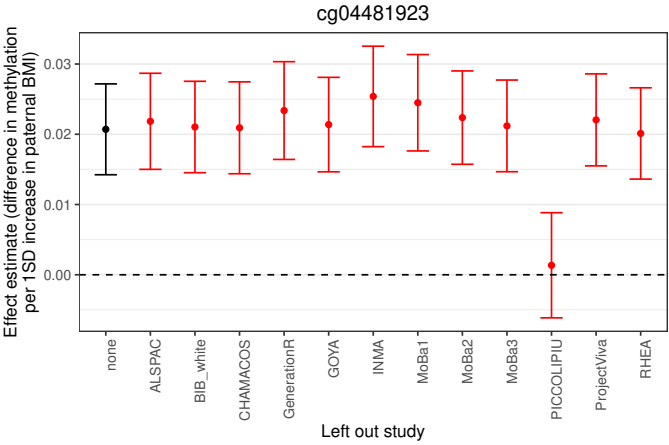

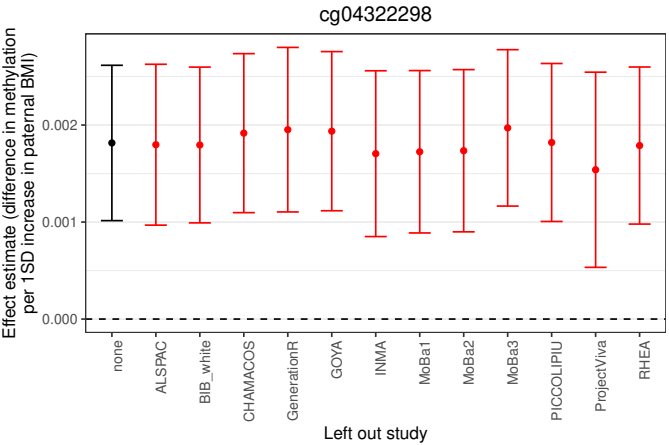

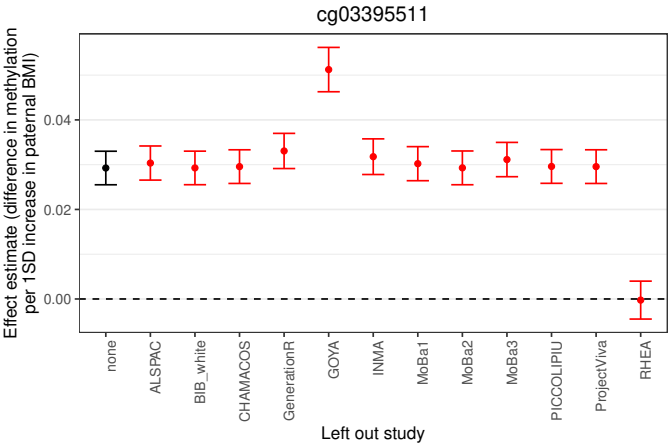

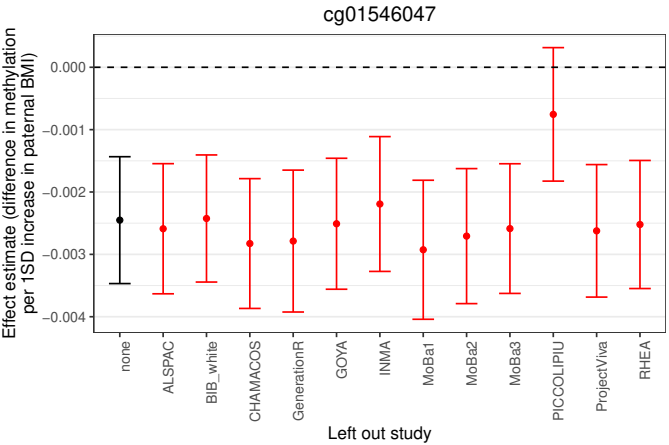

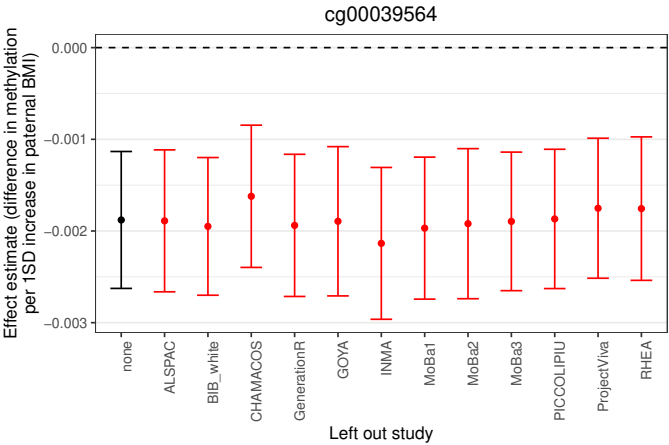

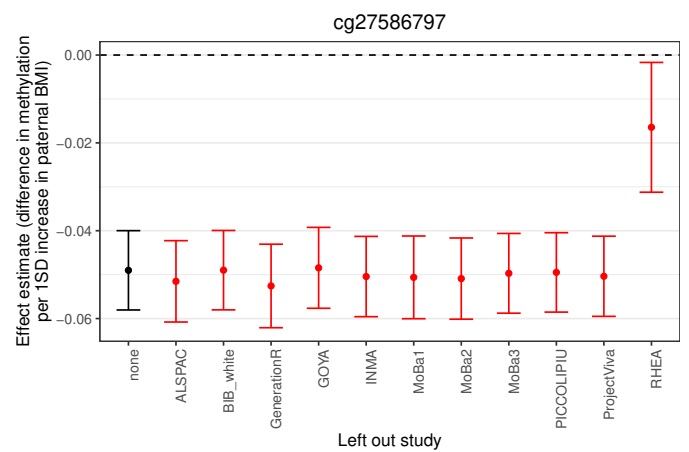

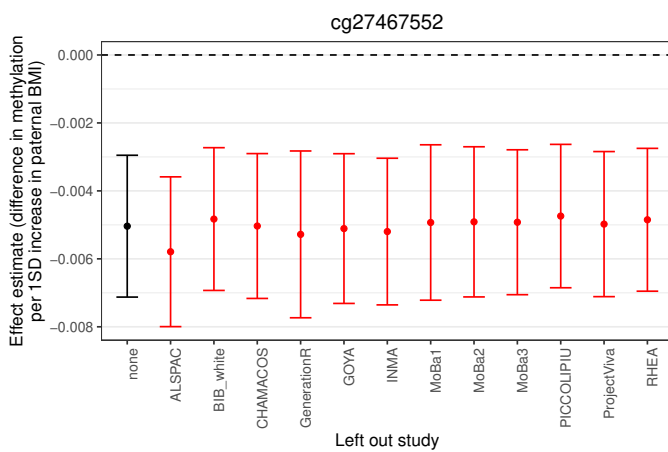

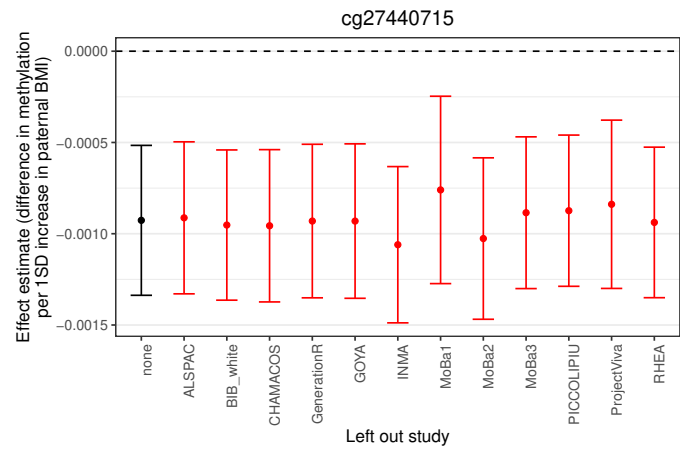

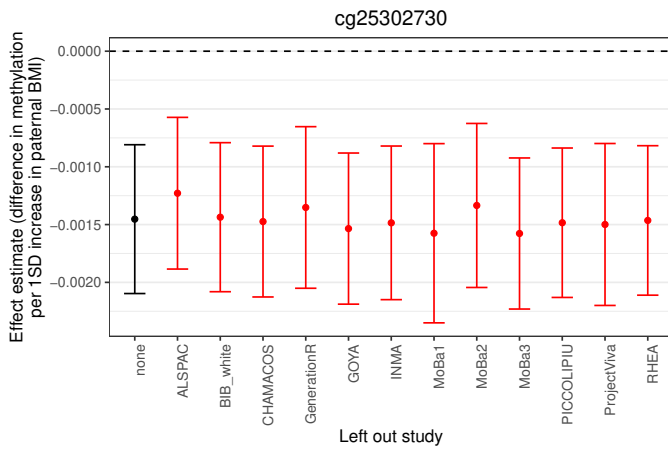

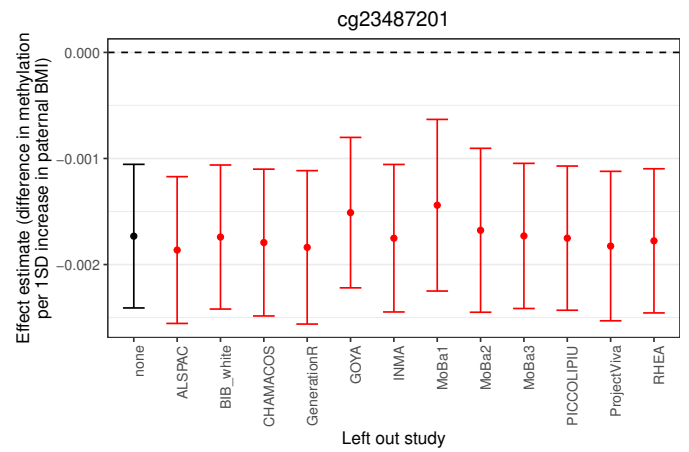

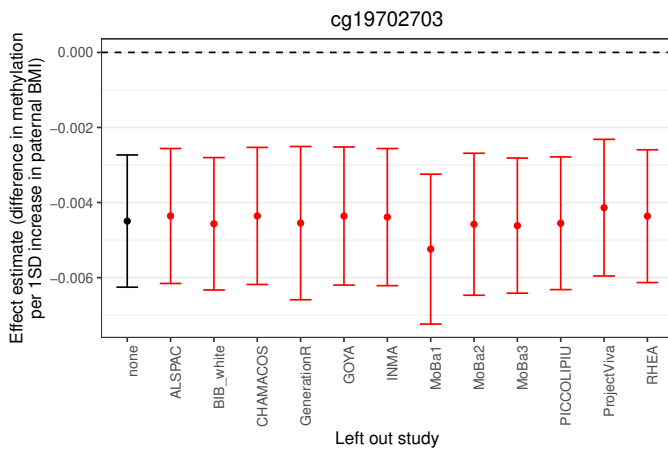

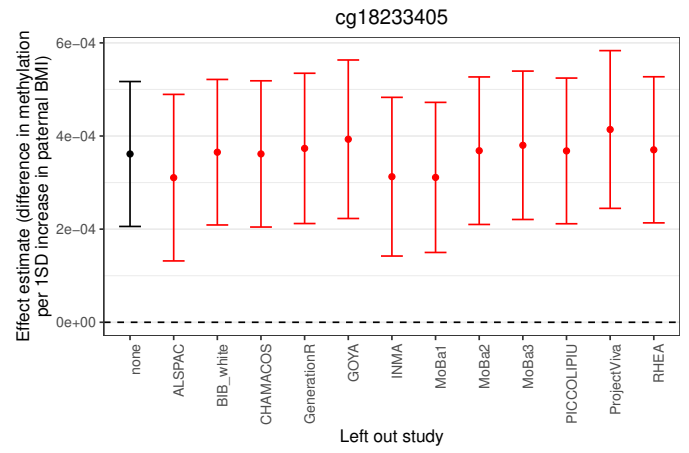

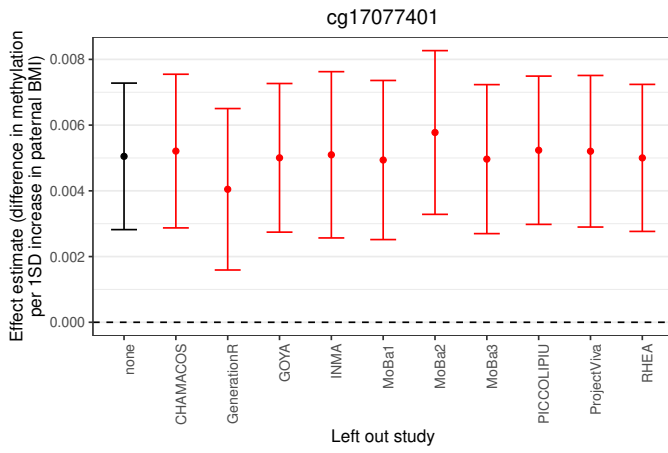

Paternal BMI (adjusted for maternal BMI): pages 6-7

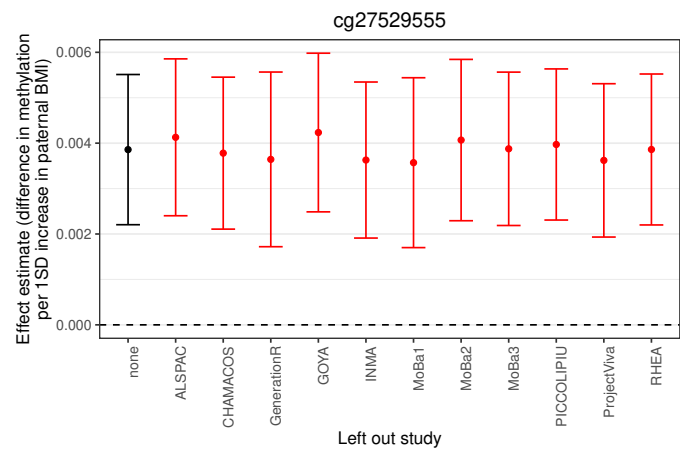

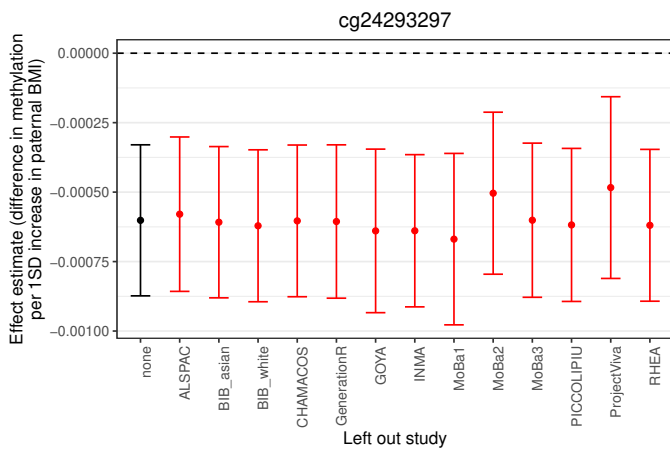

