Supplemental Figure 2 Intake (A) and liking (B) during the exposure period of basic (RE, \(n = 32\)), sweet (FFL, \(n = 31\)) or energy-dense (FNL, \(n = 32\)) artichoke purées. Infants ran ten exposures (from E1 to E10), two or three times a week. The dotted straight line represents the mean slope across exposures for all groups. Means (± SEM) without a common letter differ. E1 to E10, 1st to 10th exposure; FFL, flavor-flavor learning group; FNL, flavor-nutrient learning group; Mean: centered mean over the 10 exposures; RE, repeated exposure group.
