Supplemental Data

Supplemental Figure 4

Figure 4a: Predictors for treatment response on serum cortisol levels

Figure 4b: Predictors for treatment response on salivary cortisol levels
Figure 4c: Predictors for treatment response on ACTH levels

Supplemental figure 4a-c: Linear regression models were used to estimate treatment response of anakinra on changes (delta) in serum cortisol (4a), salivary cortisol (4b) and ACTH (4c) levels before and after treatment of different predefined predictors.