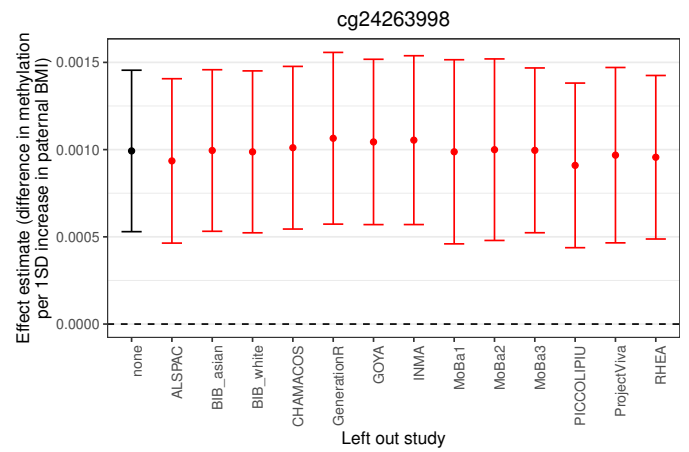

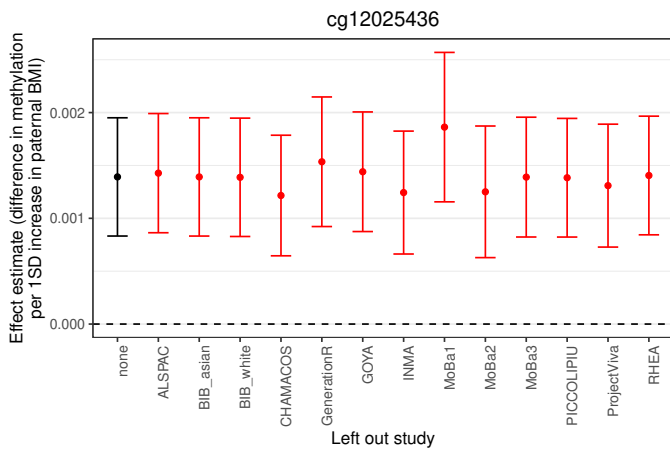

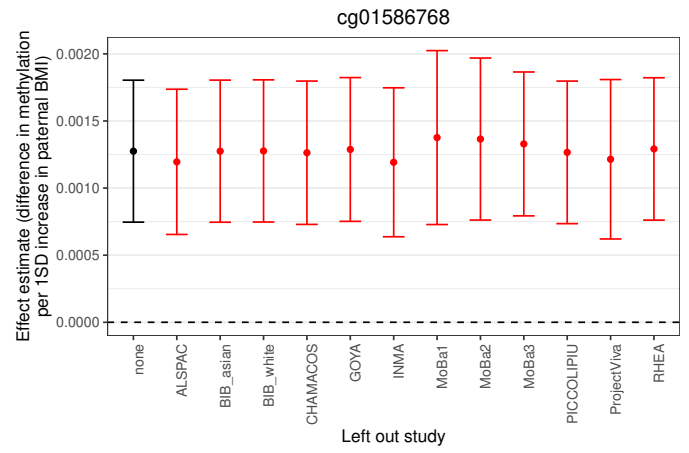

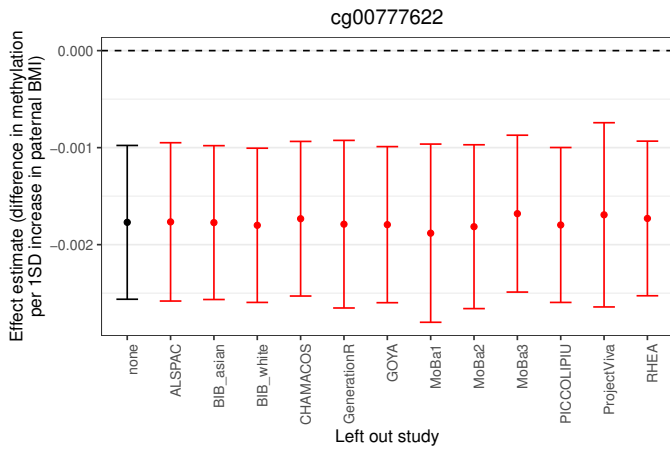

Paternal BMI adjusted for maternal BMI – female offspring
only: pages 9-10

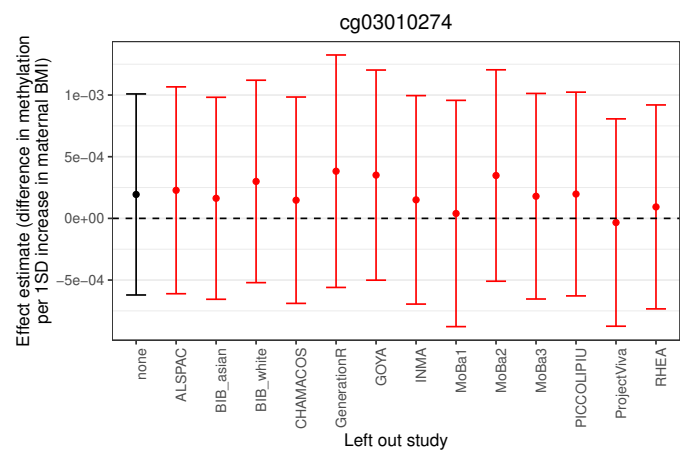

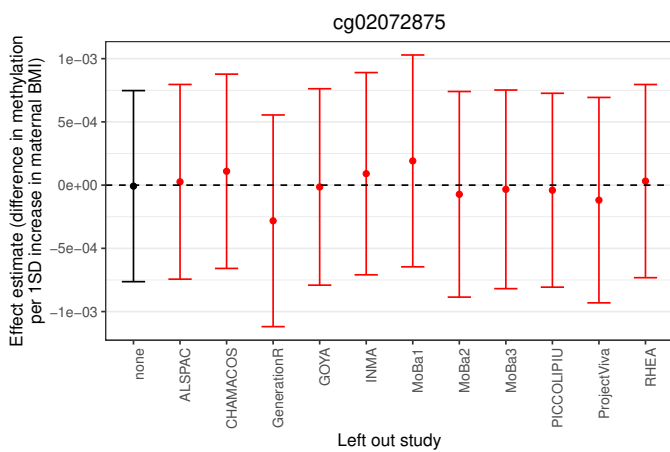

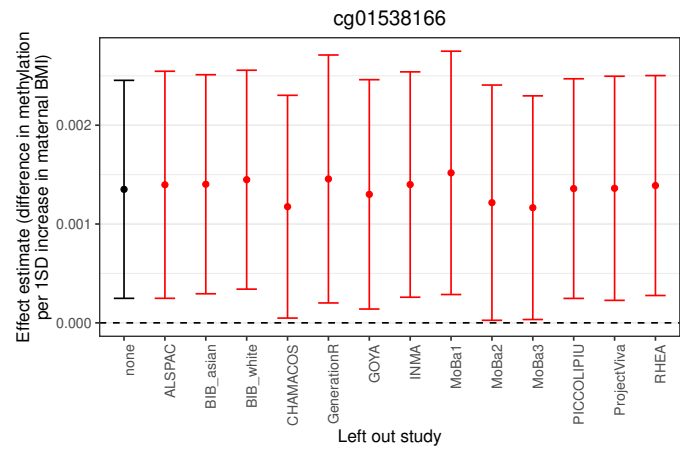

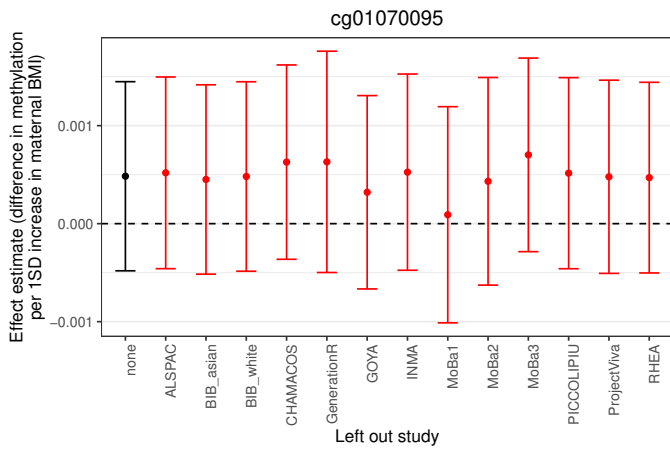

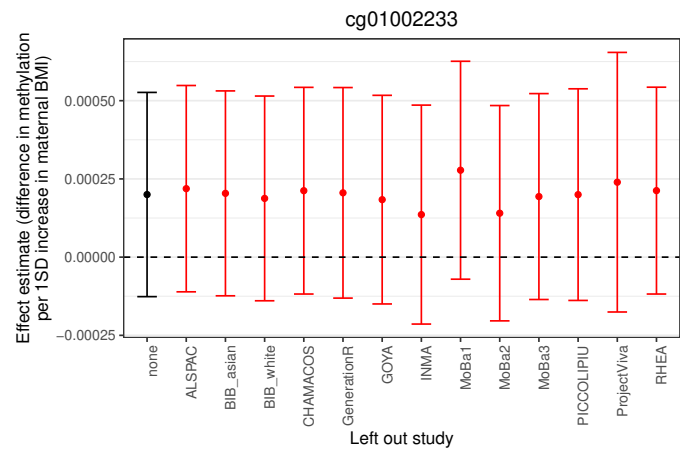

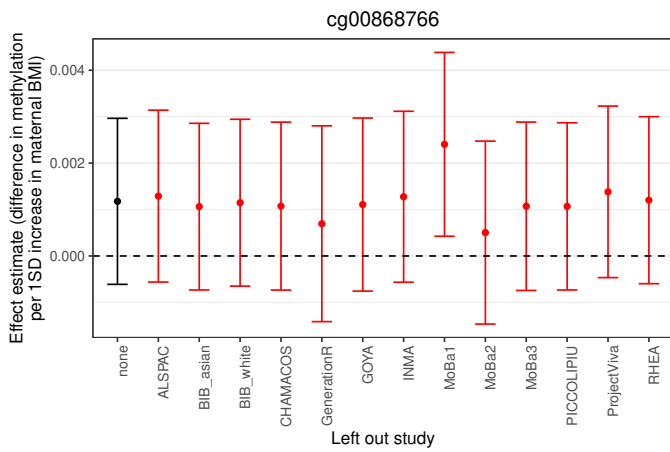

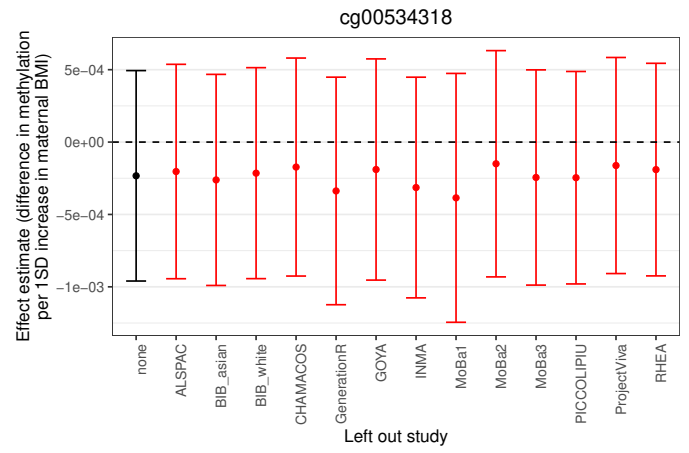

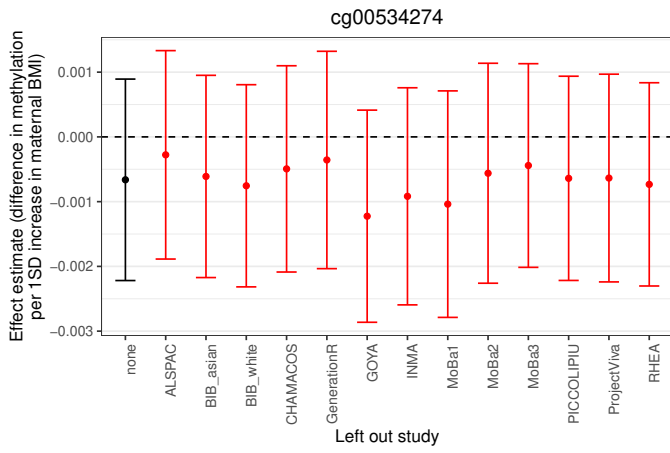

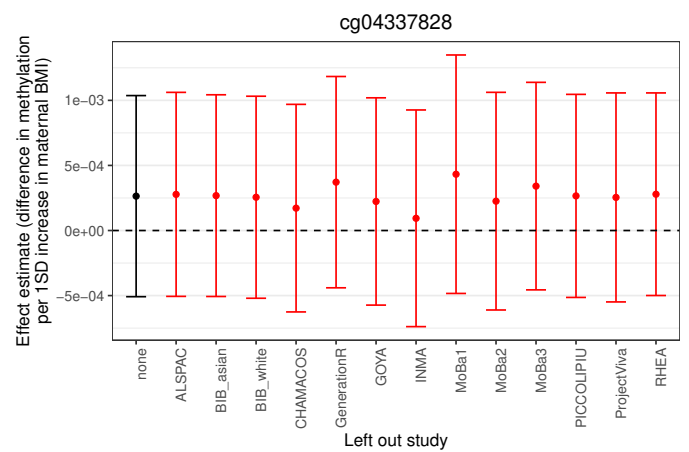

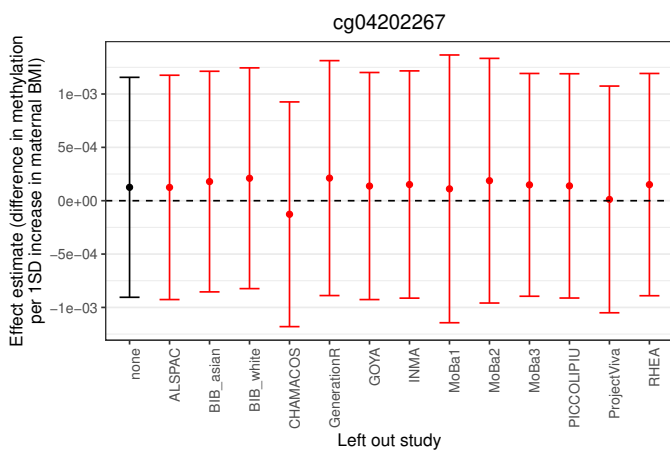

