Supplemental Figure 1. Acetate and propionate exchange across gut, liver and splanchnic area in human subjects receiving a butyrate or placebo enema during upper abdominal surgery

Acetate and propionate exchange across gut (A and D), liver (B and E) and splanchnic area (C and F) in human subjects receiving a butyrate or placebo enema during upper abdominal surgery. Values are means ± SEMs, n = 5 (placebo) or n = 7 (butyrate). There were no differences between the groups.
