Supplemental Figure 1. Histologic evaluation of lipid droplets following hematoxylin and eosin staining in liver from rats fed a low-fat (LF) diet or a high-fat (HF) diet containing no green tea extract (GTE) or GTE at 1% (HF+1GTE) or 2% (HF+2GTE) for 8 wk. Representative images illustrate the size and number of lipid droplets (200x). Values are means ± SE, n =15-16/group. Group means without a common letter differ, P≤0.05.
