

NIH COVID-19 Data Warehouse Data Transfer Agreement (“Agreement”)

This Data Transfer Agreement ("Agreement") is between the National Center for Advancing Translational Sciences (NCATS) a component of the National Institutes of Health (“Recipient”) and _____ (“Provider”) and will become effective on the date of the last signature below.

The NIH COVID-19 Data Warehouse is an NIH data sharing resource, operated under a contract containing clinical and imaging data from individuals who have received a Coronavirus Disease 2019 (“COVID-19”) test or whose symptoms are consistent with COVID-19. Data will also be collected from individuals infected with pathogens such as SARS 1, MERS, and H1N1 to support comparative studies. Addressing the COVID-19 pandemic requires that researchers, clinicians, and health care providers have available and can make use of all relevant data needed to address this unprecedented crisis. Therefore, this data warehouse will accelerate discovery using near real-time data and observational research, clinical studies and clinical trials, and will bring these data to bear on COVID-19. This solution requires a single computational environment to support public health actions, clinical care, policy, and science underpinning vaccines, prophylaxis, and treatment. The data warehouse is a highly interoperable, secure, clinical data research environment that will harmonize clinical and patient data. The NIH COVID-19 Data Warehouse will serve as a national resource to address the COVID-19 pandemic, as well as demonstrate coordination of clinical and patient data, setting an example for how to approach urgent research needs during future healthcare challenges.

The NIH COVID-19 Data Warehouse is being created by NIH as part of the government response to fight the COVID-19 pandemic and protect the public health. NIH intends to provide access to and use by researchers for public health purposes and decision making, including conducting and supporting research to define the clinical natural history of COVID-19 infection and assess therapeutic responses and outcomes, and conducting and supporting a broad range of studies, including the identification of COVID-19 risk factors and development of effective countermeasures and diagnostics.
