SYSTEMATIC ZOOLOGY is published quarterly by the Society of Systematic Zoology. Contributions relating to principles and methodology of systematics, as well as articles concerning evolution, morphology, zoogeography, paleontology, genetics and classification in relationship to systematics, and other papers of general interest to systematists are particularly desired. Taxonomic descriptions, revisions, and keys, or papers on anatomy, physiology, ecology, etc., having little or nothing to do with systematics cannot be accepted. A section called “Points of View” provides a forum for brief discussion of articles that have appeared in this journal or elsewhere. “Reviews” presents discussions of recent books and monographs relating to systematics. “Notices” include announcements of meetings, publications, or other events of interest to Society members.

Preparation of Contributions

MANUSCRIPTS: Authors are requested to follow the recommendations of the Style Manual for Biological Journals (second edition), published by the American Institute of Biological Sciences. To facilitate reviewing, submit the original and one carbon copy of each paper. All parts of manuscripts (text, legends, tables, references) must be typed, double-spaced, with ample margins. Original must be on bond paper; copy may be on thin paper. Avoid footnotes. The complete scientific name of an animal must be given the first time the animal is mentioned. Author should indicate with pencil, in the margins, the approximate positions desired for illustrations and tables. Contributions should be in English; summaries in a modern European language are welcome. Short papers in German, Italian, and French will also be considered, although editorial competence is not ideal in these languages.

ABSTRACTS: Articles other than those submitted for “Reviews” or “Points of View” should be accompanied by an abstract not to exceed three per cent of the length of the article.

REFERENCES: List of literature cited is headed REFERENCES and follows the form indicated in the Style Manual for Biological Journals (p. 79–82). Names of rare or unusual journals should be spelled out fully. Geographic names (e.g., London, California) are not abbreviated. Include number of a periodical only if issues are separately paged. References are cited in the text thus: Jones (1963); (Jones, 1963); (Jones, 1963:25). At the end of the list of references the author should add his address.

TABLES: Tables are typed on separate sheets placed in correct sequence in the text. Since they are expensive to set, they should be limited to those strictly necessary. Avoid vertical lines. Tables made up by the author in the form of line drawings are acceptable.

ILLUSTRATIONS: Illustrative material must be mailed flat, i.e., not folded or rolled. Copies for use of reviewers should be included with original illustrations; copies may be rough but should provide the same information as the originals. Figures are numbered consecutively since they are not ordinarily printed as plates. Illustrations prepared for printing as line cuts are preferred, but those requiring half-tone reproduction are acceptable. Titles, legends, or other headings need not appear on the illustration; captions for figures are grouped according to the arrangement of the figures and are typed, double-spaced, on a separate sheet placed at the end of the paper. Illustrations should be planned to fit reasonably the width of one printed column (2¾ inches) or one page (5¼ inches), allowance being made for captions on full page illustrations. Very large illustrations (more than 15 by 25 inches) are not desirable and are easily damaged in transit. Figure number or inclusive numbers, author’s name, and title of paper must appear on the back of each illustration.

PROOF AND REPRINTS: Authors will receive page proof, together with an order blank for reprints. Since changes in proof are expensive, authors should not expect to make major revisions of their work at this stage and will be charged for alterations exceeding ten per cent of the cost of composition of the paper. Authors wishing cuts or original illustrations returned must notify the editor within one month after article has been published. To avoid delays, authors should keep the editor informed of any change of address.

Manuscripts should be addressed to the Editor, RICHARD F. JOHNSTON, Museum of Natural History, The University of Kansas, Lawrence, Kansas 66044, U.S.A.
