SUPPLEMENTAL FIGURE 1  Deviation (%) of center-adjusted (by age, weight, height, total energy intake and weighted for day of the week of recall and season) mean nutrient intakes from the sex-specific ‘EPIC-means’ among men from Greece (A), Spain (B), Italy (C), Germany (D), the Netherlands (E), United Kingdom (F), Denmark (G), and Sweden (H). The reference circle of the radius (100%) corresponds to the EPIC means and the spikes indicate the deviation of specific mean nutrient intakes from the reference EPIC means. All corresponding values are provided in Supplemental Table 1. MUFA, monounsaturated fatty acids; total carbohydrate = glycaemic carbohydrates including starch and sugar; sugar = sum of mono- and disaccharides; dietary fiber = total dietary fiber defined by the AOAC.