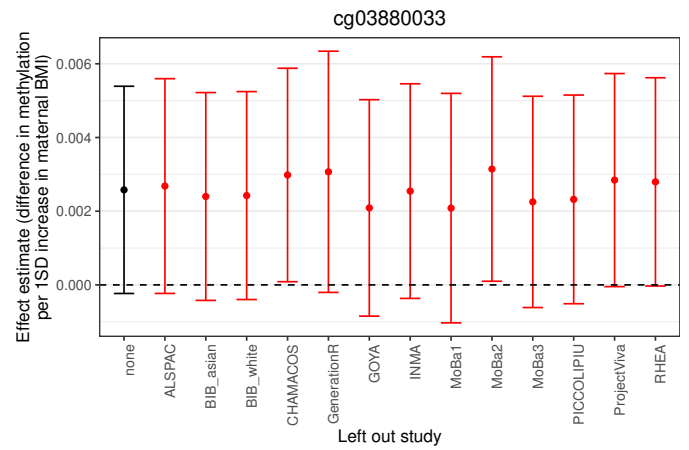

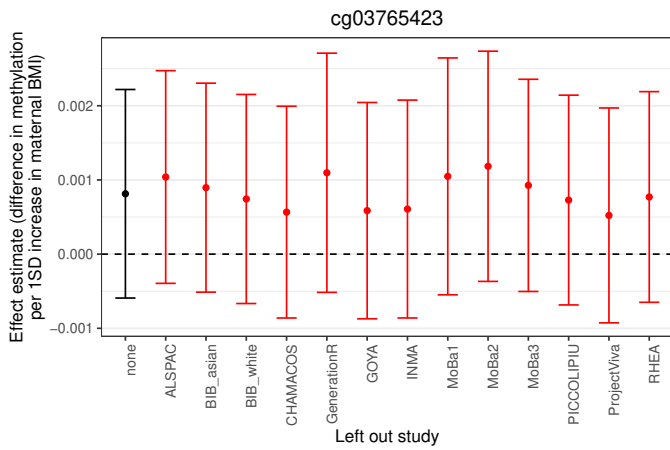

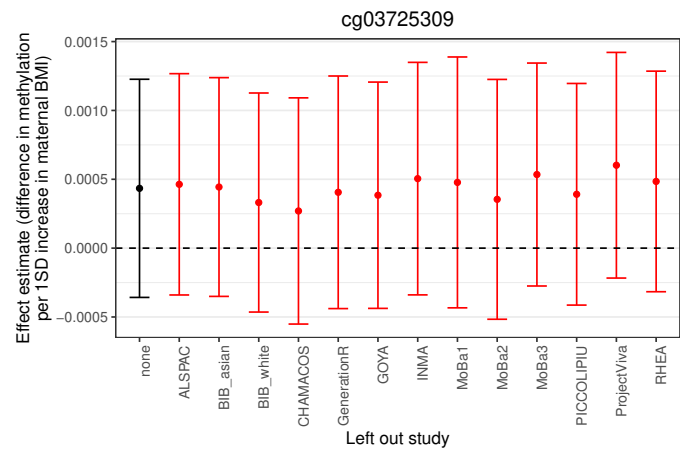

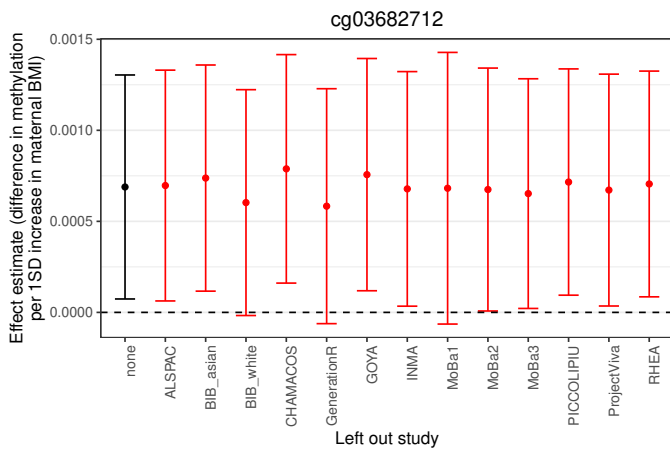

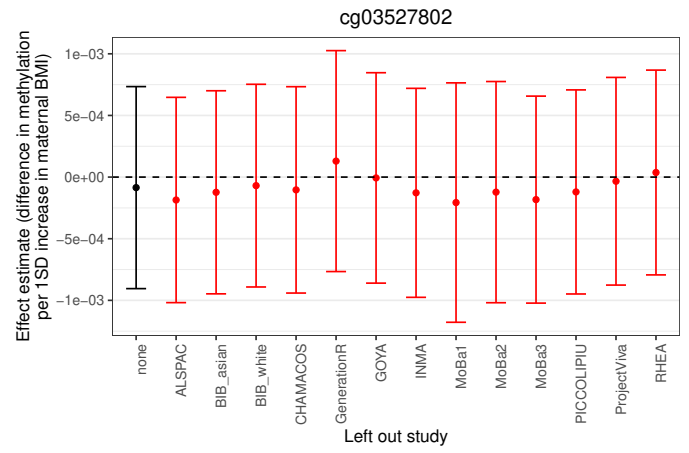

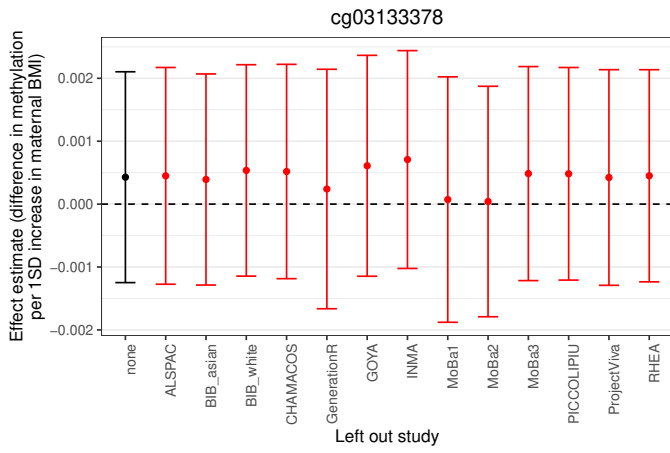

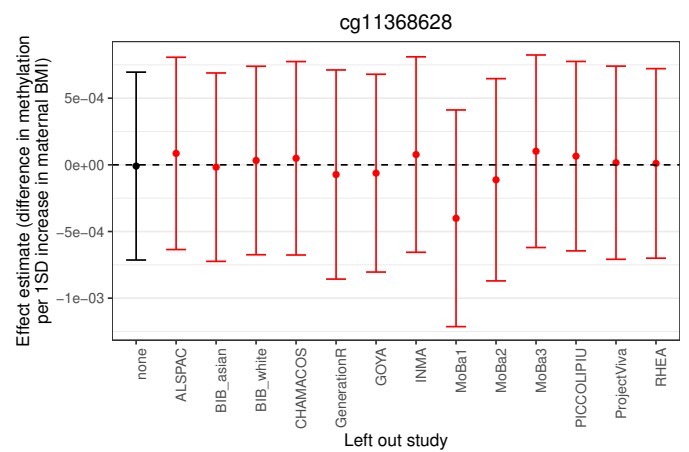

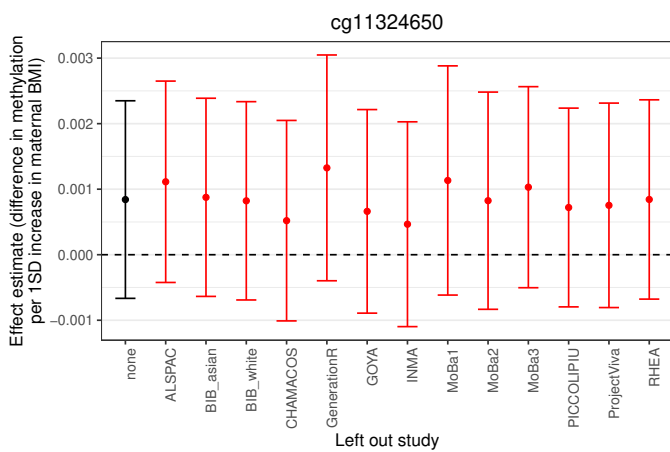

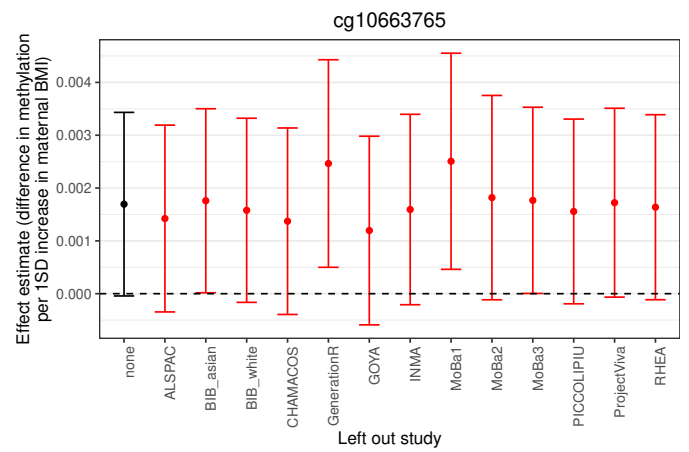

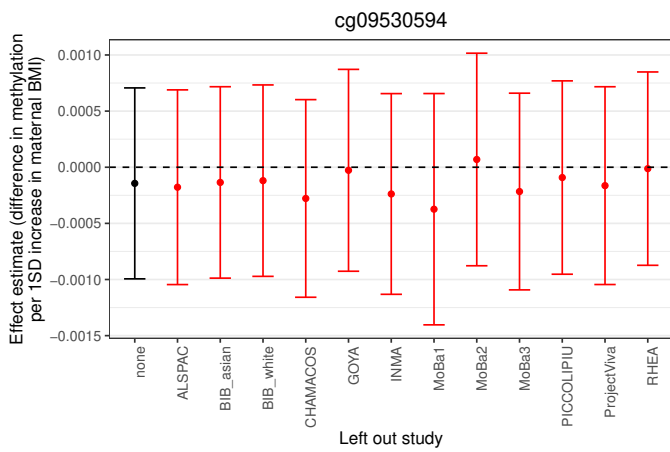

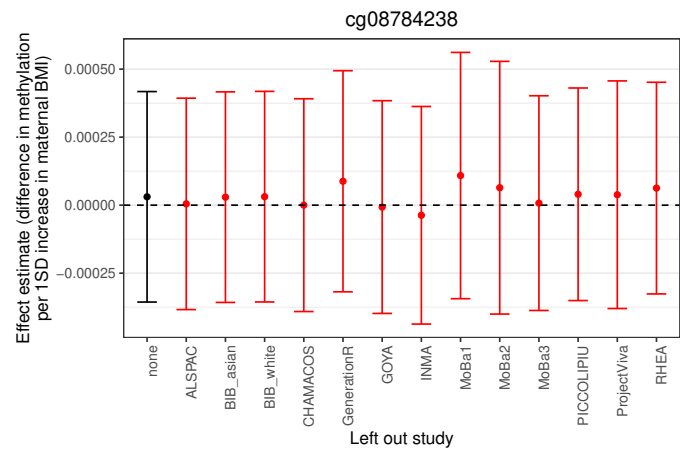

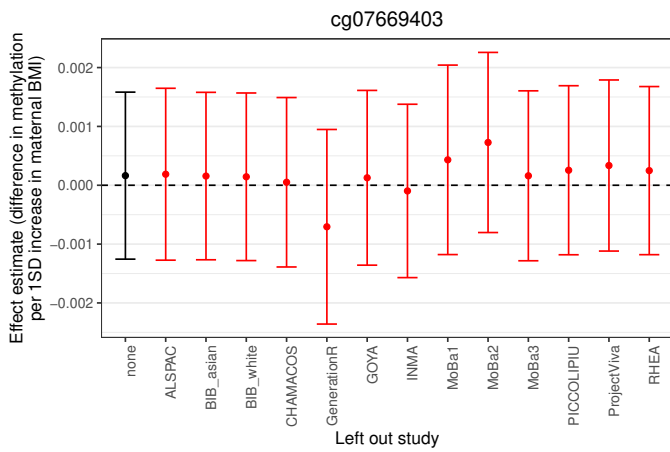

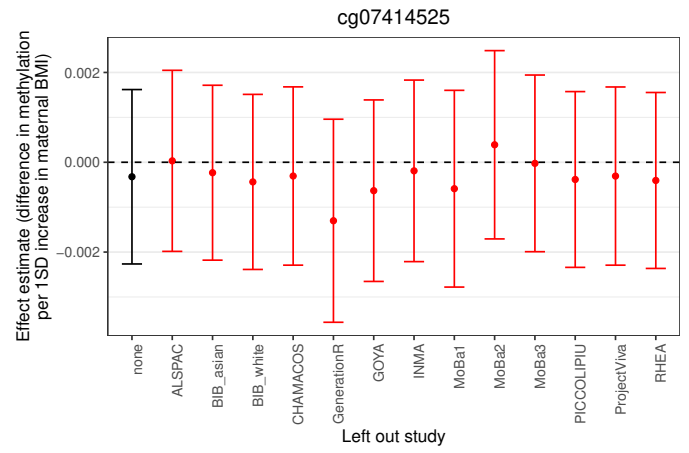

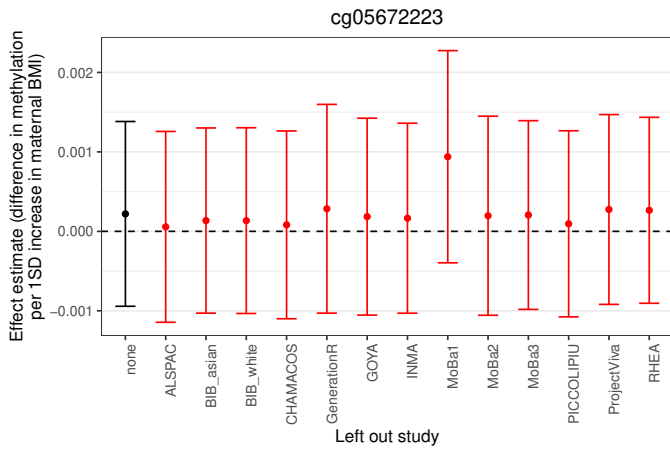

Paternal BMI adjusted for maternal BMI – male offspring
only: page 12

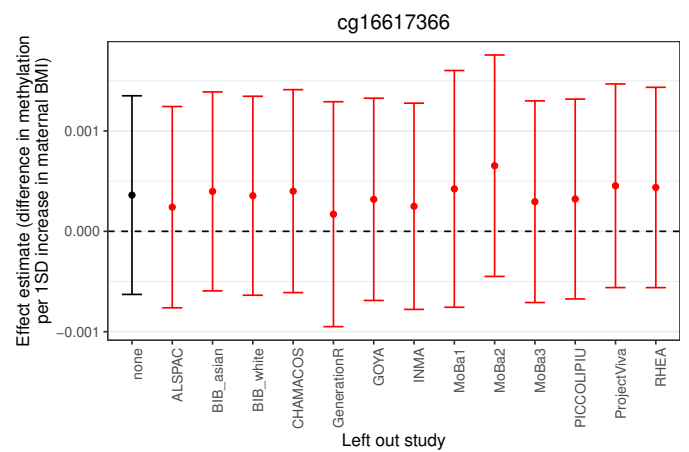

