Original Article
Stabilization of Bacillus circulans xylanase by combinatorial insertional fusion to a thermophilic host protein
V. Shah, B. Pierre, T. Kirtadze, S. Shin, and J.R. Kim

Methods
Generation of human bispecific common light chain antibodies by combining animal immunization and yeast display

DDED/N loop and led to improvements resulting in the stabilisation of the point mutation D53N. This mutation (DDED) that was disrupted by a single exposed negatively charged patch model was used to identify a surface model the scFv of antibody Ab001. The structural biology tools were used to MUTAGENESIS. Computational RATIONAL DESIGN AND ANTIBODY EXPRESSION THROUGH protein engineering design & selection
