Supplemental Figure 4. Histological examination on d 2 (A) and d 10 (B) after challenge with *Streptococcus pneumoniae* performed in lungs of well-nourished mice, malnourished mice, and malnourished mice fed BCD for 7 d that were or were not nasally administered *Lactobacillus rhamnosus* CRL1505. Light micrographs, original magnification X400. In A and B, white arrows indicate hemorrhage and black arrows indicate cellular infiltration. BCD: balanced conventional diet, BCD+Lr: BCD with supplemental *L. rhamnosus*, CAA: conserved alveolar airspaces, MNC: malnourished control mice, RAA: reduction of alveolar airspaces, WNC: well-nourished control mice.