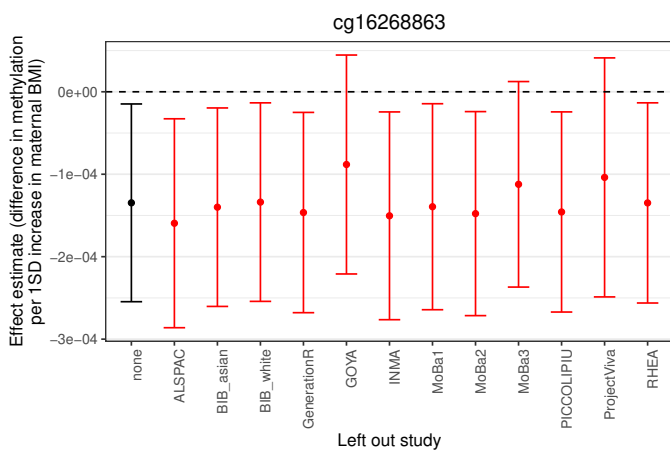

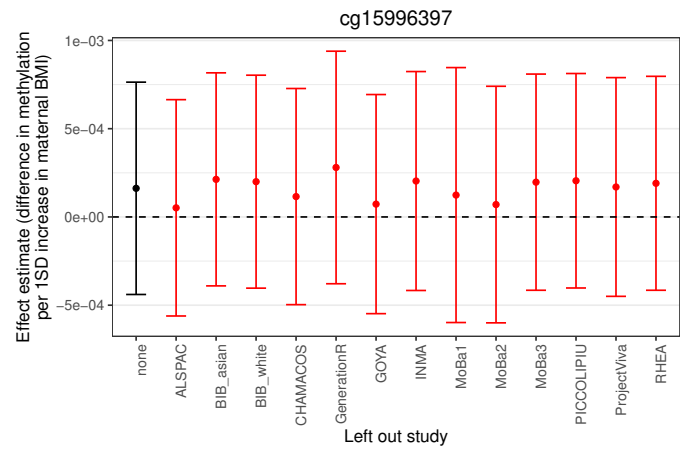

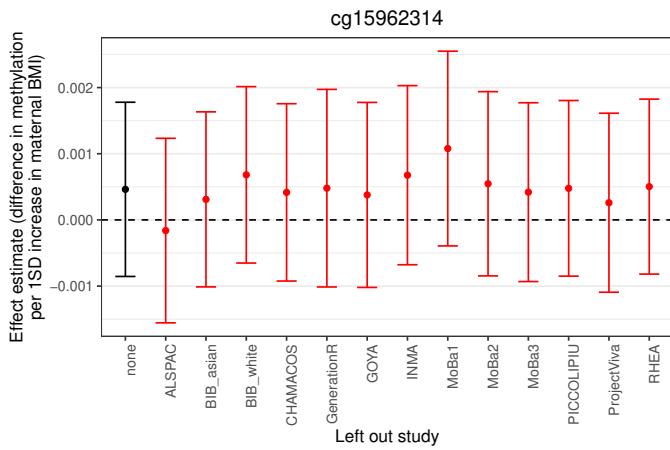

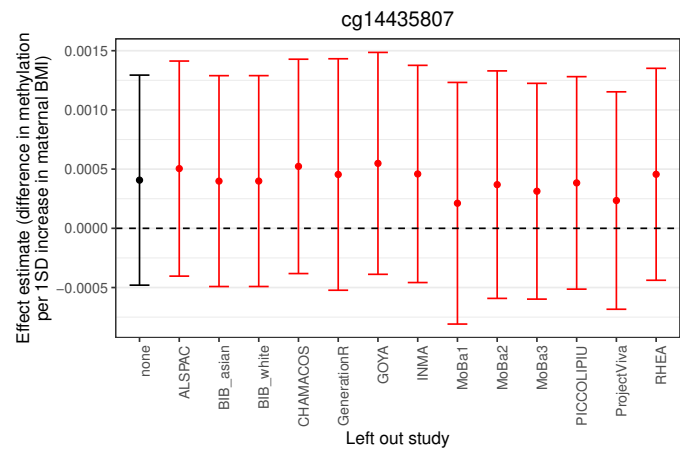

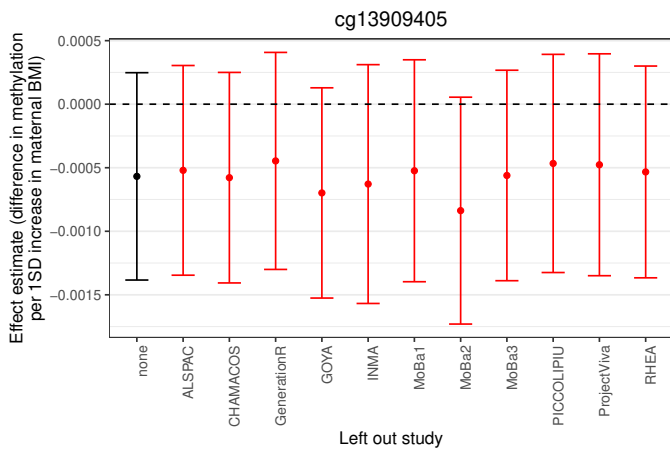

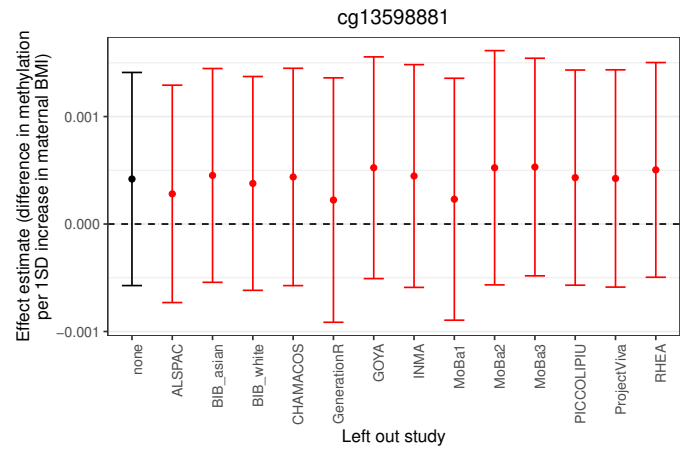

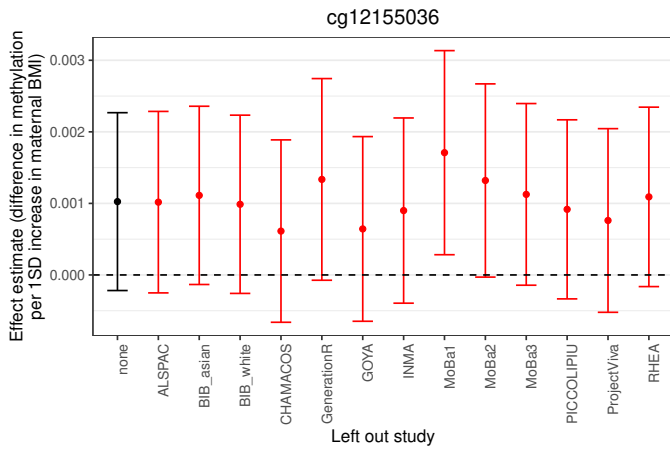

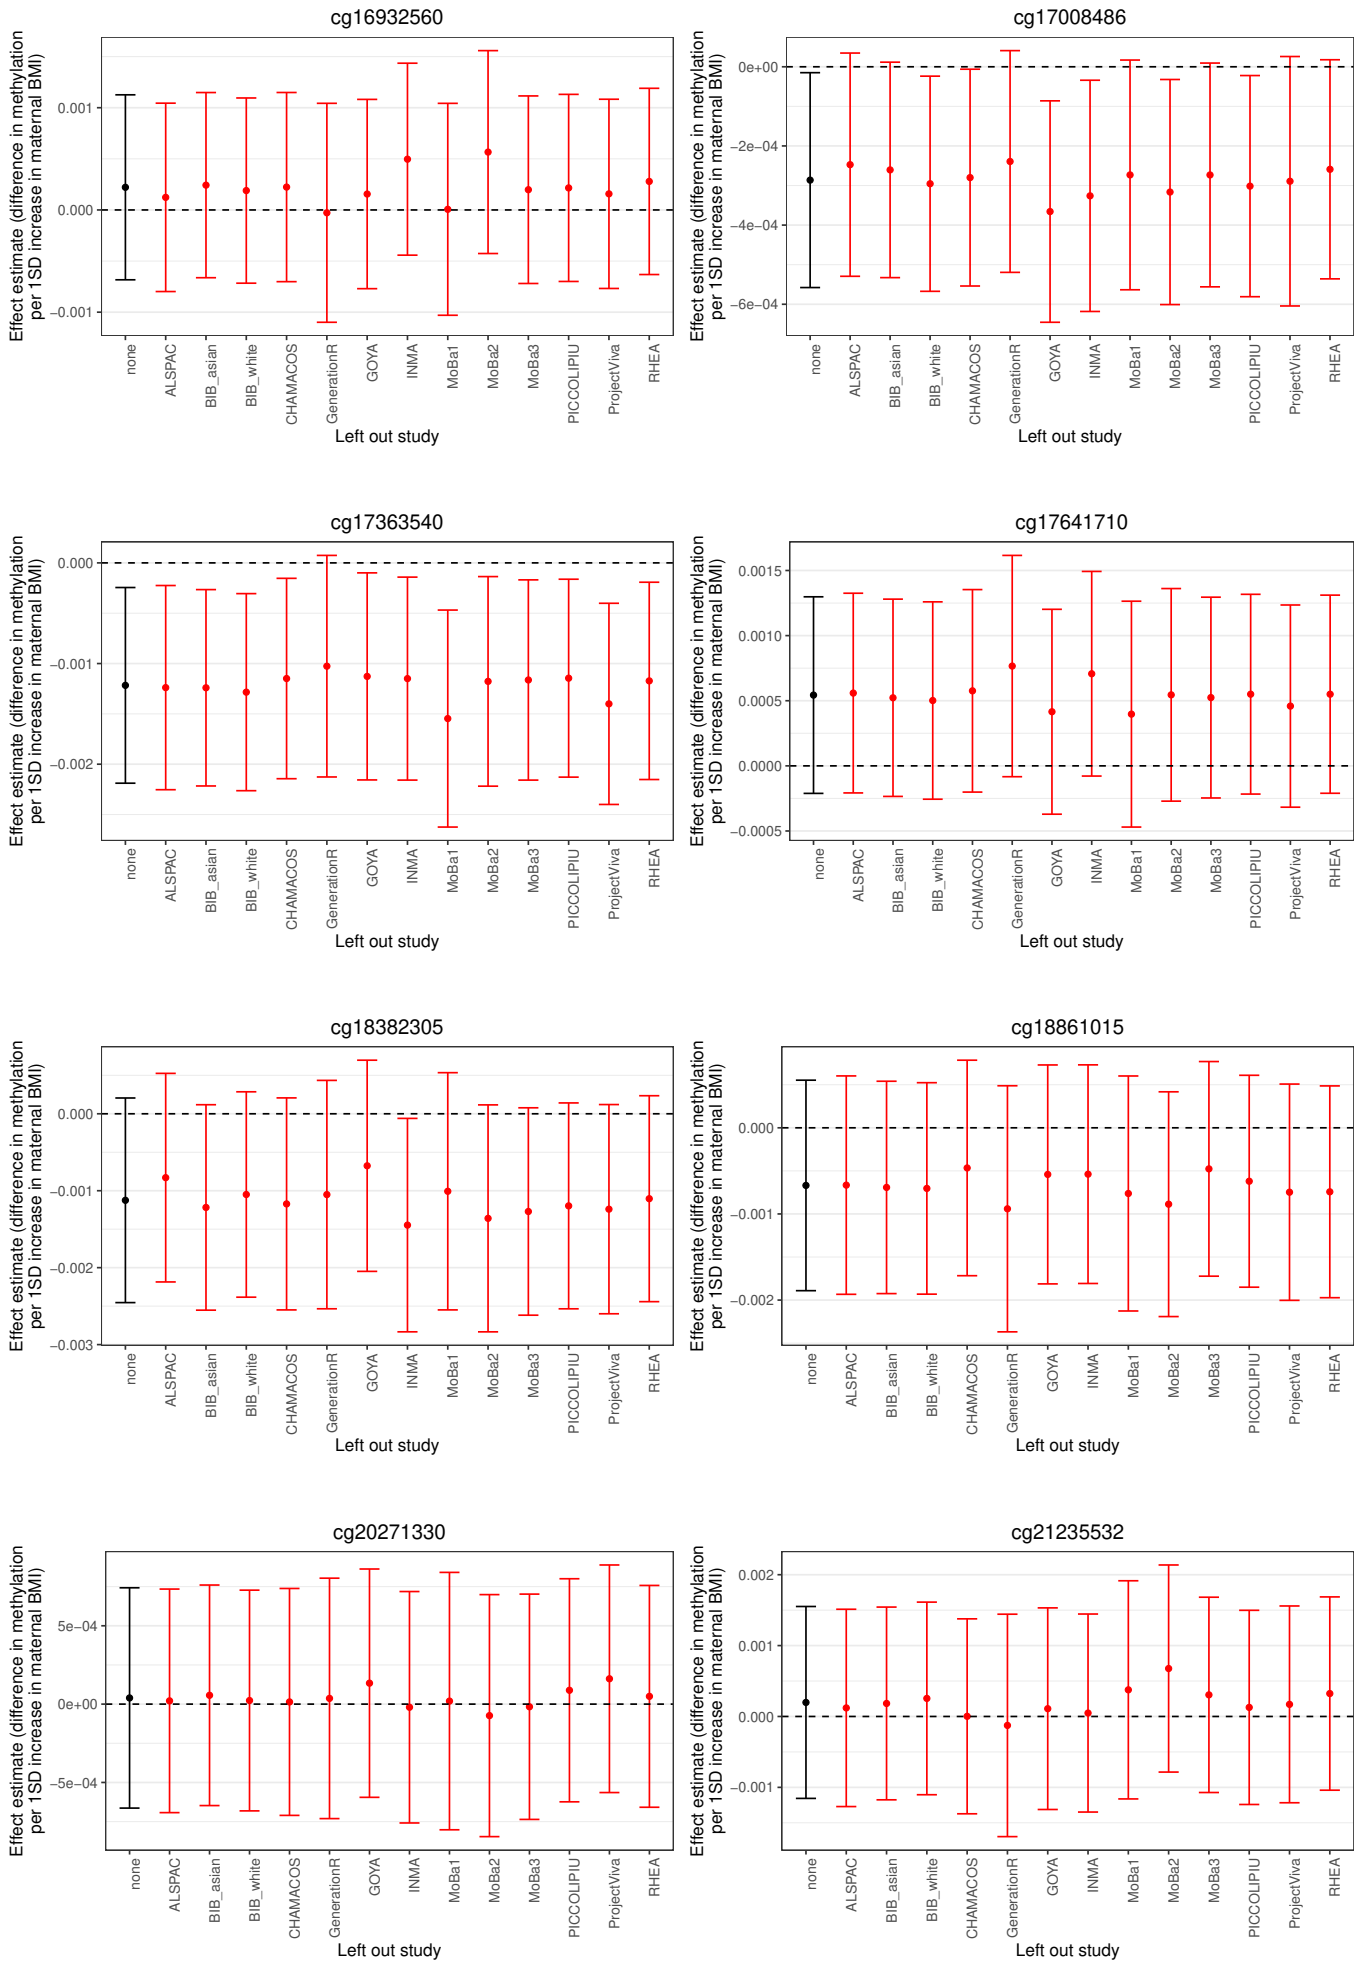

Maternal BMI (unadjusted for paternal BMI): pages 14-20

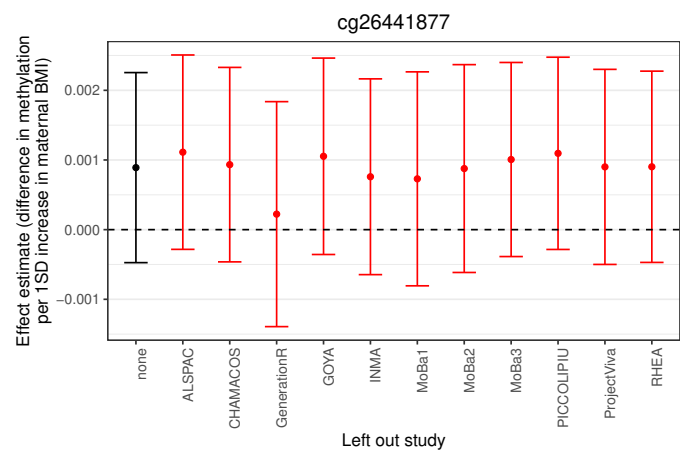

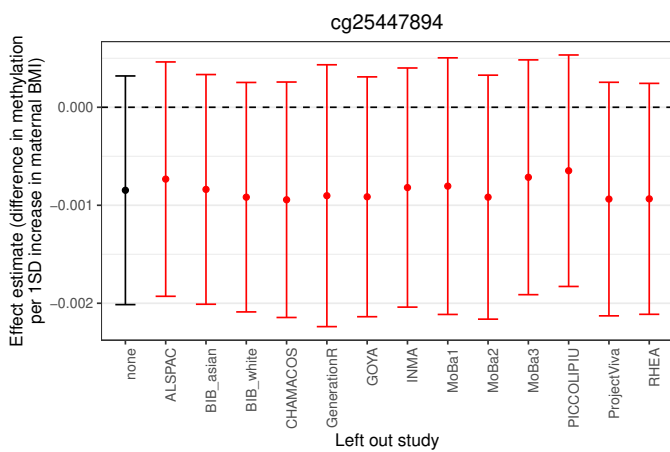

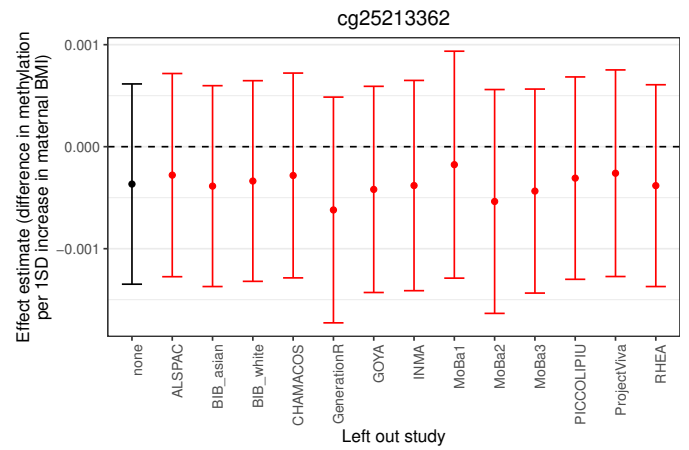

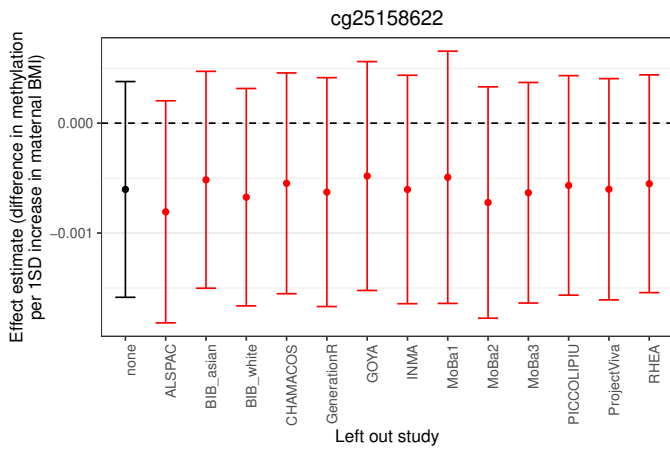

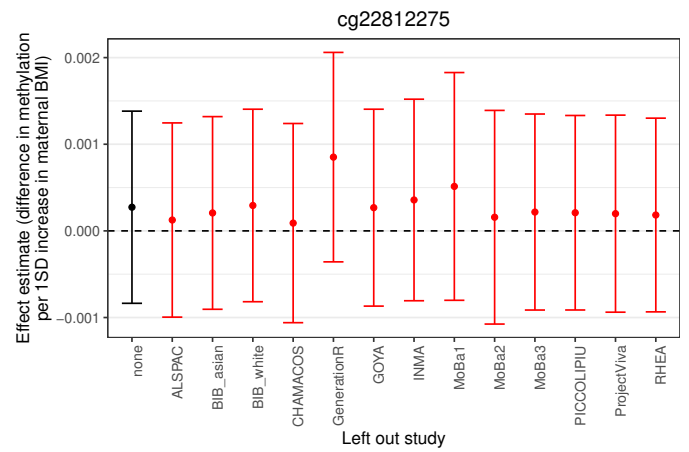

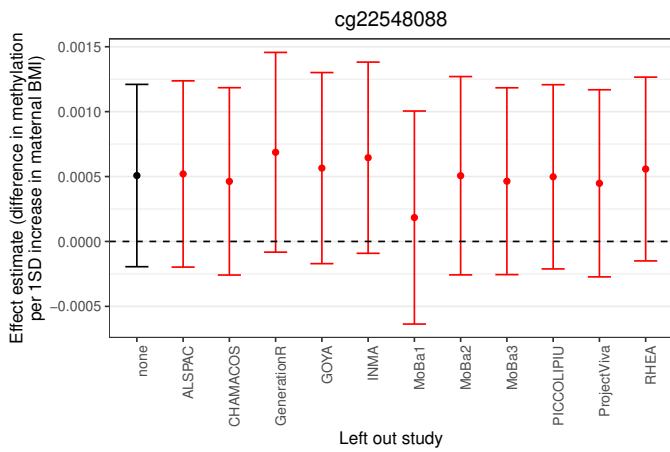

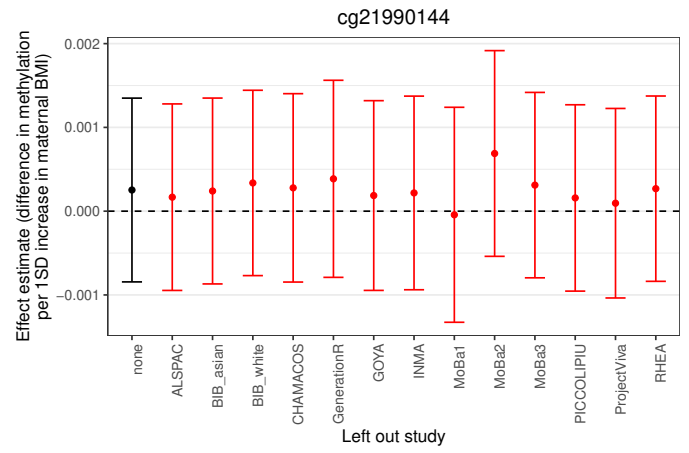

