SUPPLEMENTAL FIGURE 1 Quantitative amounts of representative epoxide eicosanoids in ankle joints of mice infected with *B. burgdorferi* and fed SO- or FO-diet. (A) Levels of 11,12 EET, (B) 14,15 EpETE, and (C) 16,17 EpDPE. Values are means ± SEM, *n* = 4 (d 0 & 10) or 9 (d 21). #Indicates significant differences from d 0, and * indicates significant differences from the SO-fed diet at the same d, (*P* < 0.05).
