Supplemental Figure 1. Liver of LDLr-KO mice fed TRANS, PUFA, or SAT diets for 16 wk. (A) Hepatomegaly induced by TRANS feeding. (B) Mice fed the TRANS diet developed macrosteatosis (grade 3), and inflammatory infiltrate (grade 2) and NASH-like lesions, while mice fed the PUFA and SAT diets had microsteatosis (grade 1) and a reduced inflammatory infiltrate (grade 1). Masson's Trichrome did not indicate the presence of fibrosis.