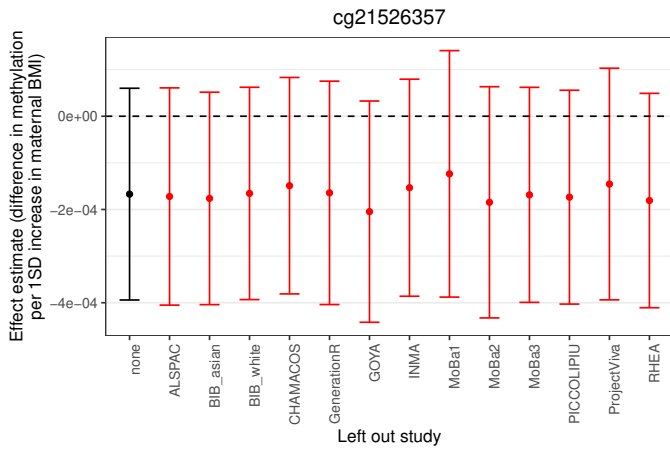

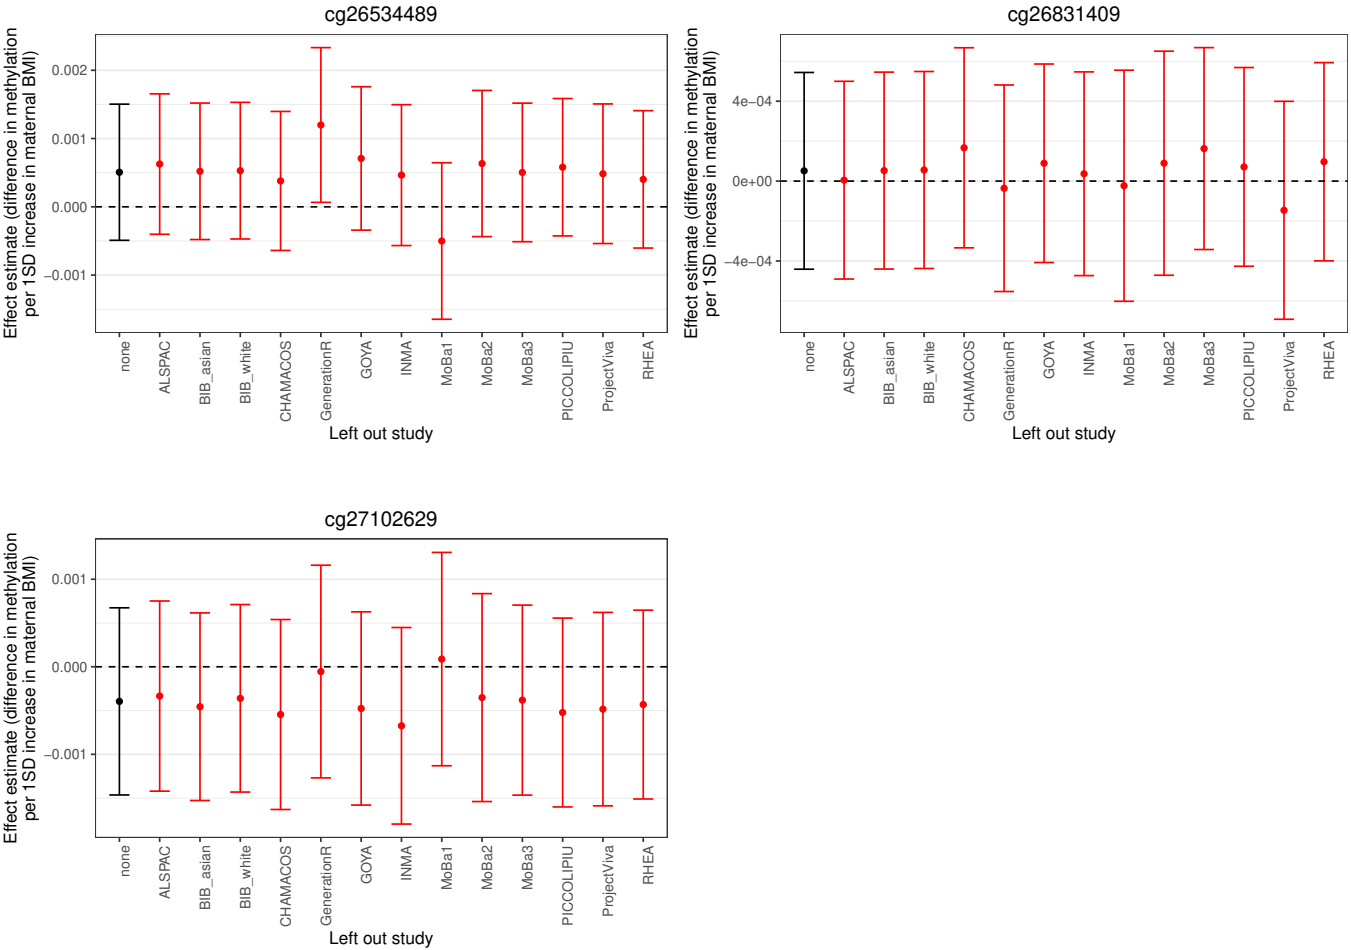

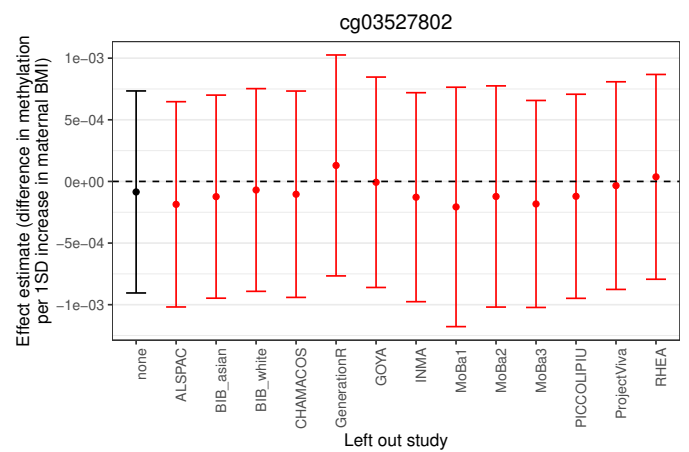

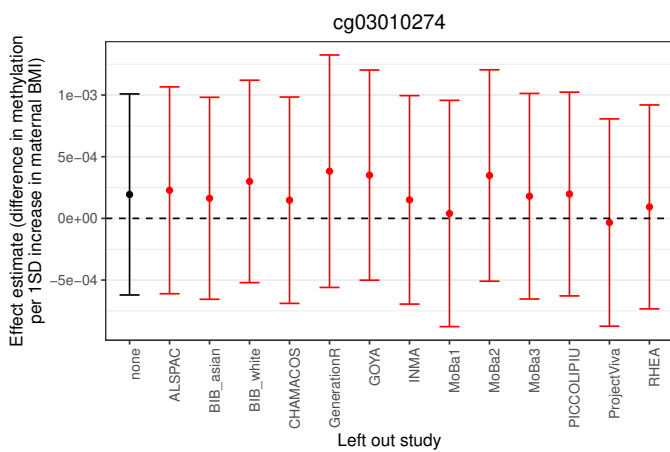

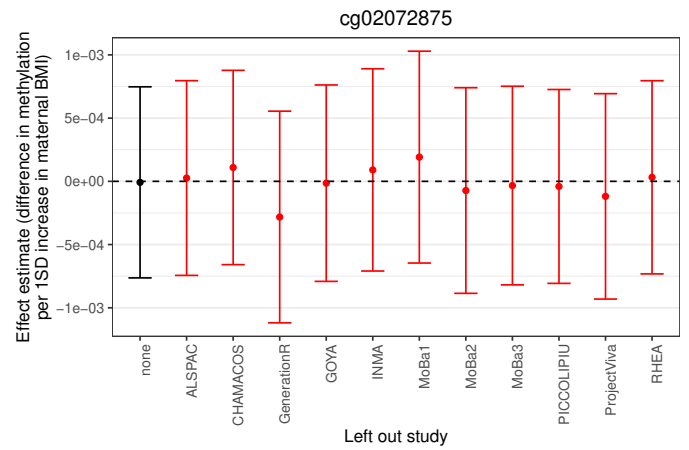

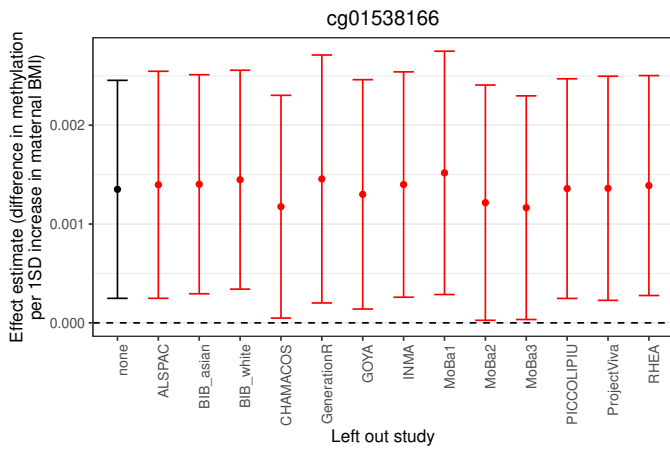

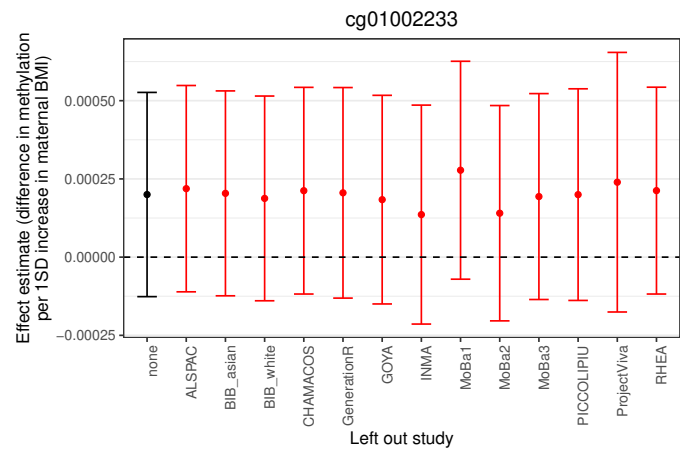

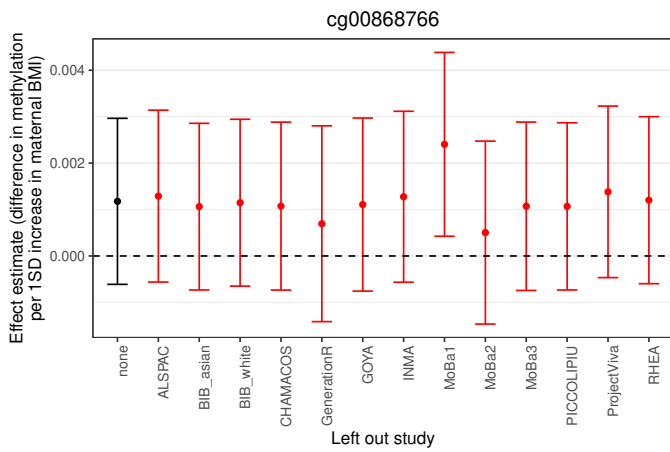

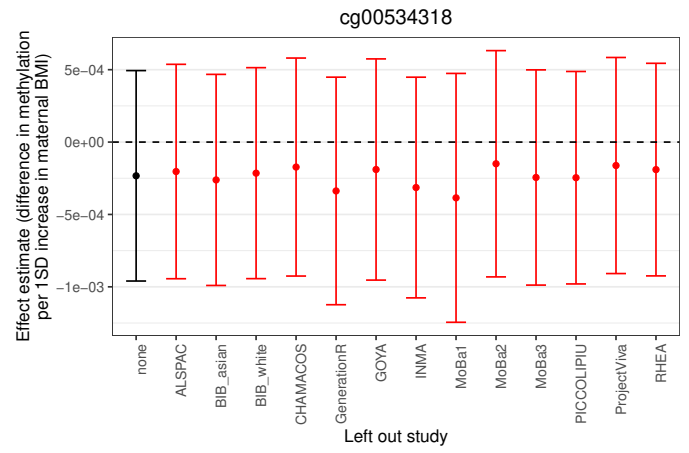

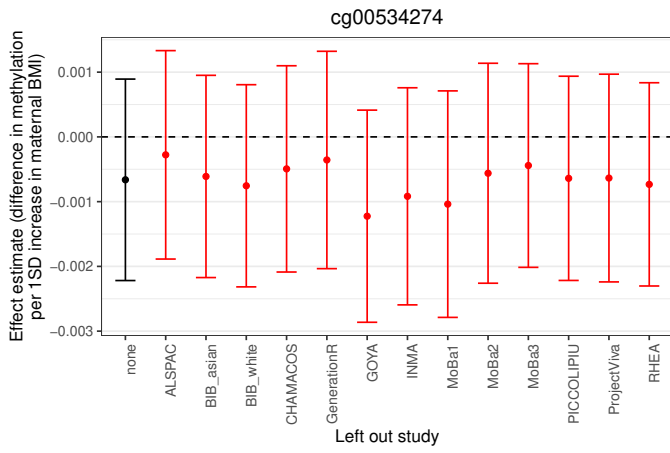

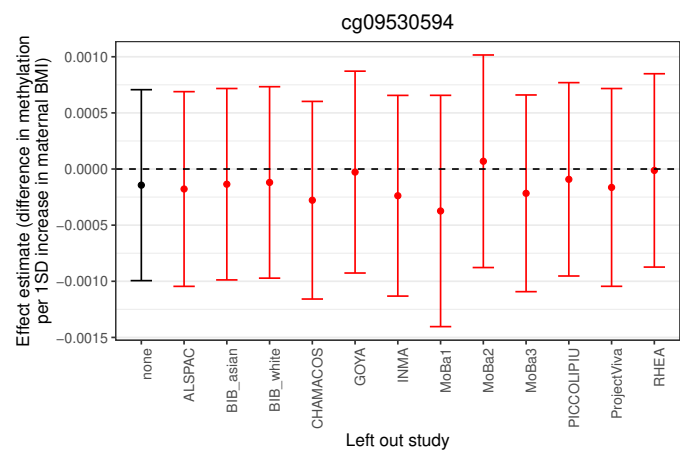

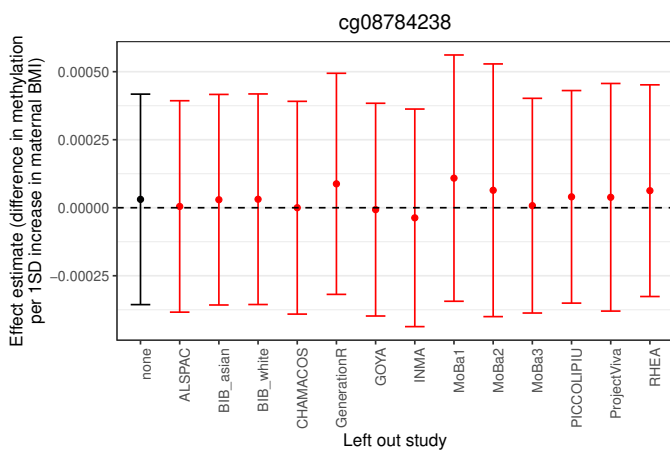

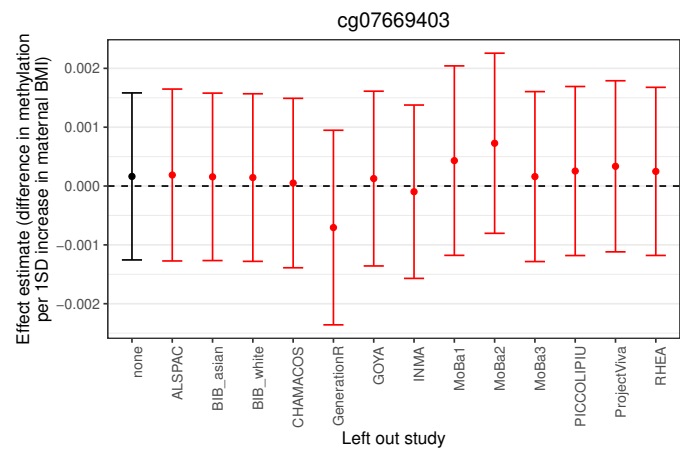

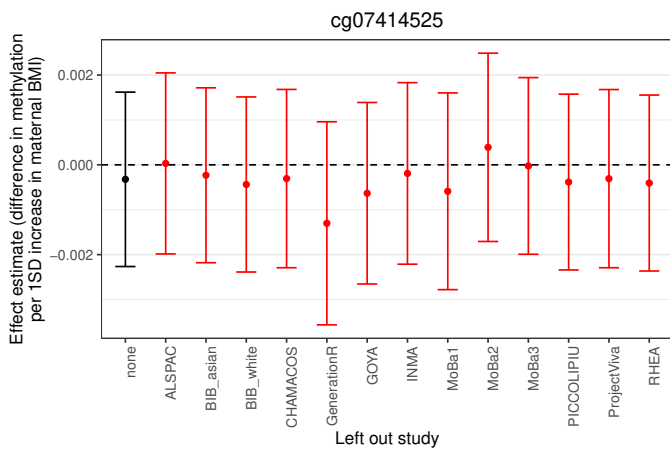

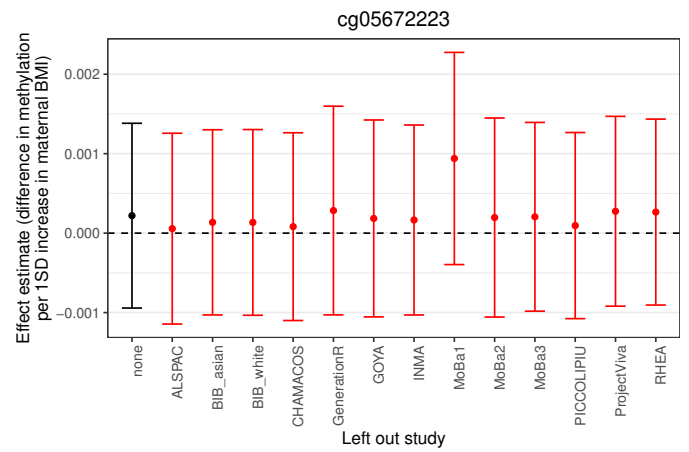

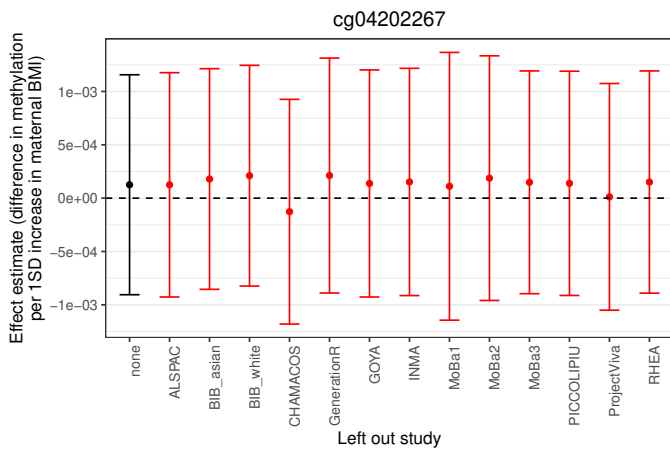

