Supplemental Figure 1. Participant flow diagram.
Supplemental Figure 2. Change in plasma concentration of FRAP after consumption of each test meal in healthy overweight and obese men and women. Values are least squares means ± SEM, n = 15. Post hoc analyses were conducted using the Bonferroni adjustment for multiple comparisons. *Compared to oil, §compared to skin; P <0.05. Ferric reducing antioxidant potential, FRAP; Trolox equivalents, TE.
