SYMPOSIUM ON PHYLOGENIES AND COMPARATIVE BIOLOGY

Phylogenies and Comparative Biology, Stage II: Testing Causal Hypotheses Derived from Phylogenies with Data from Extant Taxa .................................................. 259
Jonathan B. Losos

Integrating Phylogenetic and Experimental Analyses: The Evolution of Male and Female Nuptial Coloration in the Stickleback Fishes (Gasterosteidae) .................................................. 261
Deborah A. McLennan

Phylogenies and Physiological Processes—The Evolution of Sexual Dimorphism in Southeast Asian Frogs .................................................. 278
Sharon B. Emerson

The Phylogenetic Distribution of a Female Preference .................................................. 290
Alexandra L. Basolo

Parallel Evolution of Nonfeeding Larvae in Echinoids .................................................. 308
Gregory A. Wray

The Triples Distance for Rooted Bifurcating Phylogenetic Trees .................................................. 323
Douglas E. Critchlow, Dennis K. Pearl, and Chunlin Qian

Matrix Correspondence Tests on the DNA Phylogeny of the Tenerife Lacertid Elucidate Both Historical Causes and Morphological Adaptation .................................................. 335
Roger S. Thorpe, Heather Black, and Anita Malhotra

Morphometric Analysis of Old World Talpidae (Mammalia, Insectivora) Using Partial-Warp Scores .................................................. 344
F. James Rohlf, Anna Lay, and Marco Corti

General Inconsistency Conditions for Maximum Parsimony: Effects of Branch Lengths and Increasing Numbers of Taxa .................................................. 363
Junhyong Kim

POINTS OF VIEW

Combining Data with Different Distributions of Among-Site Rate Variation .................................................. 375
Jack Sullivan

The Probabilistic Basis of Jaccard's Index of Similarity .................................................. 380
Raimundo Real and Juan M. Vargas

A Further Note on Symmetry of Taxonomic Trees .................................................. 385
Donald H. Colless

BOOKS RECEIVED .................................................. 391

ANNOUNCEMENTS .................................................. 392

Cover Illustration: Parallel switches in larval nutrition have resulted in extensive parallelisms in larval morphology within the sea urchins (Echinodermata: Echinoidea). Phylogenetic analyses of larval morphology highlight the degree of convergence in larval form and suggest a model for its origin. (See Wray, pages 308–322.)