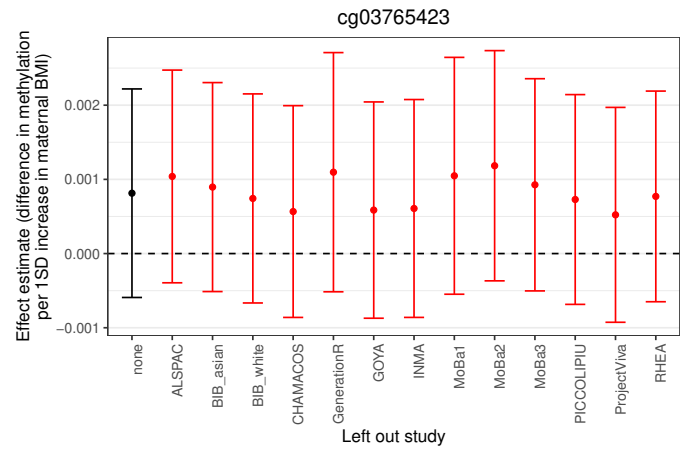

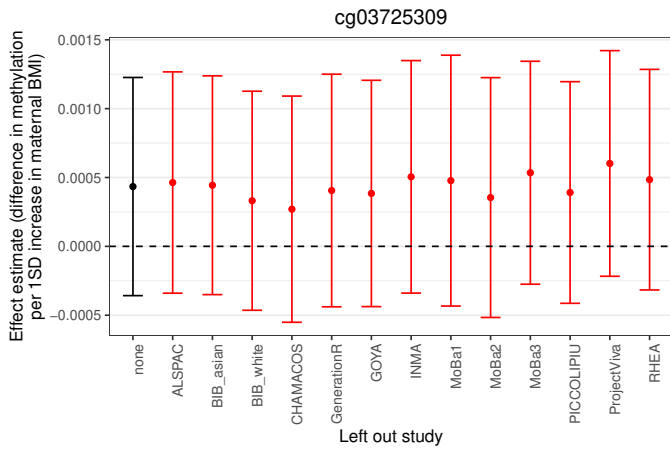

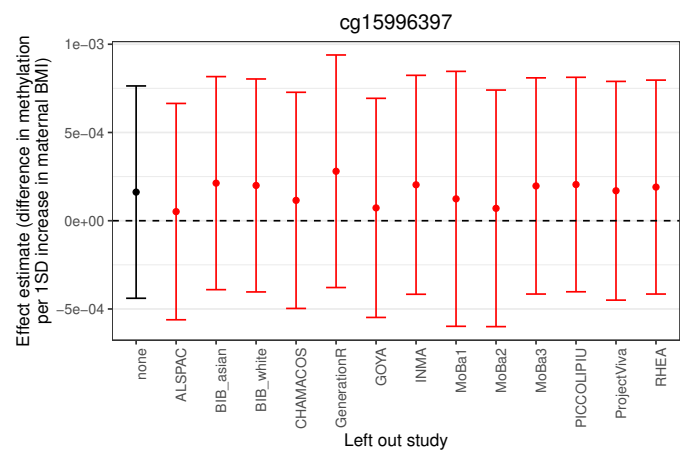

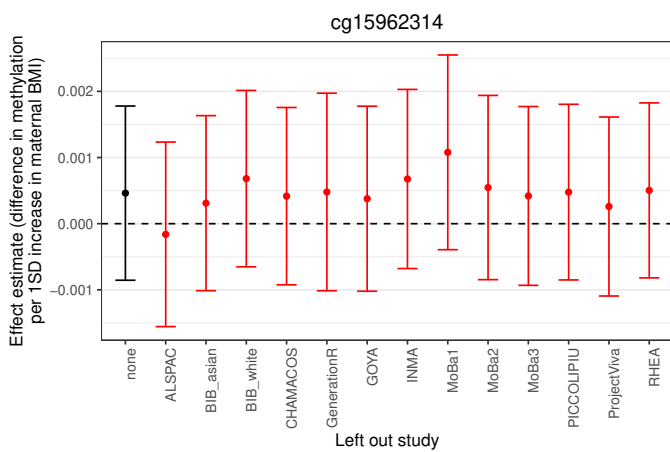

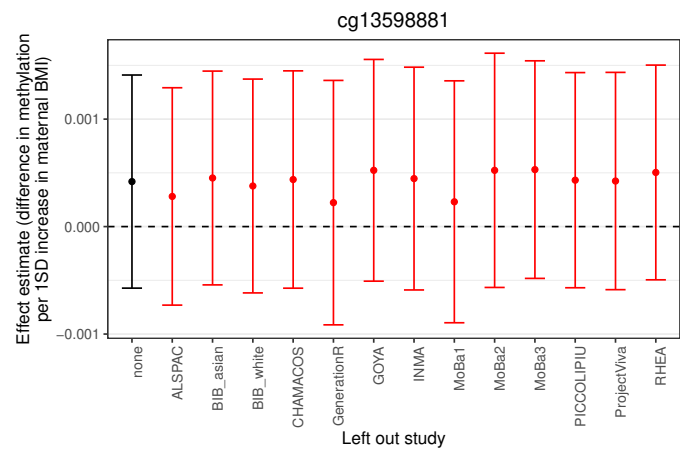

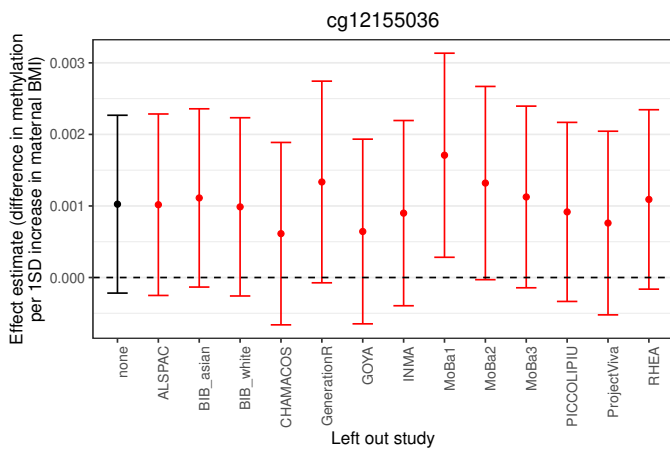

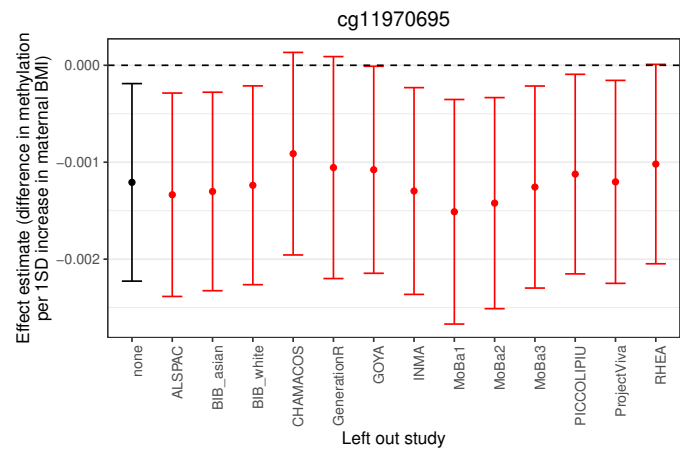

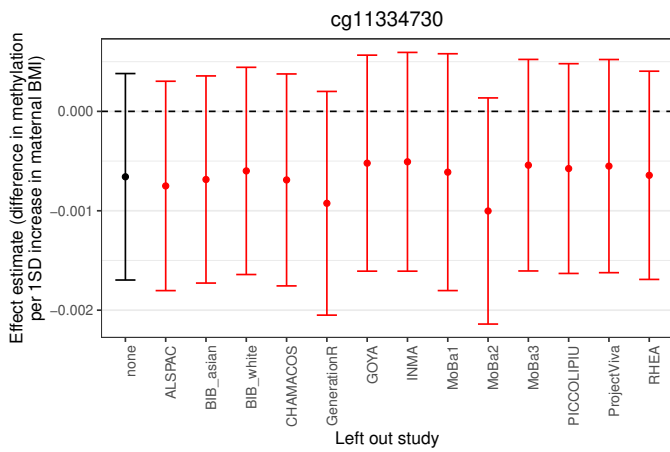

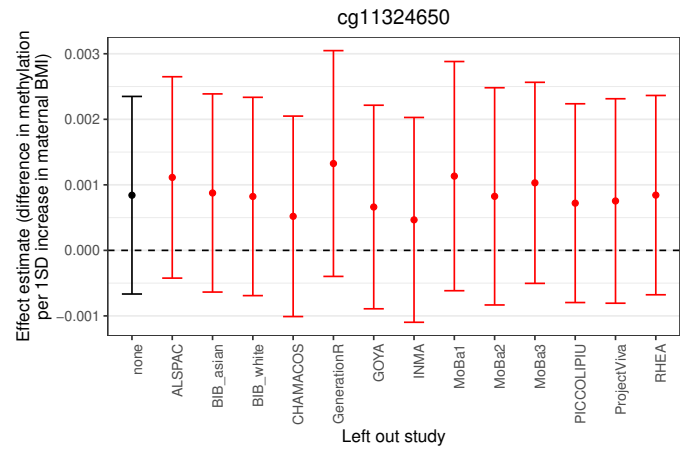

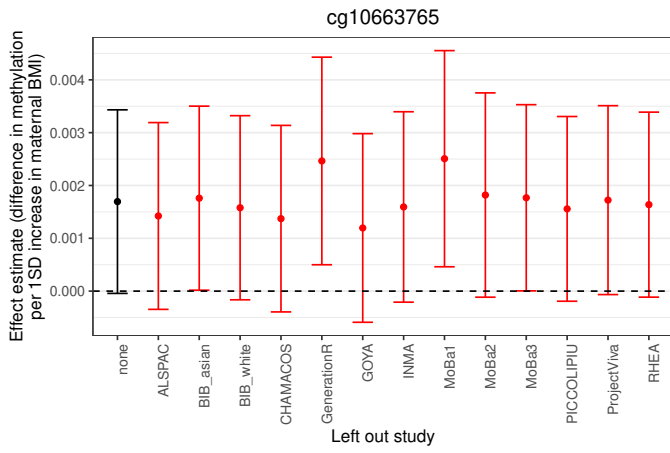

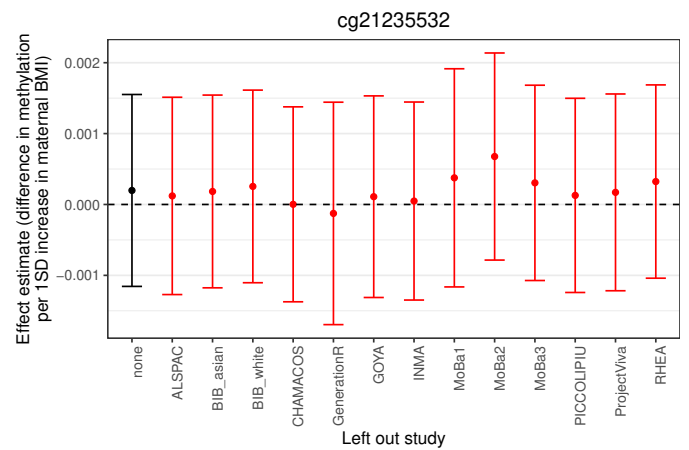

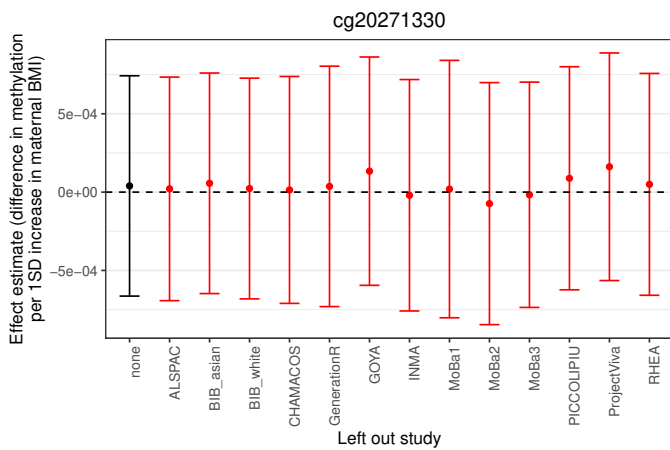

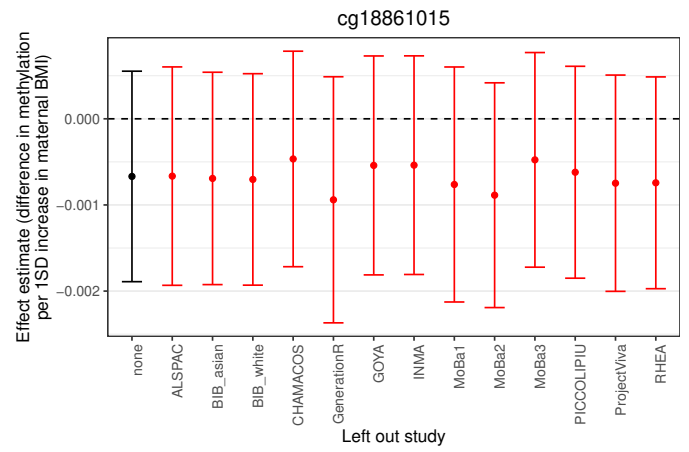

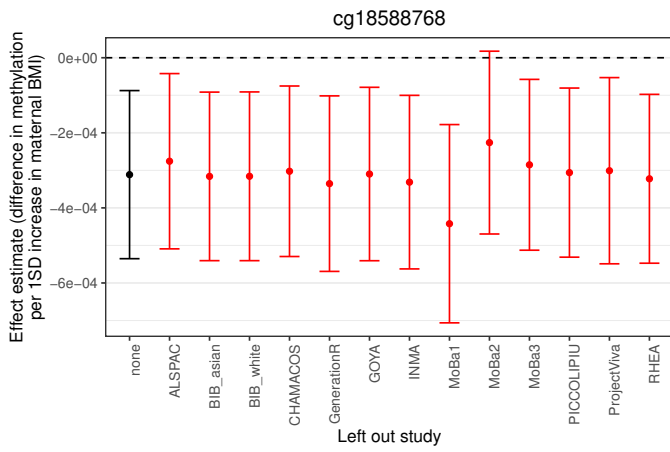

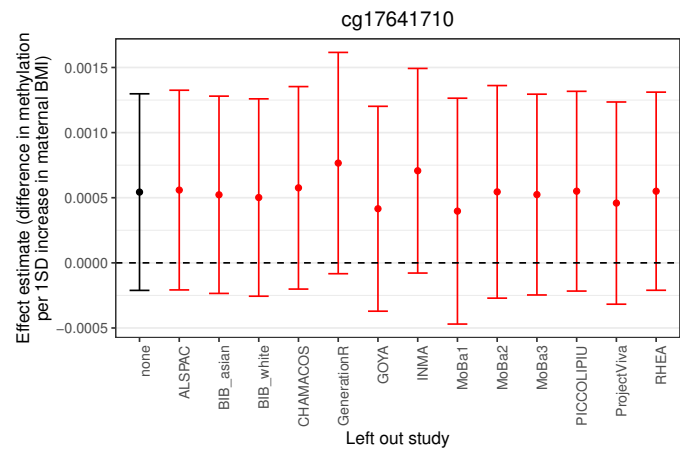

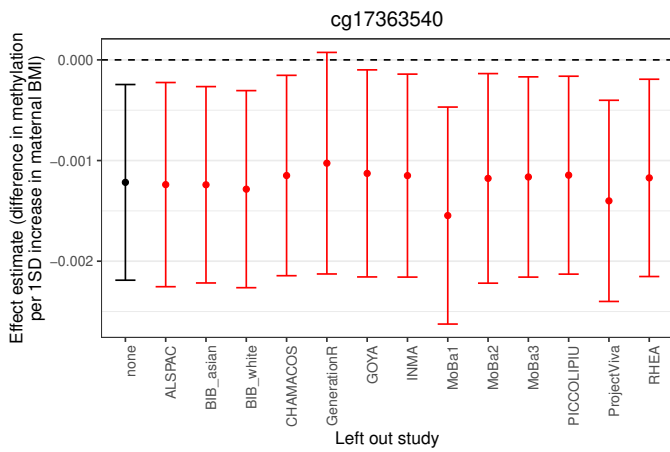

