Supplemental FIGURE 1  Metformin increases the lipid loss response to t10c12 CLA in retroperitoneal fat pads of ML mice. ML were fed diets supplemented with 2.5 g/kg soy oil (Control), or t10c12 CLA (CLA) at either 2.5 or 5 g/kg, and given drinking water lacking or containing metformin (20 mmol/L) for 14 d. One retroperitoneal fat pad is shown for each of the 6 mice for each of the treatments indicated.
