Explaining variability in the relationship between antiretroviral 
adherence and HIV mutation accumulation

R. S. Braithwaite, S. Shechter, M. S. Roberts, A. Schaefer, D. R. Bangsberg, P. R. Harrigan and 
A. C. Justice

*J Antimicrob Chemother* 2006 58: 1036–43

There are two errors in Table 2 of the above article. The probability of new mutations per month with complete 
adherence and no resistance is 0.014 (not 0.14) for both 
simulations. The Journal would like to apologize for these errors.