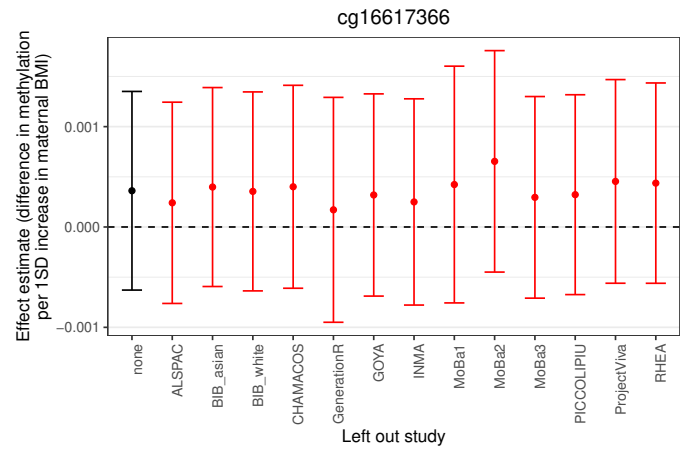

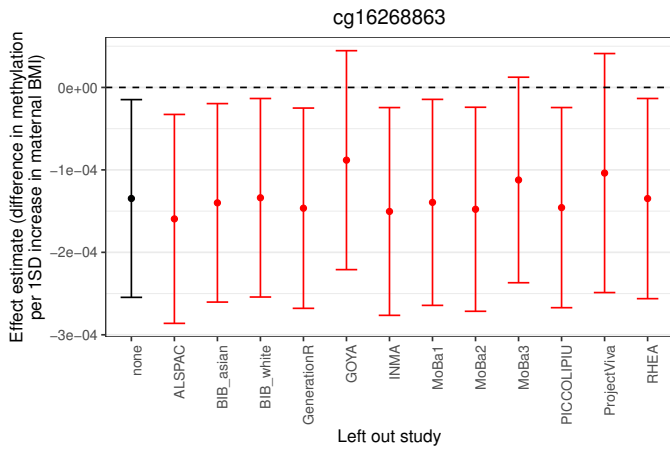

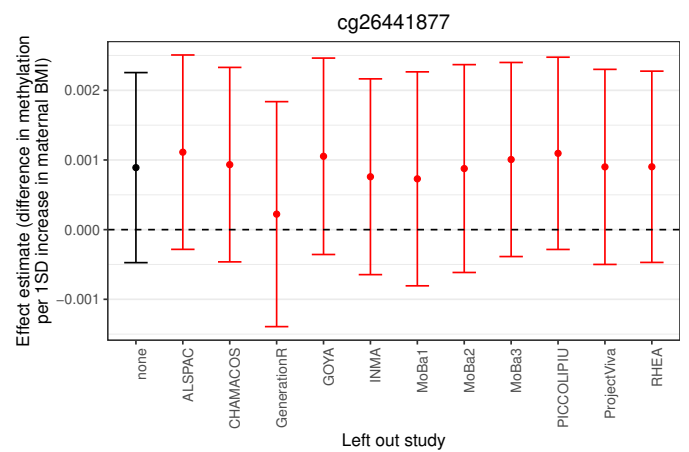

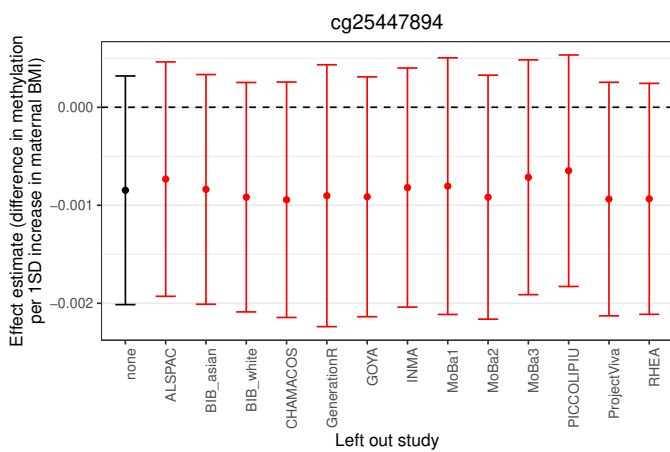

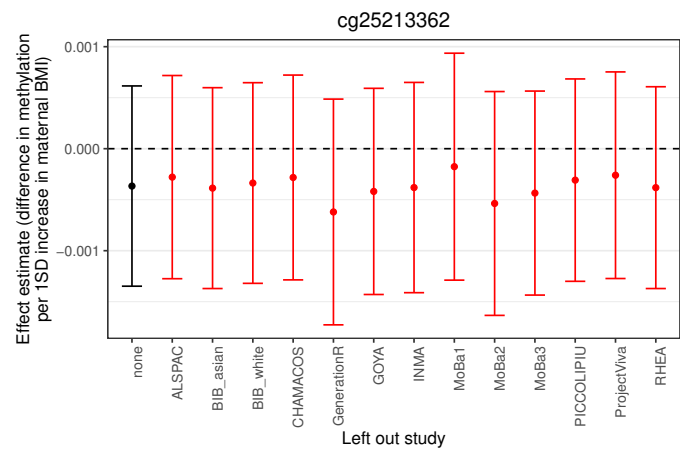

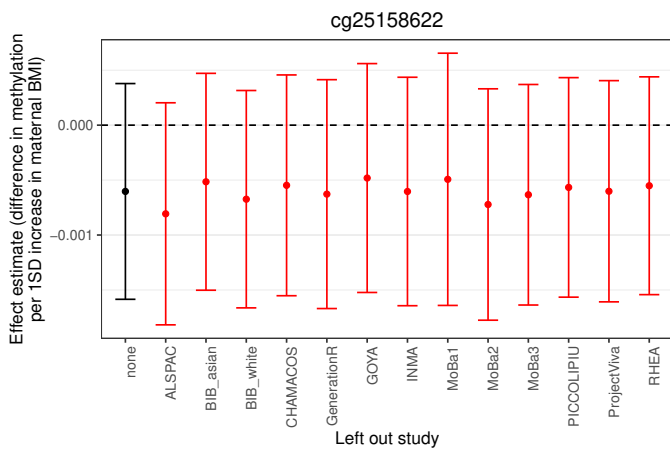

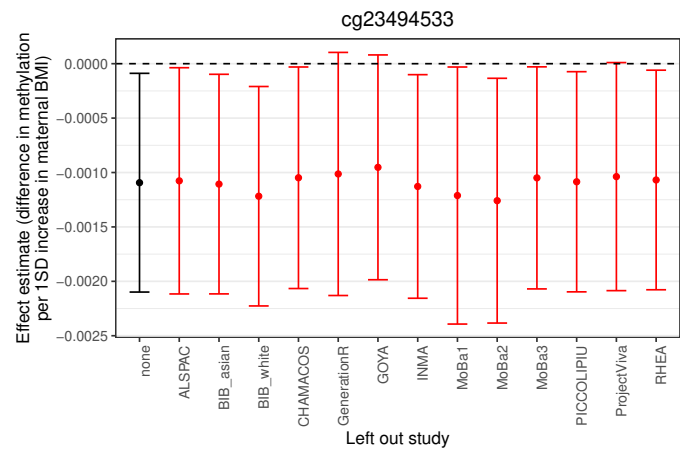

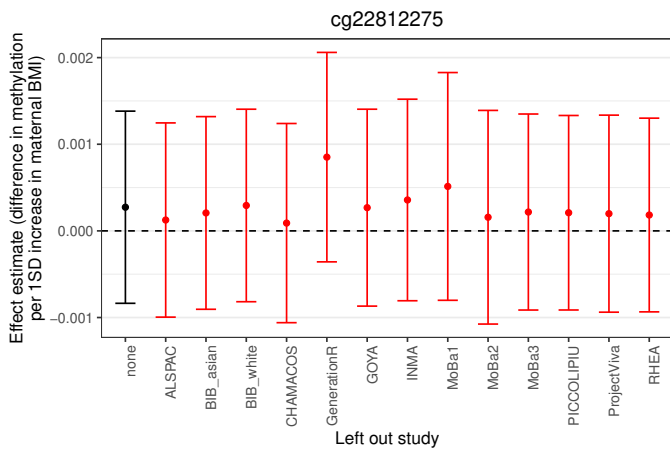

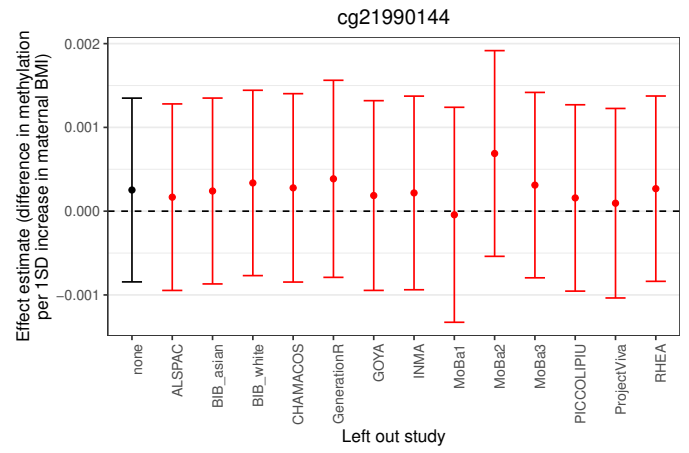

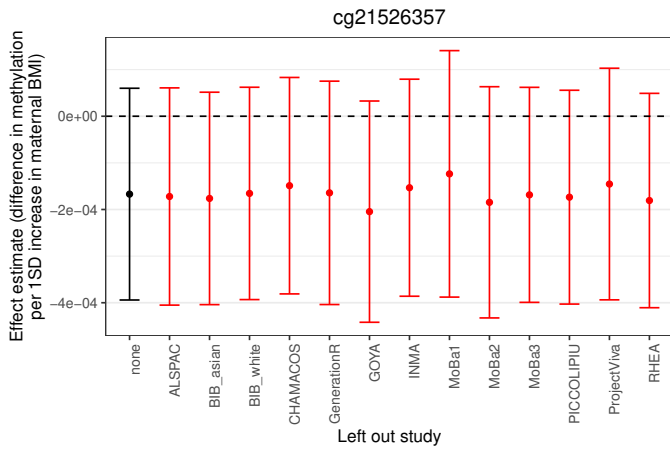

Maternal BMI (adjusted for paternal BMI): pages 22-27

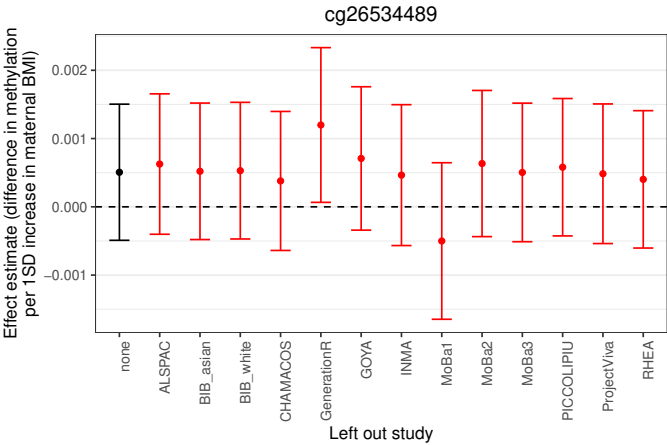

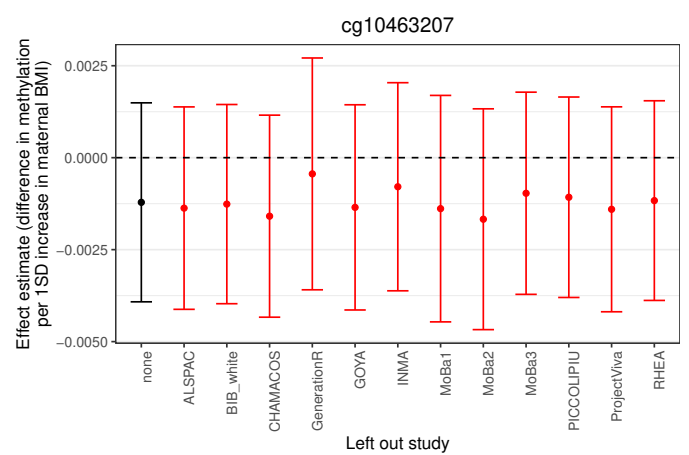

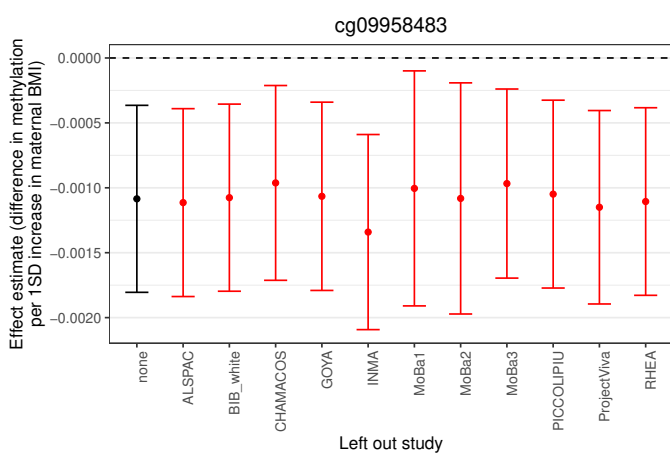

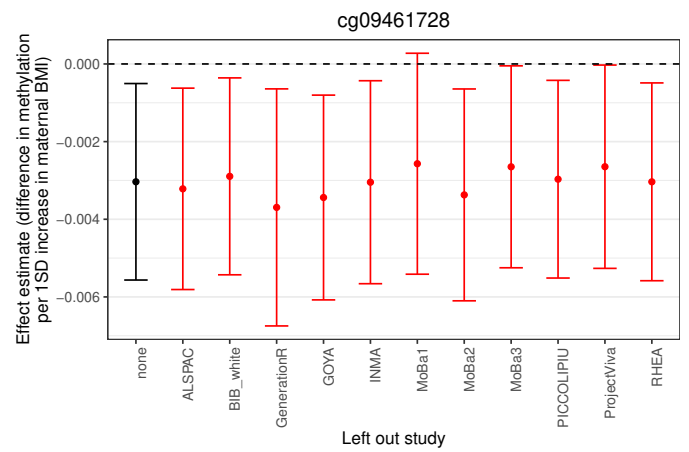

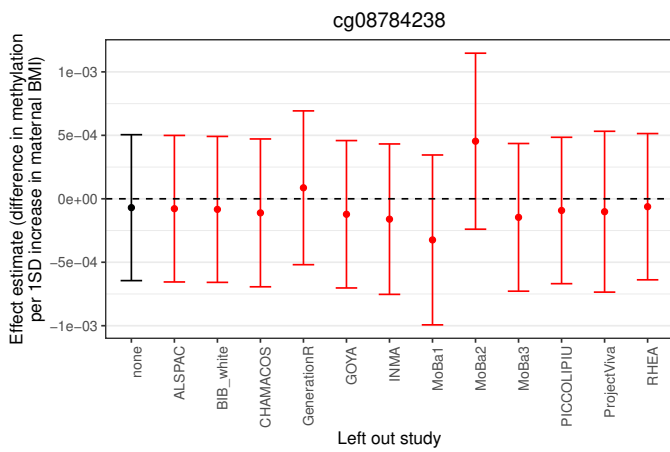

