Preventing baker’s asthma

Dear Sir

Dr Smith’s paper on the prevention of baker’s asthma made interesting reading. It demonstrated a thoughtful approach to the protection of workers’ health that appeared to produce good results.

The structured interview conducted as part of the ‘further assessment’ of an exposed employee who gave a positive response to the annual questionnaire was thorough. It included questions about improvement of symptoms away from work as well as about symptoms more obviously associated with work. Of course, this is an important point to make as work-relatedness might only be suggested once improvements are perceived by the employee after fairly long breaks from exposure.

Such a question on improvement away from work should also be included in the annual questionnaire (effectively a screening questionnaire). The paper stated that those who reported a ‘history of symptoms which arise solely at work or are worse at work’ are referred for the further assessment. This approach could miss employees who need further assessment but who do not pass these entry criteria.

I assume that exposed employees are encouraged to report respiratory symptoms at any time, i.e. not just during administration of the annual questionnaire. Someone could develop symptoms soon after the last annual questionnaire was completed and these might not be noted until the next periodic questionnaire.

ASSISTANT EDITORS FOR OCCUPATIONAL MEDICINE

Due to increasing submission of original papers and to further develop our journal, Occupational Medicine wishes to recruit two new assistant editors to complement our existing team. This is an exciting opportunity to actively participate in the running of a vibrant international peer-reviewed scientific journal and to be part of an energetic and enthusiastic team.

As an assistant editor you may be involved in reviewing and editing original papers, commissioning specific articles, writing reviews or short articles, or other journal tasks. You should have good computer and internet skills and Occupational Medicine uses Manuscript Central to process original papers electronically. It is estimated that the average commitment for an assistant editor beyond quarterly meetings is about two to three hours per week.

The editorial team meets in London every three months and you will be required to attend all meetings as far as practical. Travel expenses are reimbursed. Appointment as an assistant editor is subject to the articles of the Society of Occupational Medicine and Occupational Medicine and tenure is for three years in the first place.

If you are interested in playing a part in running a successful medical journal, please send your curriculum vitae with a covering letter to the Honorary Editor, Occupational Medicine, c/o Society of Occupational Medicine, 6 St Andrew’s Place, Regents’ Park, London NW1 4 LB or alternatively you can email your application to Kathy at OMjournal@som.org.uk
