New Postgraduate Course
Introduction to Endocrine Investigations

A sub-committee of the Postgraduate Education Committee, chaired by Dr. Ralph Goldsmith, has developed a new postgraduate course entitled "Introduction to Endocrine Investigations/1987: Techniques and Concepts" to be held November 13–18, 1987 in San Diego, California. This new course is intended for postdoctoral fellows (M.D.s and Ph.D.s) in endocrine training programs, and will provide a sound scientific overview of those techniques currently used in endocrinology research. It will combine many of the factors used in the basic sciences and radioligand courses previously offered by the Society. Thus, the course content will include techniques in cell biology, receptors, molecular biology, separation techniques and immunology. In addition, sessions on grant writing, statistics and computers will be emphasized. The format for this postgraduate course will consist primarily of lectures and workshops, as well as video demonstrations and will include state-of-the-art reviews by leading authorities in the field. Attendance will be limited in order to facilitate maximal interaction among participants. Serono Symposia, USA, is co-sponsoring the course.
