Supplemental Figure 1.

*Hepatocellular Localization of Abcg2.* Immunohistochemical staining for Abcg2 was performed according to the MACH4 method (Biocare Medical, Concord, CA) as described previously(1), with the mouse monoclonal antibody BXP-21 (Kamiya Biomedical Company, Seattle, WA) incubated overnight at 4°C. Representative images in C0 and M0 liver is shown, 20X objective magnification. Positive Abcg2 staining (arrows) is properly localized to the canalicular membrane in both control and NASH rodents.