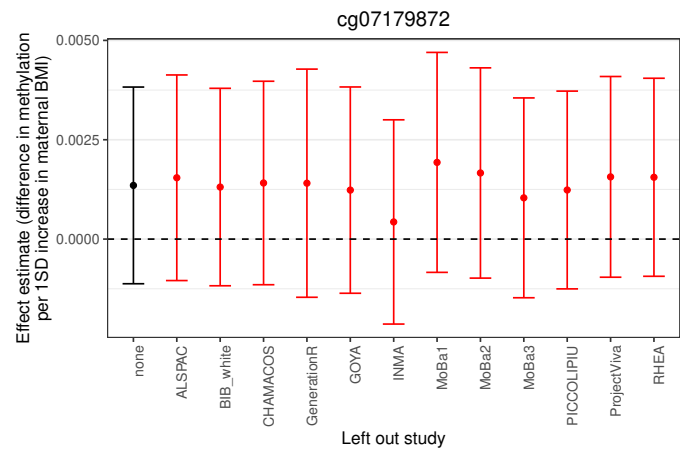

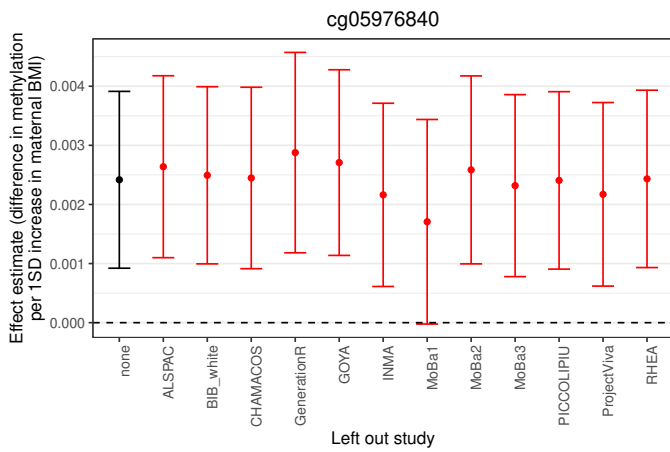

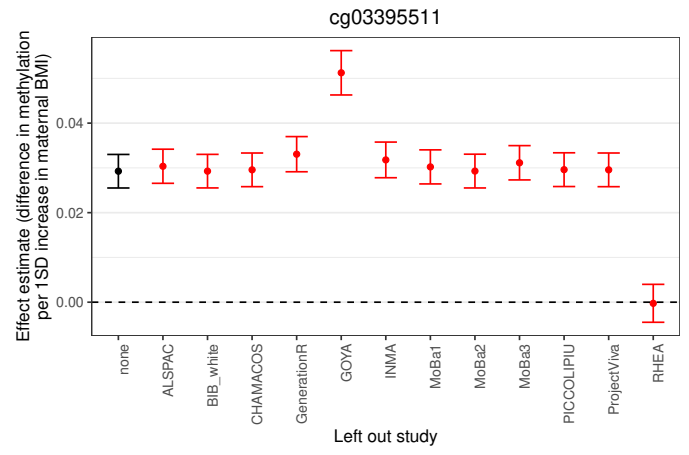

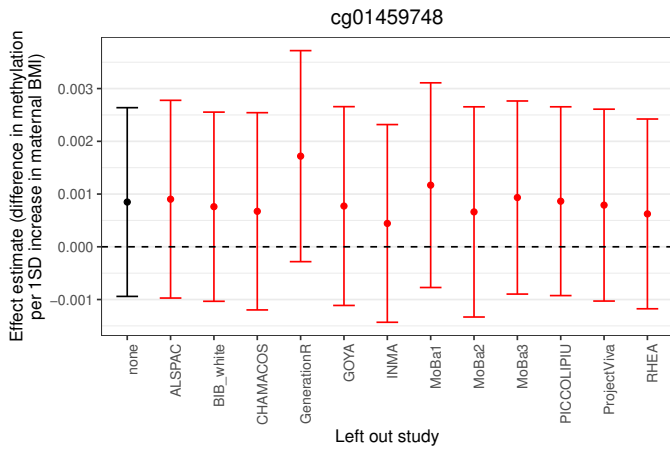

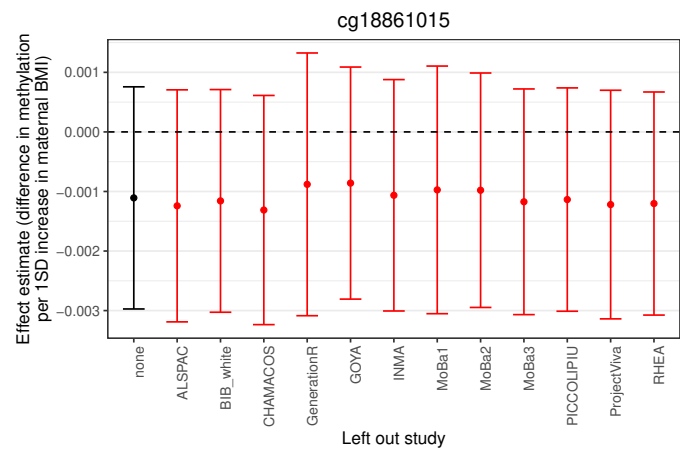

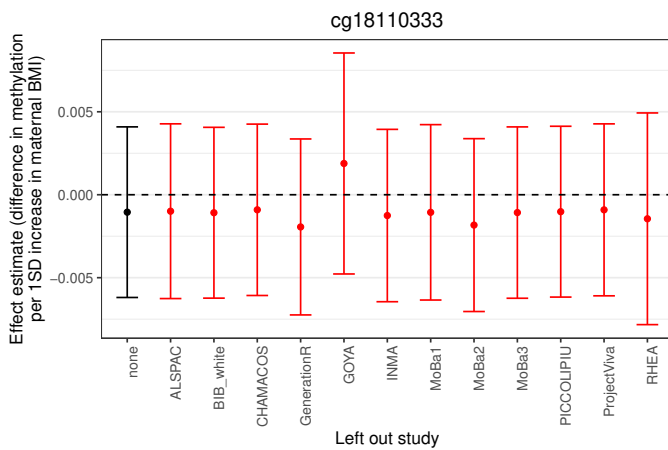

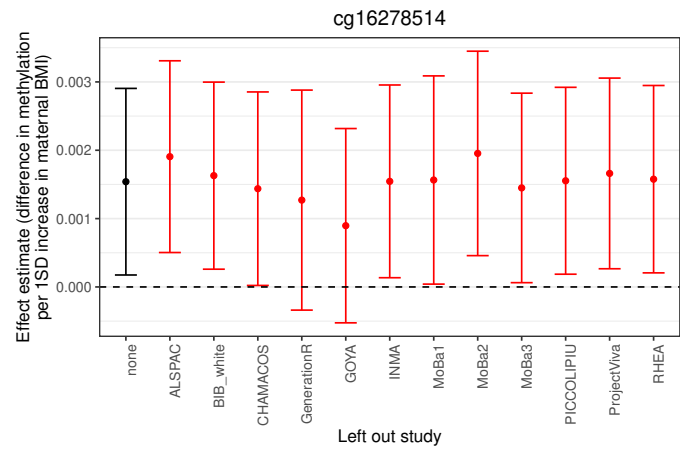

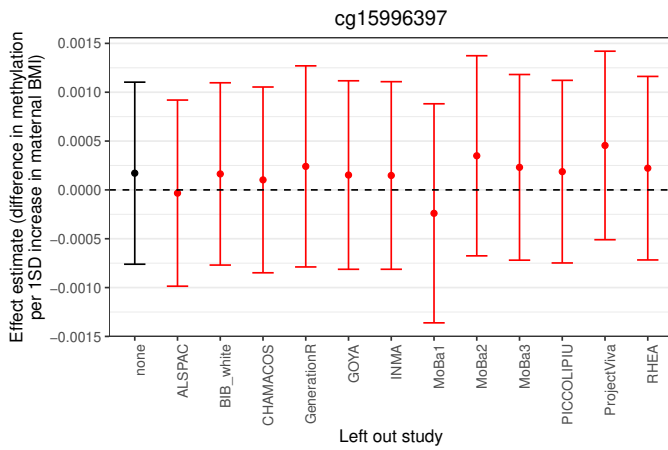

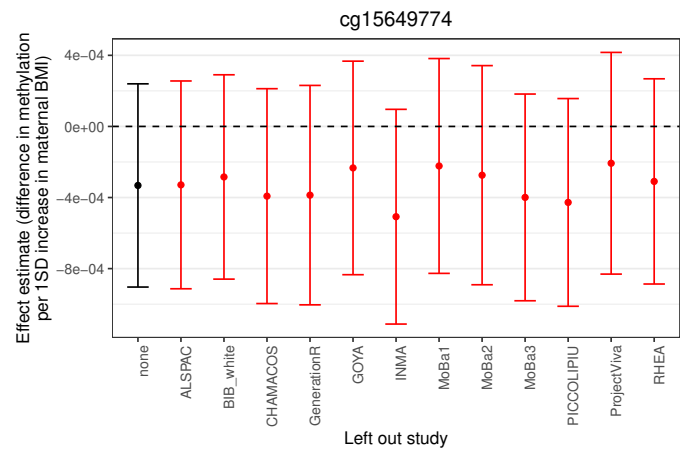

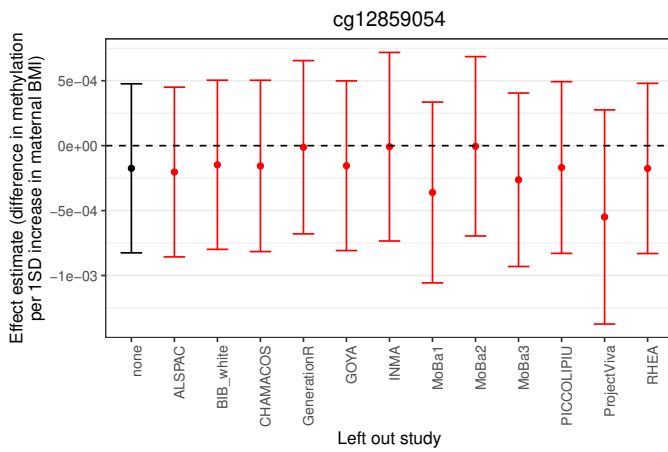

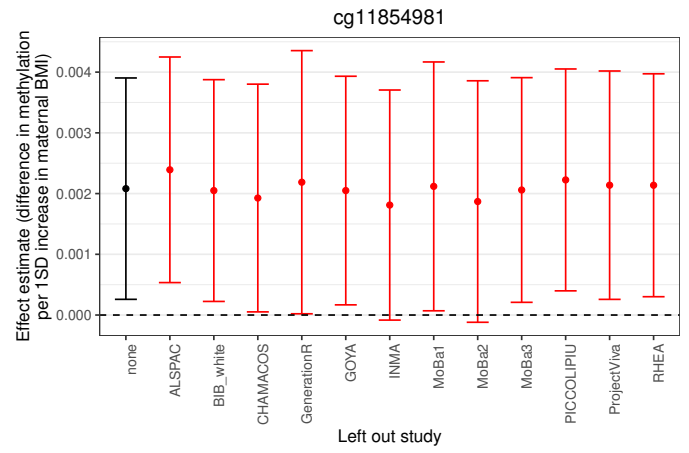

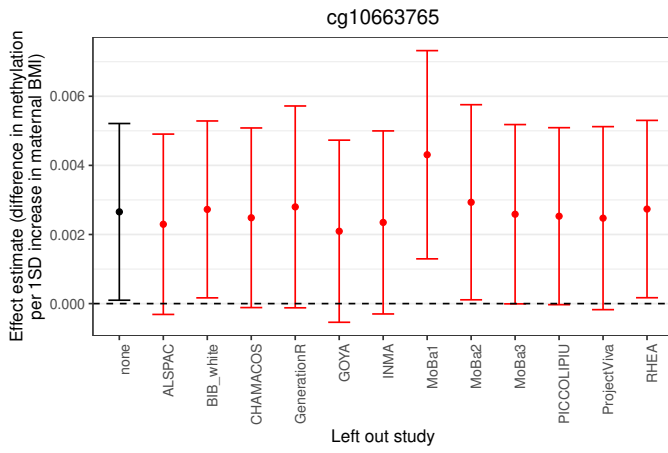

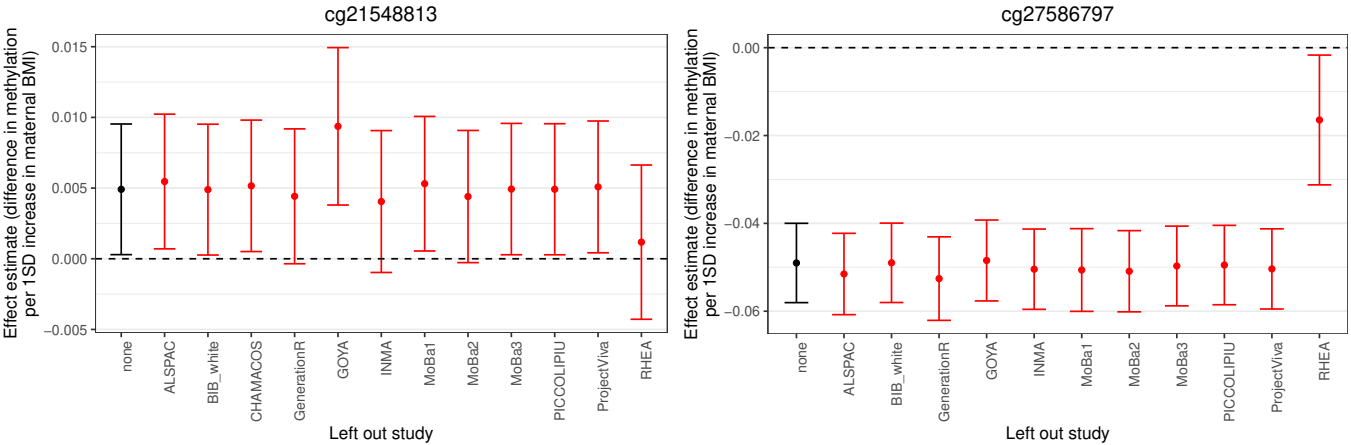

Maternal BMI adjusted for paternal BMI – female offspring
only: pages 29-31

Maternal BMI adjusted for paternal BMI – male offspring
only: pages 33-34
