Figure S3. Termite cox2. Maximum parsimony tree of Termite (Termitidae) cox2. Terminal labels and symbols are as in Fig. S2. A= Microcerotermes sp.1 and M. sp.2 were fused by GMYC, both widespread; B=Nasutitermes nigritus was divided into two GMYC species, one Andasibe-Ranomafana and one in Montagne d’Ambre; C=Copritermes capricornis was fused with C. sp.1 by the GMYC, but were independent species by the multiple-threshold model, one in Andasibe and one in Andasibe-Ranomafana; D=Ancistrotermes sp.1 was subdivided by the GMYC model, with one species in Ankarana and one species widespread.
