Supplemental Figure 1. Study Design

SUPPLEMENTAL FIGURE 1. Study design. Eighty male rats were randomized into one of 4 groups: 10% normal protein, milk protein (NP-Milk), 32% high protein, milk protein (HP-Milk), normal protein, soy protein (NP-Soy), or high protein level, soy protein (HP-Soy); each of the 4 diet groups was then maintained in either ad libitum control (AL) or 40% food restricted (FR) conditions.
