Supplementary Figure 2: Alignment of conserved helicase domain of the genome of *Culex pipiens* Associated Tunisia Virus (344 aa). Taxon names are virus acronyms. Similarity in amino acids alignments is represented by shades of black (100% in black, 80% in dark gray and 60% in light gray). Arrows indicate sequences of CpATV. Conserved motifs I to VI as defined by Koonin and Dolja in 1993 are indicated above sequences (73). Sequences details and GenBank accessions numbers are available in Supplementary Table 2.

Supplementary Figure 4: Alignment of conserved capsids domains of the genome of *Culex pipiens* Associated Tunisia Virus (218 aa). Taxon names are in acronyms. Similarity in amino acids alignments is represented by shades of black (100% in black, 80% in dark gray and 60% in light gray). Arrows indicate sequences of CpATV. Stars indicates the conserved residues as defined by Koonin and Dolja in 1993 which form a functionally important salt bridge (R(+) - E(-)) (73). Sequences details and GenBank accessions numbers are available in Supplementary Table 2.

Supplementary Figure 5: RT-PCR detection of CpATV in wild *Culex pipiens* samples from Ayed and Jedaida populations. A) Detection of *C. pipiens* ace-1 gene by RT-PCR for cDNA quality control. B) CpATV detection resulted in 3 positive samples in Ayed population (samples Ayed_15, 16 and 19), all other samples from Ayed or Jedaida samples were negative. L1: 100 pb DNA Ladder (Jena Bioscience), L2: 100 pb DNA Ladder (Euromedex), Cp: *Culex pipiens* genomic DNA, T-: Ultrapure water.
