Supplemental Figure 1:
Comparison of proteins expressed in non-ischemic (left) and ischemic (right) hemispheres of control and RWPC-treated rat brains (A) and representative 2D gel showing the differentially expressed proteins after ischemia and RWPC treatment (B). The spots circled correspond to proteins differentially expressed after ischemia and/or treatment with RWPC that were identified by MALDI-TOF-MS. The identities of these 25 proteins are listed in Supplemental Table 1.
